CARR McLEAN, TORONTO FORM #38-297

President's Message

Dear Students

I would like to take this opportunity to welcome you to BCIT. I am confident you will find your studies challenging, and the curriculum current and relevant to the field you have chosen.

As stated in our Mission Statement: "BCIT's mission is to be an innovative, flexible training institution for trades and technology that promotes and achieves excellence in technology transfer through the provision of relevant, job-related knowledge, skills and attitudes, and development assistance for business and industry."

We have a dedicated group of instructors, support staff and management who will do their utmost to ensure that the education you receive at the Institute will fully prepare you for entrance into your chosen career.

You will find the Student Association active, energetic and dedicated to making your time at the Institute as enjoyable as possible.

I hope to have the opportunity of meeting you during your time with us and wish you every success in your studies.

Sincerely,

Roy V. Murray, P.Eng.
President

General Information

Campus Locations

1. Burnaby, Main Campus — Full-time and part-time technology and trades courses and programs

3700 Willingdon Avenue
Burnaby, B.C.
V5G 3H2
434-5734 (Campus switchboard)

Important telephone numbers:

Program Advising:434-3304
Counselling:434-3304
Financial Aid and Awards:432-8555
Admissions — Full-time Programs:432-8419
Registration — Part-time:434-1610
Student Records:432-8478

Office hours for most departments are 0830 to 1630, Monday to Friday. Admissions office hours for general enquiries are 0830 to 1330 Monday to Friday; after 1330, enquiries should be directed to the Registration Office.

Office hours for registration and general enquiries — From late August to early December and early January to late April.

0830-2030 Monday-Thursday
0830-1630 Friday
0830-1230 Saturday (except holiday weekends)

2. Downtown Education Centre — Part-time studies technology courses only

549 Howe Street
Vancouver, B.C.
V3C 2C6
687-4666

Office Hours — when school is in session

0830-1830 Monday-Thursday
0830-1630 Friday

Otherwise 0830-1730 Monday-Friday

3. Surrey — Part-time studies technology courses only

Princess Margaret Senior Secondary School
12870 72nd Avenue
Surrey, B.C.
V3W 2N1

NOTE: While the Burnaby main campus and Downtown Education Centre offer year-round registration service for part-time studies courses, the Surrey location has limited registration services. Please see our advertising supplements for registration and course details for this location.

4. Coquitlam: Part-time studies technology courses only.

Coquitlam College
1100 Winslow
Coquitlam, B.C.
V3J 2G3

NOTE: While the Burnaby campus and Downtown Education Centre offer year-round registration service for part-time studies courses, the Coquitlam location has NO registration services. Please see our advertising supplements for registration and course details for this location.

5. Sea Island — Aviation courses and programs only

Vancouver International Airport (South)
4440 Stark Street
Richmond, B.C.
V7B 1A1
278-4831

Personal Data

It is the student's responsibility to ensure all personal data on file with the Registrar's Office is accurate.

Refund Deadline

It is the student's responsibility to check the refund deadline dates. This information may be obtained in the Registrar's Office.

1200 - 12:00 noon	

AIDS Policy

It is the policy of BCIT that there shall be no discrimination against any person at BCIT known, or suspected to have AIDS or to be infected with HIV (AIDS virus). BCIT's Medical Services Department will develop a clear set of guidelines for assisting its staff and students to understand and deal with the appropriate handling of bodily fluids. BCIT will not insist on mandatory blood testing for the AIDS antibody. While BCIT's policy does not require mandatory testing for AIDS, it should be recognized that BCIT has no control over the policies of external agencies employing BCIT students and/or graduates.

If an employee's or student's health status deteriorates because of AIDS and if his/her condition indicates alternative or special arrangements, the individual will be treated in the same manner and with the same confidentiality as any other person with a serious illness.

Clean Air Policy

It is the policy of the British Columbia Institute of Technology that a smoke free environment be provided for employees, students and visitors. Smoking is, therefore, restricted to specially designated areas throughout the Institute.

Conduct and Attendance

It is assumed that all students enrolled at the British Columbia Institute of Technology are interested in pursuing an intense program of studies and that they are prepared to conform to all regulations.

1. Students are expected to conduct themselves in exemplary fashion at all times and pay diligent attention to their studies. If the School Dean or the Registrar believes a student's conduct is such that it is detrimental to the interests of the Institute, a recommendation may be made to the President to exclude the student from further attendance. The President has the final power to suspend or expel a student for disciplinary reasons, subject to the student's right to appeal this decision to a committee designated by the Board of Governors. A student who has been expelled or suspended for misconduct will not be admitted to the Institute grounds or buildings.
2. Acts of cheating, plagiarism and dishonesty will not be tolerated by this Institute, and the degree of punitive action may range from a written warning, to a withdrawal from the program. These penalties may also be applied to students who knowingly contribute to the act of dishonesty, cheating and plagiarism.
3. The Institute is not responsible for debts incurred by student organizations.
4. If through carelessness or negligence, a student damages Institute property, the student will be held responsible. If the damage is caused by students whose names are not known, the cost of repairing the damage may be assessed equally among all students enrolled at the Institute.
5. A student will not be permitted to borrow or remove any apparatus or tools except by written authority of the President or his delegate.
6. General supervision over all forms of entertainment given under the auspices of a student organization comes under the jurisdiction of the President.
7. It is the policy of BCIT to rely on the judgement of students to maintain a reasonable standard of dress and

appearance. The choice of dress is left to the individual student, subject to the following considerations:

- (a) in some field trips and laboratory situations, safety considerations require that special head gear, shoes or other clothing, and other safety equipment must be worn;
- (b) where programs involve regular periods of scheduled experience, in industry or hospital for example, the student may be required to wear a uniform or otherwise dress himself/herself in the appropriate manner acceptable to the affiliating agency.

Based on experience to date, BCIT faculty believe that there is a positive relationship between general dress standards and employment of graduates. Faculty are prepared to advise students in the area of acceptable attire.

8. Regular attendance in lectures, seminars and laboratory periods is required of all students. If a student is absent for any cause other than illness for more than 10% of the time prescribed for any subject, he/she may be prohibited from completing the course. In case of illness or other unavoidable cause of absence, the student should communicate immediately with his department head, stating the cause of absence. Special regulations governing attendance in clinical experience areas are prescribed by the School of Health Sciences.

Due to the nature of Trades Training, regular attendance is critical for successful completion. Students failing to report absences to their departments, for five or more consecutive days, may be prohibited from completing the program.

9. Computer Ethics

"Code of Ethics" on Access to Computer Resources at the British Columbia Institute of Technology

In the following statement, a "user" is any person who makes use of any computer owned or operated by BCIT. A "password" is a code word or number which identifies a user to a computer; that is, knowledge of a password which is recognized by a particular computer allows a person to use that computer (just as knowledge of the correct combination allows one to open a safe).

Access to BCIT computer equipment is authorized only for those persons doing work for which that equipment was acquired. Users should be guided by the following:

- a. Do not attempt to discover other users' passwords, or to use any password discovered by chance. Take all reasonable precautions to prevent anyone from discovering your password. Report immediately any suspected "leak" of a password so that it may be changed. (Where two or more persons use the same password, which may be necessary on group projects, all those persons share responsibility for that password.)
- b. Do not attempt to discover or change any user's charges.
- c. Do not attempt to read or copy any information stored on the computer system unless explicitly authorized to do so. This includes information which has been stored by Computer Resources, by other computer users, by a commercial vendor or by any other party.
- d. Do not knowingly consume excessive resources.

- e. Do not use Institute computer facilities for non-institutional projects, or for personal or commercial purposes, unless written authorization has been received from the Information and Computing Committee.
- f. Do not move any computing equipment, and be extremely careful to avoid damage.

Users of the computer systems are cautioned that violation of the above rules may disrupt service to themselves and others. Furthermore, it could violate a copyright or other non-disclosure agreement into which BCIT has entered.

Computer Resources staff who have access to information owned by users of the system will treat all such information as strictly confidential.

Office of the Registrar

This office is the Administration centre for all the related activities of the Registrar's office. It directs its efforts towards coordinating the major functions of Registration, Admissions processing, and Records keeping. The personnel in this office are part of a major link in the policy setting and implementation process of the Institute between the Administration, the Deans and the students, particularly as they relate to the student's progress through the Institute, from initial application to the final graduating ceremonies. Students may also utilize this office in the case of an appeal or re-assessment of the marks process. Most of the enrolment statistics published by BCIT are developed by this office. The office has two student information/ registration systems. ISIS (for all technology and part-time students) and SRS (for all trades students).

Registration

This area is the Institute's first public contact and maintains a high profile for the Institute. This office handles all general information enquiries and accepts applications for Trades/Technology programs. Part-time students also register here: over the phone, in person and through the mail. Other activities include processing incoming mail and mailing out information. Office hours are from 0830 to 2030 Monday through Thursday, 0830 to 1630 on Friday, and from 0830 to 1230 on Saturday (except on long weekends).

Admissions

This department accepts and processes applications for full-time Trades and Technologies, and for part-time Electronics Technology as well as handling enquiries about applications. Office hours for admission enquiries are 0830 to 1300, Monday to Friday. From 1300 on, enquiries should be directed to the Registration desk.

Records

This office maintains all student files, both full-time and part-time; updates all student file and transcript information; processes all marks and issues transcripts, full and part-time; processes verification of attendance letters, loan documents; issues class lists, T2202A forms (Tax Deduction Certificates); assesses students for eligibility to graduate and assists with Convocation; orders and issues all Certificates and Diplomas. It is responsible for academically successful students to be forwarded into their next terms. It processes course credit exemption applications and transfer credit applications for all students. Office hours are 0830 to 1630, Monday to Friday.

Timetabling

The Timetabling Department produces the Institute's master timetables, including those for full-time technology programs, part-time trades and technology programs and full-time technology examinations. It handles day to day room bookings for meetings and other events.

BCIT Services

Student Services

The Student Services reception area for Program Advising, Counselling and Financial Aid and Awards is located at the northwest corner, 2nd floor, Building 1A. Our offices are open from 0830 to 1630, Monday to Friday. For telephone enquiries, please call 434-3304.

Staff

Val Karpinsky, B.A.(Hons.), Director, Student Services
Vibeke Jose, Clerical Support
Sandie Mooney, Secretary
Muriel Shaw, Clerical Support

Program Advising

Program advisors provide information, through an interview process, about programs, learning opportunities and career opportunities for full and part-time studies.

Program advisors assist students in considering program choices and ultimate training programs; provide information about skill requirements and occupations, including Career Resource Centre resources. Students with undefined goals are referred by program advisors to counsellors for career planning. Program advisors acquaint students with institute/campus services and facilities and also participate in Secondary School Liaison visits.

Program advisors may be seen on a drop-in basis or by appointment, in addition to telephone enquiries. We look forward to hearing from you by Telephone — 434-3304, by mail, or in person in Student Services, 1A Building, 2nd floor. Students outside the Lower Mainland may reach us by using the **HOT LINE** 1-800-242-0676.

Program Advisors

Raelene Rowe, B.A., Coordinator
Pat Awarau, B.A.
Anne Bullinger
Sheri Dawson, B.A.
Mandy Klepic, P.D.P.
Ann McNaughton, Cert.

Program Advisors — Part-time Studies

Chris Lloyd, Dipl.T., Business Part-time Studies
Katie Pelletier, B.Ed., M.R.E., Engineering Technologies & Trades, Part-time Studies

Career Resource Centre

Located in Student Services, 2nd floor, 1A Building, the Career Resource Centre will help you with career planning, occupational information, educational and training information, and student life. Video/slides/tapes of career programs are also available. You may come in to browse through our material or to view career information. The Centre is open from 0830 to 1630 weekdays. Our program advisors are there to answer your questions and our career counsellors are available to help you develop your plans.

Counselling

Counselling Services offer a free and confidential career counselling service to all current and prospective BCIT students. Professionally trained counsellors will assist students in selecting a career, making a career change, re-entering the work force, or adjusting a career to fit a chosen lifestyle. In addition, group information sessions regarding Health, Business and Engineering career options are offered on a regular basis. Contact Student Services reception for details.

Current and prospective students are invited to drop in to the Career Resource Centre in the counselling office to view slide and tape presentations of various BCIT trades and technologies, or to pick up brochures on each trade and technology. There are reference materials to assist you in your educational and lifestyle planning as well as calendars from other Canadian and U.S. post-secondary institutions and universities. There is also a special section devoted to women's issues.

Counselling Services, in conjunction with Part-time Studies, offers several Career Search Workshops during the school year. These workshops are four sessions (12 hours) long and are designed primarily for prospective students who have been in the work force at least two years. Participants examine their career paths and lifestyles in terms of direction and personal satisfaction. Registration for Career Search Workshops is handled through Part-time Studies at 434-1610.

BCIT students may receive assistance in overcoming blocks to successful educational performance to optimize learning efficiency and effectiveness. Supportive counselling to BCIT students during times of stress or change is also available through Counselling Services. It may take the form of direct service to the student or referral to the appropriate campus service or community agency.

The Special Needs Counsellor provides persons with disabilities and special needs with career, educational and personal counselling assistance. The Special Needs Counsellor also coordinates services for these students and facilitates their participation in training.

Group Workshops for BCIT students are offered from time-to-time throughout the year. Workshops include out-of-towner and adult-returning-student orientation, time management, stress management, coping with test anxiety, exam preparation and introduction to assertiveness.

For further information about Counselling Services at BCIT, contact Student Services reception in Building 1A, 2nd floor, or telephone 434-3304.

Financial Aid and Awards

The most important point to remember when considering educational finances is to plan ahead. For this reason you are urged to investigate the financial assistance programs available and explore other options, well before the start of a new school year.

How Much Will It Cost

The first step in determining your total financial picture is to calculate resources and expenses. In addition to tuition fees and book/supply costs, single students not living with their parents can expect to spend approximately \$700.00 per month on living expenses. It is important that costs such as rent, food, utilities, transportation, clothing, laundry and entertainment are taken into account. To estimate total resources, you should consider such items as savings, parental contribution and part-time earnings while attending school.

If your estimated expenses exceed your total resources, please consider the following programs and services available at BCIT. Note: These programs and services are subject to change.

B.C. Student Assistance Program

This government sponsored program is the major source of financial assistance for post-secondary students. It includes three types of assistance: Canada Student Loans; B.C. Student Loans; and Equalization Payments. The maximum assistance a student is eligible for varies according to program length and whether a student is single, married or has dependents. Based on 1987/88 guidelines, the maximum available for a single student or a married student without children is as follows:

PROGRAM YEAR LENGTH (WEEKS)	CANADA STUDENT LOAN MAXIMUM	B.C. STUDENT LOAN MAXIMUM	TOTAL LOAN MAXIMUM
13	\$1365	\$ 855	\$2220
17	\$1785	\$1115	\$2900
22	\$2310	\$1450	\$3760
30	\$3150	\$1980	\$5130
34	\$3570	\$2230	\$5800
39	\$4095	\$2565	\$6660
43	\$4515	\$2835	\$7350
52	\$5460	\$2190	\$7650

The maximums for single parents and married students with children are slightly higher. **Please note:** These figures are maximums — the amount a student actually receives is determined by an assessment of their financial circumstances. Students who require funds at the beginning of the program/year should apply at least 3 months before the start of classes.

Work Study Program

The Work Study Program is a government sponsored program designed to provide on-campus, part-time work for students in financial need. This program is intended for students whose financial needs cannot be fully met by the B.C. Student Assistance Program, or for those who wish to reduce the amount of their student loans. Many of the positions provide career related work experience, and the hours are generally flexible so as not to interfere with classes. Positions are posted at the Canada Employment Centre beginning in September.

BCIT Bursaries

BCIT bursaries are non-repayable awards ranging from \$100 to \$1,000. They are made possible through contributions from private companies, organizations and individuals to the BCIT Scholarship and Bursary Fund. A description of available bursaries can be found in the booklet "BCIT Student Awards and Financial Aid", copies of which may be obtained from the Student Services Reception desk.

To be considered for a bursary, students must demonstrate financial need and have satisfactory academic standing. In some cases consideration is also given to the student's contribution to BCIT and/or the community. Technology students cannot apply for a bursary until they have successfully completed one term at BCIT. An application must be submitted with the normal deadline being the third week in January. Trades students must also complete an application to be considered for bursaries. The deadline is the 29th of each month.

BCIT Technology Scholarships

Based on first year performance, scholarships are presented to full-time technology students entering second year. Presentations are made at the October Scholarship Ceremonies. These awards are automatic with no application necessary. A complete list of scholarships can be found in the BCIT Awards and Financial Aid booklet.

Emergency Loans

Short-term, interest-free emergency loans are available, in some circumstances, to assist students in meeting essential living and educational expenses. Students are expected to have exhausted all other possible financial resources, including family loans, before being considered for an emergency loan. These loans are normally granted to students who are able to repay them from a specified source within a short time period.

For further information, telephone 432-8555 or visit the Student Services Reception desk located at the northwest corner, second floor, Building 1A. Hours are 0830 to 1630, Monday to Friday.

Staff

Graduating Awards

Honor Awards

The following Honor Awards are presented at convocation.

The **Governor General's Silver Medal** is presented to the top academic student in a Technology Diploma Program. Graduates from the previous August Nuclear Medicine class are also considered, as are August and December graduates from the Electronics Technology and December graduates from Nursing.

The **Lieutenant Governor's Silver Medals** are awarded for academic excellence and contribution to both the Institute and the community at large. Two are presented each year, one to a Trades program graduate and the other to a graduate of a Certificate Program.

The **Board of Governors' Citizenship Award** is presented to the graduating student who has a record of active participation in student activities, a reputation for mature personal relations with both staff and students, and reasonable academic standing.

The **President's Award** is presented to a student who has demonstrated outstanding leadership and service to peers, faculty and staff and who has achieved at least a second class standing.

The **Dean's Awards** are presented to the most outstanding academic students in each of the three Schools: Health Sciences, Business, Engineering Technologies and Trades.

Academic Awards

Academic Awards are presented annually to students who achieve the highest academic standing in their program of studies. The following awards were presented at the June 1987 Graduating Awards Ceremony.

School of Business

Administrative Systems

The Bank of British Columbia, Division of the Hong Kong Bank of Canada, Award in Administrative Systems
The Personnel and Industrial Relations Administration Award
The Business Administration Double Diploma Award
The Vancouver Transportation Club Award in Transportation and Distribution Management
The Bank of British Columbia Award, Division of Hong Kong Bank of Canada, in International Business
The Operations Management Award

Broadcast Communications

The British Columbia Association of Broadcasters Award

Financial Management

The Society of Management Accountants of British Columbia Award in Accounting
The Royal Bank Finance Award

Hospitality Administration

The British Columbia Hotels' Association Award in Hotel, Motel and Food Service Management

Tourism and Marketing Management

The Real Estate Council of British Columbia Award in Real Estate Studies
The Vancouver Sun and Vancouver Province Award in Technical Sales and Marketing

The Ryan Schlyecher Memorial Award in Travel and Tourism
The Canadian Tire Award in Advertising and Sales Promotion

School of Engineering Technologies and Trades

Biological Sciences

The B.C. Federation of Agriculture R.B. Stocks Award in Agriculture Management
The B.C. Nursery Trades Association Award in Landscape Horticulture
The Crop Protection Institute of Canada Award in Food Production
The Fisheries Council of B.C. Award in Food Processing

Building

The Architectural Institute of British Columbia Award in Architecture
The Building Award in Economics

CAD/CAM

Intergraph Systems Limited Award

Chemical Sciences

The Canadian Institute of Mining and Metallurgy Award in Extractive Metallurgy
The Canadian Pulp and Paper Association Award
The Canadian Society for Chemical Technology Award in Organic Chemistry

ing

School Award

The BCIT Alumni Award

International Education

Life at BCIT has acquired an international flavour with the increasing enrolment of international students. This year BCIT is host to nearly 90 students from other countries. The presence of international students on campus provides an excellent opportunity for intellectual and cultural interaction.

The International Education office provides services to international students at BCIT and coordinates other international activities at the Institute. The office is located in Trailer 2G, just north of the bookstore.

Telephone: 432-8475

Cooperative Education Government and Industry Liaison

Martin Hendy, Ph.D., Director. Telephone 432-8590
Kerry Jothen, M.A., Coordinator, Government and Industry
Liaison. Telephone 432-8471
Valerie Perkio, Associate Ed., Coordinator, Cooperative Edu-
cation. Telephone 432-8499
Gino Simeoni, M.Ed., Coordinator, Cooperative Education.
Telephone 432-8291

Government and Industry Liaison

One of the aims of this office is to increase the responsiveness of the Institute to government and industry in general. More specifically, the office acts as a focal point and will either give information or make a referral to the appropriate person(s). It promotes BCIT programs and services to government and industry; identifies and assists in accessing government funding for industry and BCIT departments; and promotes Institute/gov-
ernment/industry collaboration.

Cooperative Education

Cooperative Education is a plan of education which integrates paid work experience with academic studies. The name reflects the cooperative relationship between BCIT, students and employ-
ers. The employment relates to the student's field of study.

BCIT currently offers cooperative education to technology stu-
dents in Electronics, Robotics and Automation, and to trade stu-
dents in Horticulture. In 1988 new coop programs will be added in the trades as follows: Aviation (Aircraft Maintenance Mechan-
ic & Avionics Technician); Industrial Maintenance Mechanic; Tool
& Die Technician. See diagrams for work study sequences. Programs in other technologies and trades are being consid-
ered. For more information contact the Director.

Many students take jobs to finance their education but often the job is no more than a means to that end. In addition to helping students finance their education, cooperative education allows students to explore their career choices in a structured and pur-
poseful manner. It gives them the opportunity to test skills and knowledge learned on campus, to adjust to the world of work, to acquire relevant experience as well as an education.

Operation of the Plan

Responsibility for the operation of the plan rests with the Coop-
erative Education Coordinators. They meet employers to establish and maintain jobs and determine future requirements for students. They counsel students, deal with any problems which may arise, and liaise with faculty members from the academic departments who visit students on the job and eval-
uate the reports submitted at the end of work semesters.

Admission to the Cooperative Program

Cooperative education at BCIT is selective. Selection is based upon academic performance and an interview. At the interview such factors as motivation, inter-personal and communication skills are checked. To enter and to continue in a cooperative pro-
gram a student must have met criteria specific to the program. For example, in the technologies, a student must normally have a cumulative grade point average of 60% and no more than one failed course up through level two. Students in technologies should make application for admission to the Cooperative Pro-
gram at the beginning of their second study level. Transfer stu-
dents, especially those transferring from other cooperative pro-
grams, should consult the Director at the earliest opportunity.

Under Canada Immigration regulations relating to employment, only Canadian citizens and permanent residents are eligible to enter a cooperative education program.

WORK STUDY SEQUENCE — TECHNOLOGIES

Program	Track	Year 1			Year 2			Year 3		
		SEP JAN	JAN MAY	MAY SEP	SEP JAN	JAN MAY	MAY SEP	SEP JAN	JAN MAY	MAY SEP
Electronics	1	S1	S2	W1	S3	W2	W3	S4

Aircraft Maintenance & Avionics	1	S1	S2	W1	S3	W2	S4

Key S1 = 1st study level or term
 W1 = 1st work term
 H = holiday or non-coop job

Note: These diagrams are for 1988 only and are subject to change.

The diagrams show the alternating pattern of work and study required in cooperative education programs at BCIT. In technologies, each work term is of 12 to 20 weeks duration; in trades the work terms vary from 6-17 weeks duration. Vacation time for students between work and study will vary according to personal choice and by arrangement with the employer.

The Job Competition

The job competition takes place during the second half of the study period prior to the work term. Initially, employers indicate the number and type of students required and provide job descriptions. These job descriptions are displayed for cooperative education students who may apply for up to ten interviews, selecting the opportunities that offer the type of experience they are seeking.

Applicants' resumes and academic records are sent to employers who may then elect to interview all or some of the applicants. After the individual interviews, which are normally held on campus, employers prepare a list in order of preference of students who are acceptable for the job. Students also state their order of preference for the employers with whom they have had interviews. These two sets of choices are combined to effect the best possible match of employers and students.

The Institute then contacts employers informing them of the students obtained through the selection process. Students then write confirming their acceptance of employment and include any details that they may wish to discuss in advance of reporting for their jobs.

Registration in a cooperative education program at BCIT commits students to the acceptance of employment either through the regular job competition or, where it would be to a student's advantage, on an assignment that their coordinator may determine. Students with a job available to them outside this procedure must have the job evaluated by their coordinator. All positions held by students must be approved by the Director of Cooperative Education.

By registering in a cooperative education program, technology students give permission for the release to prospective employers of copies of their academic records and, when applicable, previous employer evaluations.

Under the procedure described above, there may be some students who do not secure a job and some employers who do not obtain students. In such cases the Institute makes every effort to place these students and to satisfy the employers where the best interests of each can be served.

Cooperative education technology students are expected to return for a second work term when acceptable to employers. Second work terms provide students with an opportunity for better assessment of the employer and provide employers with the benefit of increased productivity. In most instances, the second work term also offers students some new duties and responsibilities. Valid reasons for exceptions to this rule will be considered by the Coordinator. Additional work terms are a matter of mutual agreement between employers, students and the Coordinator.

Pay Rates

Rates of pay for cooperative education students are determined by employers within their own wage or salary structures. As students progress through their programs and assume more responsibility on work assignments, it is expected that their rates will increase as merited. In order to aid employers in establishing or reviewing pay scales, the Institute completes an anonymous pay rate survey for each work term. Averages obtained from these surveys are then made available to both employers and students.

Fees

During study periods, cooperative education students are

expected to be full-time students and are assessed according to the regular fee schedule. During work terms, cooperative education technology students are formally registered in a job practicum course; they are assessed course fees equivalent to one-half of those assessed for general tuition, plus the "off-campus" Student Activity Fee. Fees for trades coop programs are currently under review.

Evaluation

Students are required to prepare a work report on their employment during each work term. This provides experience in the preparation of written reports similar to those which an employer expects from a responsible staff member. The work report is evaluated as satisfactory or unsatisfactory by a member of the faculty, and perhaps by the employer also.

Regular performance evaluation is provided by the employer during the job period and formally on the evaluation form provided by the Institute. This form asks for ratings of specific characteristics and overall performance. Employers discuss their final evaluation with the student at an exit interview; it is reviewed by student and coordinator upon return to campus.

During each work term, each student is visited, when practicable, by a coordinator or other faculty member. Meetings such as these afford the opportunity for a frank exchange of views with the student and employer on all aspects of the job and the student's performance.

The coop work terms are graded on a Satisfactory/ Unsatisfactory (S/U) basis.

Graduation Requirements

In addition to the normal academic requirements, satisfactory work reports and work terms are required for graduation from a cooperative education program. Unsatisfactory work reports may be improved, or new ones submitted. Each work term must be completed with a grade of S for a student to remain in good standing in the cooperative education program. A student's academic record shows completion of each work term. Students completing all the requirements of a cooperative education program will receive a "Cooperative Education" designation on their academic record and on their diploma or certificate.

Library Services

The BCIT library is one of the province's major centres for technological and trades information, serving curricular needs of the Institute and providing general support to business and industry in British Columbia. Library holdings include over 200,000 volumes of books, periodicals, pamphlets, maps, microcomputer software, films, videos and kits. Major strengths are found in the collections of technical reports, standards, Statistics Canada, and annual reports of companies. The listening and viewing area of the main library houses pre-view booths, slide tape units, video monitors, microform viewers and microcomputers.

Professional staff give instruction in library research skills. The opportunity to become familiar with key information sources in a chosen field assists students not only in completing course assignments but also in facing the future challenge of keeping current in a changing work environment. As well as individual and group instruction, there are printed guides to various information sources, facilities and services.

BCIT students use computer terminals to access DOBIS, the complete on-line catalog of holdings. This is the first integrated on-line library system in the province to serve an academic community. A courier service delivers library materials between the Main Library and the Sea Island Library.

Quick Facts about the Library Services Division

Library Hours

September — May (subject to change)

Main Library

Monday-Thursday	0730 - 2230
Friday	0730 - 1700
Saturday and Sunday	0900 - 1700

Summer hours vary — check for times

For information on library hours, phone 432-8370

For information on library services, phone 432-8371

Overdues, Fines, and Replacement Policies

To maximize access to the collection, the Library levies fines on students who fail to return library materials by the due date or time. The purpose of fines is to protect the rights of all library patrons and provide an incentive to return books promptly. Overdue notices are mailed out. Overdue loans result in the blocking of further loan transactions. A nonrefundable fee is levied for overdue material that is not returned. The fee covers the purchase and processing of a replacement copy. No statement of marks, diploma or certificate will be issued until the student settles all financial obligations for overdue material.

Faculty and Staff

Paula C. Pick, B.A., M.L.S., Institute Librarian
Gerry Weeks, B.A., M.L.S., Acting Institute Librarian and Information Services Coordinator
Margot Allingham, B.A., M.L.S., Reference Librarian
Yu-Mei Choi, B.S.Sc., M.L.S., Cataloguer
Ana Ferrinho, B.A., M.L.S., Reference Librarian
Anthony Kelly, B.A., M.L.S.
Frank Knor, Dipl.T., B.Ed., B.L.S.
Merilee MacKinnon, B.A., M.L.S., Head Cataloguer/DOBIS Project Leader
Robert A. Roy, B.A., M.A., B.L.S., Technical/Public Services Coordinator

Medical Services

A three-bed Medical Services unit, located in the Student Activity Centre, is staffed by physicians and nurses Monday through Friday, 0830 - 1630, and offers the same services as any doctor's office. A doctor is on call after hours, and Burnaby Hospital is ten minutes from campus. A psychiatrist and physiotherapist are also available. All visits are strictly confidential.

All patients who wish to see a doctor must have valid medical coverage and should bring their medical or insurance number with them on their first visit. Information and application forms regarding the Medical Services Plan of B.C. and private medical insurance coverage are available in Medical Services, together with information about premium assistance (reduced rates) for eligible, low income students. **EMERGENCIES ARE ALWAYS SEEN.**

Some medication is dispensed free of charge and most immunizations are free. Prescribed allergy shots can be given. There is no dentist on staff, but Medical Services can usually assist with dental referrals.

No appointment is needed to visit Medical Services except in the case of a complete physical examination. Referral to either the physiotherapist or the psychiatrist is through Medical Services or your own physician. The physiotherapist's office is adjacent to the Medical Services facility. For more information on Medical Services please visit us or call 432-8608.

Staff

Barbara E. Copping, B.Sc., M.Sc., M.D., Director-Physician
David Mullard, M.B., B.S., Physician (part-time)
Jacqueline Hurst, B.Sc., M.D., Physician (part-time)
David Fung, M.B., B.Ch., F.R.C.P(C), Psychiatrist (part-time)
Ralph Wyatt, B.A., B.S.R., Physiotherapist
James Morrow, R.N., Nurse
Louise Baker, R.N., Nurse (part-time)
Millie Linnen, R.N., Nurse (part-time)
Joan Barrett, Secretary
Carol Braden, Medical Office Assistant

First Aid

First aid attendants are on call as follows:

Burnaby North Campus

Monday-Friday (Attendant located in Building #22)

0700-2200 Emergency: Local 8820
Non Emergency: Local 8872

Saturday (Attendant located in Building #22)

0830-1230 Emergency: Local 8820
Non Emergency: Local 8872

Burnaby South Campus

Monday-Friday

0830-1630 Local 8608 or 5609

Note: After 1630 Monday-Friday and on Saturday, call north campus attendant as above.

When first aid attendants are on duty:

- (a) If injury or health problem is life threatening or if patient is otherwise immobile:
 - (i) Call attendant as above giving precise location of patient;
 - (ii) Call ambulance at 872-5151 advising them to enter the campus via Willingdon/Goard Way;
 - (iii) Call security — pager #735-5201, wait for beep tone, give location of patient and request security to meet ambulance at Willingdon/Goard Way entrance and escort ambulance crew to patient.
- (b) If patient is mobile, escort to first aid attendants at above locations.

When first aid attendants are not on duty:

If injury or health problem is life threatening or if patient otherwise

requires medical treatment call ambulance at 872-5151.

Sea Island Campus

Monday-Friday, 0800-1600

Housing

Once you have been officially accepted at BCIT, the BCIT Housing Office will help you to find housing. We urge you to begin your search immediately upon acceptance.

Maquinna Residence

If you are registered in a full-time BCIT program of four months duration or more, you are eligible to live at Maquinna Residence.

The residence is situated on campus a short walk from classes, the Student Centre, recreational facilities and medical services. It accommodates 336 residents in seven low-rise, split level houses. The houses consist of apartment blocks where 12 students live together sharing kitchen and cooking facilities, living/dining rooms, washrooms and laundry facilities. Residents may choose all female, all male or co-ed apartments. Each house has a Resident Advisor who is there to help with counselling and advice, in case of emergency, and to facilitate social events. Each resident has a private bedroom, fully carpeted and comfortably furnished with a bed, desk, dresser, mirror, two chairs and a desk lamp. Ample closet space is provided.

Cost

The cost of a room at Maquinna Residence in 1987 was \$265.00 per month. This does not include meals, as students do their own cooking. Cost is subject to change.

How to Apply

When you are advised of your academic acceptance by BCIT, you will also receive complete information and an application form for Maquinna Residence. Contact the Housing Office as soon as possible — accommodation is limited.

Off Campus Housing

Since residence accommodation is limited, most BCIT students live off campus. The Housing Office maintains a register of suitable local accommodation. Maps, general information, accommodation listings and a telephone service are available.

Costs for off campus accommodation vary according to the type of accommodation and location you select. In 1987 average monthly costs were approximately:

Room & board	\$350.00
Sleeping room	\$150.00
Room with cooking facilities	\$250.00
Basement suites	\$275.00
Apartments	\$400.00
Shared accommodation (usually a rented house)	\$250.00

The off campus housing service is available throughout the year. Weekend and evening service is available at certain times of the year. To check the hours of operation of the BCIT Housing Office, please contact 432-8677.

Due to the high turnover of off campus accommodation, pre-printed lists of accommodation cannot be mailed out. Such lists would be out of date by the time you received them. Landlords and tenants prefer to meet each other before entering into an agreement. However, if you are definitely unable to make an advance trip to the area, you may wish to enlist the help of a friend or relative living in the Lower Mainland for assistance in securing accommodation.

Married Student Accommodation

BCIT does not have residence accommodation for married students or students with dependents. The off campus housing service includes listings appropriate for families.

Food Services on Campus

The Food Training Centre Building 2N

Food operations are mainly performed by students in the Professional Cook Training and Hospitality Administration programs. FTC service hours are as follows:

Snack Bar — Monday to Friday 0700 to 1330;

Cafeteria — Monday, Wednesday and Friday 0900 to 1530;
Tuesday and Thursday 0900 to 1830.

Bakery and Retail Meats Outlet

A variety of fresh baked goods is available from the commercial baking course for sale to staff, students and public. Choice depends on training but you're sure to get a good buy and FRESH products.

In the meat counters you'll find products from the Retail Meat Processing and Sausage Making and Smoked Meats programs. There's a wide variety of beef, veal, lamb, pork and deli products every day as well as ready-to-serve entrees. Again, choice depends on training. Freezer orders are also taken at the counter as well as special orders for cakes, pastry, meat and cheese trays.

The Campus Cafe

The Campus Cafe, Breezeway of Building 2N, is open **Monday through Thursday from 0700 to 1000** for breakfast cooked to order. Lunch is served from 1100 to 1330 and dinner from 1600 to 1930. At both lunch and dinner there's a choice of hamburgers made to order; pasta bar with choice of sauces and pastas; fresh fruit health bar; salad bar and the never-empty soup corner. The deli-bar offers sandwiches made to your order with seven kinds of bread, croissants and pita bread. In fine weather, the patio area has tables for eating outdoors. In the Campus Cafe there is a large non-smoking area and the surroundings are made pleasant by dozens of hanging plants. On **Friday** there is no evening service and **closing time is 1530**. On **Saturdays** the Campus Cafe opens for breakfast **from 0800 to 1000 and for lunch from 1100 to 1330**; coffee and snacks are available from opening to closing. The Campus Cafe is operated by Campus Food Services, BCIT. Questions may be addressed to the manager, Tony Spotzl, at local 8819.

Night School Service

Mobile coffee service is available in buildings 1A and 2N, Monday through Thursday from 1915 to 2015, for the convenience of those attending night classes. The Campus Cafe remains open until 2100 Monday through Thursday.

Forster's

Forster's operates two cafeterias on the north side of the campus. The J.W. Inglis building cafeteria is located on the second floor - at street level. It is open: Monday to Thursday 0630-2100, (the kitchen closes at 1900); Friday 0630-1500; Saturday 0800-1230. The Electrical Training Centre cafeteria is open every day at the same times, Monday-Friday, as the J.W. Inglis cafeteria and closed on Saturday. Both facilities offer a different entree everyday, all day; a grill, salad bar and hot soup as well as hot breakfasts.

Culinaire Dining Room

This training area at Redford House offers gourmet dining at reasonable prices, Monday through Friday for breakfast at 0715-1030; lunch at 1030-1300 and dinner from 1730-2100.

For reservations call 298-8260. The Culinaire Dining Room is located at 1850 Rosser Avenue in Burnaby, across from Brentwood Shopping Centre.

Catering Service

Campus Food Services offers catering service for meetings, dinners and campus functions. Call local 5615 for information.

Growlies

The Student Association operates "Growlies" at the SAC serving a variety of salads, sandwiches and hot foods. Vending machines are located at several points around campus. These services are available from September to the end of June. The summer schedule is not confirmed at time of printing.

Transit

The BCIT campus has frequent daily bus service providing direct access to the campus. In addition, the Sky Train rapid transit service is a short bus ride from the campus. The cost of monthly transit passes varies according to zones travelled; passes are available from "This'n That" stores on campus.

For information about bus routes, fares and schedules within the Greater Vancouver transit system, call the Metro Transit Information line at 324-3211. You can also pick up bus schedules for Greater Vancouver in the Maquinna Residence.

Parking

All vehicles parking on campus, day or night, must display a valid Institute parking permit. Paid parking is in effect 24 hours a day, year round. Parking and traffic is administered and controlled by the Safety and Security Department, Building 2T, phone 432-8719. Parking Office hours are 0700-1600, Monday to Friday. Improperly parked vehicles or vehicles not displaying valid permits are subject to impoundment off campus at the owner's risk and expense. License numbers of impounded vehicles are posted at the entrance to the parking office, Building 2T, together with the name and location of the towing company. Persons parking on campus are encouraged to read the Parking and Traffic Regulations available at the parking office. Vehicles should be kept locked at all times. BCIT does not accept liability for theft from, or damage to, vehicles parked on campus.

Parking permits can be purchased at the parking office 0700-1600, Monday-Friday, year round. Sales of parking permits at other times will be announced in the campus media.

Parking for the Physically Challenged

Special parking arrangements are available by contacting the parking office.

Parking Violations

To avoid vehicle impoundment, please note the following: ensure that a valid permit is displayed at all times while parked on campus day or night; park only in areas authorized by permits; do not park in fire lanes, blocking fire hydrants, along yellow curbs, on roadways or anywhere not designated for parking or that impedes free traffic flow/pedestrian safety; do not block off another parked vehicle; do not use parking permits fraudulently.

Vehicle Assistance

Vehicle breakdowns or other problems should be referred to security staff who will assist if possible.

Canada Employment Centre

The Canada Employment Centre is located in Room 222 of building 1A, above the Bank of Commerce.

The office has two distinct functions. The first provides a placement service to certificate and diploma students in the technologies; this includes summer and part-time employment for undergrads as well as permanent work for alumni, who are welcome to use the service for two years after graduation. To assist new graduates, the Centre provides an on-campus recruiting program from January to June for employers to interview students for career positions, prior to graduation. The second function involves referral, documentation and maintenance of students into places purchased on their behalf by Employment and Immigration Canada.

The Centre is open throughout the year. Phone 432-8333 for more information.

Staff

Seann Lyncaster, Branch Manager

Bookstore

The BCIT bookstore is located at the south end of the campus on the ground floor in the southeast corner of Building 2D. It sells required textbooks and educational material for BCIT courses. Textbook lists may be consulted in the bookstore. In addition to textbooks, an extensive selection of school, drafting, engineering and computer supplies are available. Personal computers may be purchased at special educational prices by full-time students. Special orders for books may be placed. The bookstore is open from 0800-1600 hours throughout the year, Monday to Friday. Extended hours of operation are offered at the beginning of each term. A schedule of dates and extended hours is posted in the bookstore prior to the commencement of each term.

Textbooks and educational material for courses at the Downtown Education Centre are available at the bookstore outlet at that location. This outlet is open at the start of each term. Telephone 432-8477 for hours of operation.

Used Textbooks

The BCIT bookstore schedules used book buybacks each term. Textbooks required for that term are purchased from students for up to 50% of the current new book price. Buyback dates are posted around the Institute a few weeks prior to the event.

Recreation and Athletic Services

BCIT offers a variety of indoor and outdoor recreational facilities designed to appeal to most students. These include four racquetball/handball courts which now accommodate the new sport, wallyball, and two squash courts; an excellent gymnasium accommodating eight badminton, two basketball and three volleyball courts, which is also used for many other sports and recreational activities. Our activity room is equipped with a universal gym, free weights, exercise area, table tennis, ballet barre and much more. Four tennis courts, two sports fields, a fitness trail and exercise stations, as well as a 396 metre track offer excellent outdoor recreation. Complete shower facilities, change and locker rooms for both men and women are included.

Hours of Operation

September — May: Monday-Thursday 0645-2300
 Friday 0645-2100
 Saturday 0900-1900
 Sunday 0900-2100

June — August: to be announced.

Facility hours are subject to change, check the weekly schedule posted outside the Recreation and Athletic Equipment office.

Facilities and Services — How to Use Them — All students, staff and alumni are encouraged to use the recreation facilities. Lockers, towel and laundry services are available to rent. Most equipment is provided on loan: current BCIT identification is mandatory. There is a nominal rental fee for balls, birds and racquets. There are many structured programs to participate in as well as plenty of recreation time when the gym is available for your own activity. Check the facility schedule for open and programmed time.

Guests — Students and staff may bring one guest into the facility at any time. Guests cannot sign out equipment and are asked to follow the facility regulations.

How trades or Technologies can book the Gym — Gym time is available three to five specified periods each week; BCIT groups can book half the gym. This program is known as challenge bookings and is set up so groups can get together and enjoy a recreation activity of their choice.

How to Book Badminton and Table Tennis Facilities — Bookings are made on a first-come, first served basis with no charge for court time. You must check in and book the court at the equipment office. (No pre booking allowed. 45 minutes court time limit).

How to Book Tennis Courts — Tennis courts can be booked for a small fee or you may play on a first-come, first-served basis, with no charge for court time. You must check in and pay prior to playing if you have booked a court.

How to Book Squash and Racquetball Courts — How often can I book? Seven full days advance booking per person, Monday through Sunday. Initial and last name must be given for all bookings. Student and staff bookings may be made by calling 432-8612 or in person. A current BCIT library card or BCIT picture ID card must be shown when you pay. Alumni may book in person or by telephone. General public may book courts in person or by telephone.

Payment of Court Fees — All fees must be paid prior to court use. Current BCIT ID must be presented in order to get the student rate. Players are required to check in at the Equipment Office prior to using the courts. A 10 minute grace period is

provided for players to claim their courts. If left unclaimed, they may be resold to someone else, unless prepaid. Players must vacate their courts at the end of the specified booking period whether the game has ended or not. Failure to observe court courtesy rules will result in loss of playing privileges. Recreation and Athletic Services reserves the right to book court times for private lessons.

Facility Regulations — The Recreation and Athletic Services staff are responsible for the facility. **Smoking is not allowed in any part of the recreation facility.** Alcoholic beverages, including beer and wine, will not be allowed in the recreation facility unless approved by the Institute's chief executive officer and the appropriate permits obtained. Proper attire and accessories, shorts and shirts or sweat suits are highly recommended and clean, non-marking gym shoes (white soles preferred). Safety eye protection is highly recommended while playing squash or racquetball.

Recreation and Athletic Services — Is here to assist you in planning your leisure time. Fitness activities and leagues are scheduled around your academic programs. If you have a special interest that does not appear in this section drop in or call the Recreation and Athletic Services office located in the lobby of the SAC building, telephone 432-8613.

Intramurals — Leagues for volleyball, indoor soccer, soccer, ice hockey, wallyball, flag football, basketball, squash, racquetball, etc. are organized for school breaks, evenings and early mornings. Watch notice boards and **The Link** for costs and team information.

Clubs — We organize activities such as trips or tournaments for weekends or midterm breaks. Some funding is available to assist in transportation and equipment rentals. Activities pursued by existing clubs include skiing, outdoor recreation, scuba, sky-diving, archery and windsurfing.

Non-credit Courses — Beginner courses in kung-fu, squash, racquetball, jazz dance, golf, aerobic fitness, etc., are on-going during the school year and are subsidized by the student activity fee.

One-day Workshops — Are scheduled on weekends. They include self-defence for women, massage, stress management and various sports.

Kilometre Club — The Kilometre Club is sponsored by the Recreation and Athletic Services Department to encourage students, staff and alumni to keep active and participate in cycling, swimming or running. To become a club member, register at the Recreation and Athletic Services Office, Monday to Friday from 1000-1400. Registration Fee: \$4.00 per person/per activity. To be entitled to a T-shirt you must: Cycle 600 km in 4 months, or Swim 30 km in 4 months or run 150 km in 4 months or a run/swim/cycle combination. On completion of the appropriate activity, a T-shirt will be awarded in recognition of your dedication to achieving your goal.

Special Events Throughout the year, we schedule special events for students and staff to promote fitness and social activities (Turkey Shoot, Challenge games, etc.), also recreational, low skill requirement, invitational and competitive tournaments with students and staff from UBC, SFU, Douglas College, etc. BCIT students are entitled to participate in any program. If you have any other interests that might attract students/staff, drop in or call the Recreation Programmer 432-8282.

Swimming Pool Tickets — The Recreation and Athletic Services Department makes available pool tickets for the following pools:

Canada Games Pool (New Westminster)	10 tickets/\$16.00
C.G. Brown Pool (Burnaby)	10 tickets/\$12.00

Alumni — Your Willingdon Club membership entitles you to participate individually or as a team in intramural leagues and other events. Contact the Recreation and Athletic office for information on leagues and schedules.

Additional Information — A brochure on dates, times and rules for intramural activities is available from the Recreation and Athletic Services and Equipment office in the SAC. (September and January)

Intercollegiate Athletics — BCIT, in conjunction with funding assistance from the Student Association, will continue to embark on the gradual re-introduction of an intercollegiate athletic program for the 87/88 academic year.

— Badminton	Men and Women
— Rugby	Men
— Volleyball	Men and Women
— Soccer	Men and Women
— Basketball	Men and Women
— Hockey	Men

We encourage any student wishing to try out for teams to watch for Cougar posters and to inquire at the program equipment office for practice times and locations.

Recreation and Athletic Services (Program Office) 432-8613/432-8282

Equipment Office and Attendants (Racquet Court Bookings) 432-8612

Student Association

The Student Association is the independent student union at BCIT with an annual cash flow approaching \$3 million. It provides most of the non-academic services and nearly all of the recreation and entertainment on the campus.

All BCIT students, whether full-time or part-time, automatically become members of the SA upon registration. The student

activity fee, which is paid as a small addition to BCIT course fees, goes directly to the SA to help pay for the recreational and social activities provided on campus.

Another portion of the fee goes to pay for the SA's new Campus Centre, a multi-million dollar recreational and social complex organized and financed by the SA. Phase one, containing squash and racquetball courts, is now complete. Fund raising is under way for the new Campus Centre

Student government began in 1966, two years after the Institute opened its doors. In October 1968, the Student Association was registered in Victoria as a Society under the Societies Act. The Student Activity Centre was built in July 1971 and the first This 'n That was opened. The SA pub, known as "Taps" first opened its doors in 1976. In 1978 the SA opened its own food service, Growlies. In 1983 a racquetball centre was built expanding the SAC building. In 1984 a satellite dish and screen with M.T.V. was installed in the pub. The BCIT and PVI student unions amalgamated in 1985.

New ventures of the SA include Duke's Cookie and Coffee bar (in the SAC), featuring freshly baked cookies of all descriptions and a gourmet selection of coffees — espresso, cappuccino, exotic teas, and a retail computer store in the library, which sells microcomputers at student prices. In addition, the SA now operates all vending copier machines on campus. New machines are installed in the library. Copies can also be obtained in the SAC. BCIT's SA deserves its reputation as "the best organized student union in western Canada".

There are four "This 'n That" stores on campus. Store #1, on the ground level of the 2N Building, features school supplies, calculators, clothing, photo finishing, special class needs including tapes, floppy discs, technology jackets and drafting supplies; bus passes, newspapers, munchies, gift items and a whole lot more. Store #2, located in the north foyer of the 1A Building, has nearly everything listed above plus coffee, ice cream and popcorn. Store #3, located in the SAC, specializes in clothing and sporting goods and, for your everyday needs, cigarettes, pop, munchies, newspapers and school supplies. #4 store, located in the north campus' Inglis Building, features the same items as above.

In the SAC and the Inglis Building, there is a resume and word processing service as well as an Employment Action Centre to assist students in their employment search.

The SA holds elections each March to choose eight of a ten member executive: President; VP Administration and Finance; VP Public Relations; VP Student Affairs; Sport Chairperson; Engineering Society Chairperson; Business Society Chairperson; Health Society Chairperson. In addition one student from the Vocational Division of BCIT is appointed to serve on the executive. The executive is responsible for the day-to-day management of the Association's affairs and the spending of its budget. The executive meets regularly with the Student Council consisting of representatives from all the technologies on campus.

The Executive and Council, in addition to managing the SA's internal affairs, are charged with representing BCIT students to all levels of institutional, municipal and provincial government. In recent years, this work has included lobbying against tuition fee increases, coordination of the Campus Centre and work with the BCIT administration for efficient and useful student services.

Most of the management of the SA's business operation is entrusted to a full-time professional staff of approximately 35 under the direction of Business Manager, Lorne Hildebrand. The managers for the various operations are: Linda Field — TNT Stores; Don Wright — Link; Janice Eden — Office; Ken Jack — Accounting; Ken Schoenberger — Media Services; Betty McCallum — Resume and Typing Service.

Activities

The SA funds the intramural athletics and clubs program, which provides lunch hour and after class recreation for several hundred BCIT students. Extramurals have returned to BCIT this year. For skiers, the SA has access to a 24 bed chalet at Whistler Mountain, which is available year round to students at a reasonable nightly rent.

The student newspaper, "Link", is published every Wednesday during the 9 month school year and monthly during the summer.

For the past dozen years, the SA has been a major supporter of the Shinerama Cystic Fibrosis fundraising campaign held each September, during which students shine shoes for donations around the Lower Mainland. Students are also organized to help with the Variety Club Telethon each February. Over a quarter of a million dollars have been donated to charities in Vancouver by BCIT students.

Lost and Found

Please refer enquiries to Safety and Security at 432-8356. The Lost and Found is located in Building 1A, Room 130. Hours are 0800-0900 and 1200-1300, Monday to Friday.

Lockers

Lockers at BCIT are available to students on a first-come basis, except in technologies with special requirements such as Forest Resources, Surveying and Building. Students should locate an unreserved locker near their technology and put their lock on it. Lockers are situated throughout the Institute on each floor of most buildings. Lockers must be vacated at the end of each academic year, or no later than May 31. The Institute will not accept responsibility for loss or damage to a student's personal property.

Banking

Banking services on campus are available through the Canadian Imperial Bank of Commerce situated about mid-campus in the 1A building, north end. The branch is well acquainted with Canada Student Loans, so you may choose to negotiate your loan on campus. Out of town students should bring enough money to buy books, pay fees and the first month's rent. This can be in the form of a bank draft, travellers cheques, or inter-branch banking can be arranged before students leave their home towns. For your convenience, at the same location, there is an Instant Teller Machine available with Interac Network.

The 1987-88 Board of Directors and Alumni staff. Front row left to right: Sally de la Rue Browne, Cinda Potter, Cheryl Anderson, Leigh Sheather, Nicki Magnolo. Back row left to right: Ron Kuebler, Mike Marchenski, John Leech, Robert Sawka, Tony Shelling, Gary Drescher, Robert Simons.

Alumni Association

Alumni Executive:

President: John Leech (Survey '70 and '71)
 Vice President: Robert Simons, (Marketing '72)
 Secretary: Tony Shelling
 (Administrative Management '73)
 Treasurer: Robert Sawka
 (Administrative Management '76)

The BCIT Alumni Association provides a vital communication link between graduates and the Institute. Graduates receive the Alumni News, published quarterly by the Association and the Association acts as the official record keeper for BCIT grads, organizes reunions and offers a group insurance plan.

The Association has extended membership to include Trades/Vocational graduates who have completed programs of at least 6 months duration, holders of Continuing Education Certificates as well as graduates of two year Diploma of Technology programs. Membership requires registration and is free of charge.

The Willingdon Club is available to all BCIT graduates. A three year membership costs \$30.00 and entitles you to a variety of benefits including: library borrowing privileges, access to student accommodation across Canada, special rates on Alumni travel programs, student rates for racquetball and squash courts on campus, and discounts on all merchandise sold by the Alumni Association. Club members can continue to use many student services after graduation that are not available to the general public. Graduates, or about to graduate students, may purchase membership at any This 'N That Emporium or at the Alumni Office.

Priorities for the Alumni Association include involvement in the Campus Centre Campaign and the Alumni Fund Raising Campaign, promoting professional recognition for BCIT graduates and conducting a membership survey.

The Alumni Office is located in Trailer 1D. The direct line phone number is 432-8847.

Full-Time Technology Admission Information

Burnaby is our main campus and primary location for processing applications and maintaining permanent student records. However, registration is possible at various campus sites including the Downtown Education Centre (549 Howe Street, Vancouver) and Surrey (Princess Margaret Senior Secondary School) for courses taking place at these sites.

The Office of the Registrar operates under Institute approved policies and procedures. This information is available at all locations.

Admissions Policy

BCIT's primary purpose is to provide high quality, post-secondary technological education for residents of British Columbia and Canada.

Applicant priority is given first to British Columbia residents who are Canadian citizens and landed immigrants and have lived in British Columbia for the immediate twelve months prior to enrolment; second priority is given to out-of-province Canadian citizens and landed immigrants, third priority is given to out-of-country applicants. BCIT does not accept applications from persons on visitors visas.

All applicants must provide official documentary proof that they meet the necessary Institute and technology prerequisites. Applicants lacking specific prerequisite courses or adequate grades will be referred for upgrading. Please note, students applying to BCIT are requested to submit all documentation with English translations.

Prompt and equitable attention will be given to all applications to ensure applicants maximum availability of the more than 50 excellent technological programs leading to National Diplomas. In those programs where the number of applications exceeds available seats, BCIT will select those students deemed to have the best opportunity for success.

Entry to some programs is possible several times a year. For this information, check "when to apply".

Policy Subject to Change

While all prospective students must be at least 16 years of age, there is no upper age limit.

Academic Requirements for Admission

English 12 is required for general admission to the Institute. Graduation from a senior secondary school with satisfactory grades, as prescribed by the British Columbia Ministry of Education. In addition, candidates must meet special technology prerequisites. See **Technology Prerequisites**, (page 30), and individual technology program sections.

English Language Proficiency

Since all BCIT students are expected to possess an acceptable level of language skills, applicants whose primary language is not English and have not graduated from a B.C. Senior Secondary School, may be required to demonstrate their competence in one of the following ways:

1. by scoring a minimum of 145 on the Vancouver Community College English Language Assessment Test;
2. by scoring a minimum of 550 on the TOEFL;
3. by successfully completing English 099 at Vancouver Community College; or equivalent at another B.C. Community College;
4. by individual assessment by the Communication Department;
5. by successfully completing COMM 004 (BCIT).

To obtain an information bulletin which outlines world-wide test locations and application procedures, applicants should contact: Test of English as a Foreign Language, Box 889, Princeton, New Jersey, 08540, U.S.A.

English 12 Minimum Essentials and Communications 12 are not acceptable as a substitute for English 12.

Mature Student

1. A person not eligible for admission under any other category may apply as a mature student.
2. Admission under this category is at the discretion of the Registrar on the recommendation of individual Technology Associate Deans. The Associate Dean must be satisfied that the applicant has sufficiently clear objectives, and can provide evidence of probable success in the technology of his/her choice. The Associate Dean may, at his/her discretion, require applicants to have an interview or take appropriate tests. Along with their application, applicants must submit a statement of intent outlining their reasons for applying. Enquiries regarding admissions under this category should be directed to individual Associate Deans by the Registrar.
3. Mature students must submit all supporting official documents with their applications.

Second Year Regional College Transfer

BCIT offers transfer programs for various technologies from recognized regional colleges within British Columbia. Further information may be obtained from the Office of the Registrar.

Direct Entry

Those persons who have successfully completed one or more years of study at a level equal to, or higher than, that of a BCIT full-time day program may apply for direct entry into second or third term/level of a program, providing a seat is available, course content is similar and, in the opinion of the Registrar, the applicant's academic record justifies advanced standing.

Readmission

Students may interrupt their studies after the completion of any term/level. However, an application form must be completed and submitted to the Office of the Registrar, to request readmission into the Institute.

Day Course-by-Course Registration

Students may register in courses given in full-time programs subject to the approval of the technology head, space being available, and official proof that prerequisites have been met.

A student making application for part-time day classes must obtain the signature of the technology head and instructor of each course using the form "Daytime Course-by-Course Registration" available at the Office of the Registrar. All completed forms must be returned to the Student Records Office; registration will be permitted upon acceptance. Tuition fees are due and payable at registration time.

Technology Prerequisites

School of Business

Broadcast Communications

- Radio** — All applicants must be able to type 25 wpm, and submit a short essay of approximately 500 words, detailing reasons for choosing their Broadcast Communications Option as a career.
- Television** —
- Journalism** —

Business Administration — A one year post-diploma program. Diploma of Technology in Health or Engineering, or equivalent

Financial Management — Algebra 11 and English 12 both with C+. Candidates who do not meet this requirement are to include with their application, a letter (with references) outlining their career objectives and reasons for selecting Financial Management to enable the departmental selection committee to consider their application

Hospitality Administration — English 12 and Algebra 11, both with C+. Preference given to applicants with minimum 1,000 hours experience

Human Resource Systems — Algebra 11 and English 12 both with C+

Human Resource Management Systems — A one year post-diploma program. Diploma of Technology in Health or Engineering or University graduation

International Trade — Algebra 11 with C+

Management Systems — Algebra 11 and English 12 both with C+

Operations Management — Algebra 11 with C+. Physics 11 is desirable

Tourism and Marketing Management — Algebra 11 and English 12 both with C+. Grade 11 and 12 Science courses are beneficial

Transportation/Distribution — Algebra 11 with C+

Note: Please refer to page 29 of the Admissions section, if you wish to be considered under the Mature Student category.

See Technology program description pages for other program prerequisites.

School of Engineering Technologies and Trades

Biological Sciences — Algebra 12 and Chemistry 11

Building — English 12, Algebra 12 and Physics 11, all with C

CAD/CAM — Algebra 12, Physics 11 for first year applicants. Second year, direct entry applicants Dipl. Tech., departmental approval and CDCM 201 (or equivalent)

Chemical Sciences — Algebra 12 and Chemistry 11

Civil and Structural — Algebra 12 and Physics 11

Computer Aided Engineering — Post Diploma programs.

Spatial Information Systems — Diploma of Technology or equivalent

Advanced Manufacturing — Diploma of Technology or equivalent

Resource Processing — Diploma of Technology or equivalent

CAD Programming — Diploma of Technology or equivalent or an engineering degree

Computer Systems — At least 6 grade 11 or 12 academic courses (arts and sciences), including English 12 and Algebra 11. Second year options: we specifically recommend Algebra 12 for Decision Systems and Physics 11 or 12 and Algebra 12 for Engineering Systems.

In the case of mature students, academic transcripts may be supplemented by relevant business experience, successful recent completion of relevant BCIT Part-time Studies courses with 75% or successful completion of relevant courses at other post secondary institutions with 75%. Candidates may be asked to write an aptitude test to aid in the selection process.

Electronics — Algebra 12 and Physics 11 both with C+; Chemistry 11 with C

Fish, Wildlife and Recreation — Algebra 11 with C+; Biology 11 and one of the following: another Science 11, Science 12 or Algebra 12. Resume required with all applications

Forestry — Algebra 11 with C+; two Science 11s or a Science 12, or Algebra 12

Mechanical — Algebra 12 and Physics 11

Mechanical Systems — Algebra 12 and Physics 11

Mining — Algebra 12, Physics 11 and Chemistry 11

Natural Resource Management — A post-diploma program. Graduation from a BCIT diploma program in an engineering or business technology. Degree in Bio-Science, Engineering, Geography or Geology will also be considered

Petroleum — Algebra 12 and Chemistry 11 or Physics 11

Plastics — Algebra 12 and Chemistry 11 or Physics 11

Quality Assurance and Nondestructive Testing — A post-diploma program. Diploma of Technology in Engineering or Operations Management, or 2 year College Diploma in Science, or a Bachelor's degree in Science or Engineering

Robotics and Automation — Algebra 12 and Physics 11 both with C+

Surveying — Algebra 12 and Physics 11

Wood Products Manufacturing — Algebra 12 and one science 11 (Biology, Chemistry or Physics)

Note: Please refer to page 29 of the Admissions section, if you wish to be considered under the Mature Student category.

See Technology program description pages for other program prerequisites.

School of Health Sciences

Biomedical Electronics — Algebra 12, Physics 11 and Chemistry 11, all with C+

Cytogenetics Laboratory Technology — A post-diploma program. B.Sc. in Cell Biology with emphasis on Genetics and Medical Genetics or current registration with the CSLT as a Medical Laboratory Technologist (R.T.) with relevant/recent working experience and appropriate academic background.

Diagnostic Medical Sonography — A post-diploma program. Dipl. Tech. in an allied health field such as Radiography, Nuclear Medicine or General Nursing, or a Bachelor of Science or equivalent in an appropriate health-related field. Based upon the documentation submitted, the most suitable applicants will be invited to an interview.

Electrophysiology — Algebra 12, Physics 11 and Chemistry 11 all with C+

Environmental Health — Algebra 12, Physics 11 and Chemistry 12

General Nursing (R.N.) — **Under 23 years at time of entry:** Senior secondary school graduation with: Chemistry 11, either Chemistry 12 or Biology 12 and English 12 all with C+; Algebra 11 with C.

Over 23 years at time of entry: Senior secondary school graduation or equivalent with: Chemistry 11, either Chemistry 12 or Biology 12, all with C+, all completed within 2 years prior to enrolment. English 12 with C+ is desirable. The St. John Ambulance Standard First-Aid certificate is required by the end of level 1.

Health Record Administrator: Algebra 12, Biology 12 and proficiency in typing (approx. 50 wpm)

Health Record Technician: Algebra 12, Biology 12 and proficiency in typing (approx. 50 wpm)

Medical Laboratory Technology — The following First Year University level courses (or their equivalent in a Community College) are the prerequisites for entry into the Medical Laboratory Technology program:

Biology	UBC 101 or 102
Chemistry	UBC 110 or 120
Physics	UBC 110 or 120
English	UBC 100
Mathematics	UBC 3 credits at the Math 100 level**

A complete First Year Science Program. 15 credits at UBC (or its equivalent at a Community College) is required for entry into the program. Applicants who do not have the appropriate courses and credits (or their equivalent) will not be considered eligible. All applicants who meet or are completing the academic entrance requirements will be interviewed in approximately April.

** No specific Mathematics courses are recommended. However, a total of 3 UBC credits at the Math 100 level (or its equivalent) are required. Calculus or Statistics courses are acceptable. Applicants should be aware that, in the event that their application to Medical Laboratory is not successful, Calculus courses are required for entry into most second year university science programs.

Medical Radiography — Algebra 12, Physics 11, Biology 11, Physics or Biology 12 all with C+ are the minimum required prerequisites. Current CPR Level 1 Certificate required. Typing and Introduction to Computer Science required.

Nuclear Medicine — Algebra 12, Chemistry 11 and 12, and one other Science 11. Preference given to applicants who have Physics 11

Occupational Health and Safety — Algebra 12, Chemistry 11 and Physics 11

Prosthetics and Orthotics — Algebra 12 and Physics 11. Courses in metalwork and woodwork are recommended. Note that this program offers an entry once every two years only. The next session begins September, 1988

Note: Please refer to page 29 of the Admissions section, if you wish to be considered under the Mature Student category.

See Technology program description pages for other program prerequisites.

Industrial Education Teacher Education Program — In BCIT's Industrial Education Teacher Education (IETE) program students acquire the technical, basic pedagogical skills and knowledge to teach industrial education in B.C. junior and senior secondary schools. The program may also lead to trades teaching at the post-secondary level when combined with a trades qualification.

Basic Training for Skills Development Upgrading — Level 4

Experience has indicated that those students who have taken the five months upgrading course could not successfully compete with those students who have an academic level of achievement in Engineering, Health and certain Business technologies. The mathematics and sciences which BCIT students are required to assimilate are too difficult for those who have had such limited exposure to these subjects. Students who have taken the upgrading course are still required to have Grade 12 level special technology prerequisites.

General Educational Development Tests

These tests are designed for people who have not completed high school graduation but who, because of experience, have presumably reached a level of general development equivalent to high school graduation. Unfortunately, whatever general development a person may have accomplished, mathematical and science ability and knowledge may not necessarily have been strengthened.

Therefore, success in the General Educational Development Tests is considered to be equivalent to BCIT general prerequisites; that is, graduation from a senior secondary school. Applicants who are successful in these tests are required to achieve satisfactory standings in the special Grade 11 and 12 prerequisites specified by the technology they have applied to.

How to Make up Course Deficiencies

Preparatory programs are available through the Educational Services Division for those students who lack specific prerequisites or desire refresher courses. For information, contact Student Services at 434-3304.

Technology Fundamentals

Technology Fundamentals is an upgrading program to assist full-time student applicants who lack some or all of the prerequisites for admission into BCIT programs.

Technology Fundamentals is a full-time, day school program (Monday through Friday) beginning in September and January, and running for 15 weeks.

For admission into Technology Fundamentals, applicants **must** indicate which BCIT technology program they are applying for and which session (September or January) of the Technology Fundamentals program they wish to enroll in. Applicants must attach all necessary supporting documents.

Technology Fundamentals students may be guaranteed entry to their full-time technology programs, subject to successful completion of the Technology Fundamentals program and in some cases, nonacademic requirements. Participating technologies include:

Biological Sciences	Mechanical
Building	Mechanical Systems
Chemical Sciences	Mining
Civil and Structural	Occupational Health and Safety
Electronics	Petroleum
Forestry	Survey
Health Information	

For further information contact 434-3304.

How to Apply

Applications for admission to a program should be submitted as early as possible, as some programs at BCIT have a limited number of seats available. Application forms and additional information may be obtained from the Office of the Registrar. These forms should be completed and returned with the necessary **official** documents attached. See Document Requirements.

When to Apply

Applications for admission into full-time programs are accepted for processing from the dates shown below, up to 14 days after the commencement of classes.

Term Starting	Processing Date
September 1988	October 1, 1987
• All Programs including August/88 and January/89 Nursing.	
January 1989	January 4, 1988
• Medical Radiography	
January 1989	June 1, 1988
• Administrative Systems	
• Computer Systems	
• Electronics	
• Financial Management	
• Tourism/Marketing Management	
September 1989	October 1, 1988
• All programs including August/89 and January/90 Nursing	

Applicant Status Categories

Candidates making application to BCIT will receive correspondence informing them of their status according to the following guidelines:

Acceptance — The applicant who meets the requirements of the Institute and the program may be fully accepted.

Provisional Acceptance — A decision to accept provisionally is based upon the initial information submitted by the applicant. Full acceptance is dependent on final data submitted and applicability to criteria.

Wait Lists — When all seats in a program are filled, a wait list of qualified applicants is generated. If a space becomes available, an applicant on the wait list will be given the seat. Wait-lists are not transferred to following sessions. We encourage applicants to contact Admissions who may suggest other similar programs in which seats are available.

Non-Acceptance — The applicant does not meet the requirements of the Institute and/or the program is full and closed.

Final acceptance or non-acceptance by BCIT is based on the decision of the Registrar. BCIT reserves the right to accept only those applicants who appear to have the capabilities necessary to succeed in the chosen programs.

Acceptance is non-transferable from term to term.

Document Requirements

The following official documents must accompany the completed application form. **Photocopies are not acceptable.**

1. A senior secondary school transcript showing graduation. Applicants who are presently attending high school must submit a statement of marks of grade 11 subjects, and first semester grade 12 marks from the principal's office. A statement showing courses currently attended is also required. All marks must be substantiated by a final secondary school transcript incorporating school marks and provincial exam marks.
2. If applicable, all official post-secondary school statements of marks indicating credits and grades achieved.
3. Applicants who are not Canadian citizens must submit official government documents indicating Landed Immigrant Status or Student Authorization. Transcripts and all other related academic documents must be translated into English and notarized at the applicant's expense.
4. School of Health Sciences applicants are required to complete a medical questionnaire and return it to the Medical Services Department at BCIT. Some health technologies require students to present evidence of having had a recent chest x-ray as well as having completed an immunization program. You will be notified if this information is required from you. If, due to extenuating circumstances, supporting documentation is not available at the time, students will be required to complete the necessary procedures at Medical Services, at BCIT.
5. Students who have been selected for admission must have medical insurance coverage prior to registration.

Non-Canadian students who have been selected for admission must apply in person to the Medical Services Department, for an Application for Student Medical and Hospital Plan, prior to attending BCIT. Payment for this medical coverage is to be made at the same time, either by personal cheque or money order, to the vendor of the policy. Proof of coverage will be required.
6. Applicants who voluntarily withdrew or were withdrawn from another Institute may be requested by the teaching department to provide a written report explaining the reason and/or written authorization to request a report from the previous Institute. These documents can be used to determine acceptance to the desired program.

Note: Whether or not a person is accepted for admission, academic documents are not returned. Applications and documents are not maintained by the Institute for those applicants who are accepted and are unable to enrol, or for those candidates who have not been accepted. If making re-application to BCIT, a new application must be completed and all supporting documents must be resubmitted.

Advanced Placement Categories

1. Course Exemption

Where the individual course completed at BCIT is equivalent in course content and assessment to the same, or another BCIT course that is required within the program from which certification is sought.

2. Course Credit

Where the individual course(s) and/or experience is equivalent in content and assessment to a BCIT course that is required within the program from which certification is sought, for:

- course(s) completed at another recognized post-secondary institution;
- approved course(s) that have been completed within or sponsored by a company, government body, or organization;
- documented experiential learning validating mastery in a course based on approved academic evaluation criteria.

3. Unassigned Credit

Where a course-to-course equivalent cannot be established, but the subject matter is credit-worthy toward the program for which certification is sought. This credit may be used as an elective credit (where applicable). Unassigned credit may be either in a subject area, eg. Economics — 3 credits, or in a program area, eg. Civil & Structural — 3 credits. Unassigned credit totals may not exceed the elective totals in a program of studies.

4. Challenge Credit

Where approval has been granted to challenge a course, a formal evaluation procedure takes place. Students' abilities will be assessed through written and/or oral examination, research paper, or other means. As recommended by the Technology, Challenge Credit will only be recorded after the student has completed a specified number of BCIT credits, and only a specified number of Challenge Credits will be allowed for each program.

Challenge Credit is not considered as work completed at BCIT, but when a course is successfully challenged, the number of credits required to complete a program are reduced.

5. Bulk Credit

Consideration for granted bulk credit is determined by individual programs, however bulk credit is generally limited to first year equivalency in an approved 2 year Diploma program. Bulk credit is not transferable from program to program. Bulk credit is only recorded after the student has enrolled in the program in which bulk credit is recognized.

Bulk credit may be granted for:

- Diploma of Technology graduates from a recognized post-secondary institution who are pursuing a second diploma in an approved program;
- Baccalaureate graduates from a recognized post-secondary institution who are pursuing their first diploma in an approved program;
- Students from a recognized post-secondary institution who are transferring to BCIT to complete an approved program.

Guidelines

- First year diploma and post-diploma students may only apply for credit after they have been fully accepted and have paid their commitment/term fees;

- Second year students who are direct entrants to BCIT may apply for credit upon receiving full acceptance;
- Students who are presently enrolled at BCIT may apply for credit at any time within the academic year.

Credit may be applied for each term or each academic year. Applications for the next term will be processed approximately halfway through the current term.

Credit is granted or denied by the Registrar upon recommendation by the Technology Associate Dean.

If credit is granted and not replaced with an approved course of equal duration, students are not eligible for BCIT scholarships. However, if students are registered in courses for which the weekly hours total at least 60% of the weekly hours for the full program, students may apply for a B.C. Student Loan or Canada Student Loan. In order to be eligible to receive an HONORS diploma or GRADUATING AWARD, SECOND YEAR students who receive credit in one or more courses must register in acceptable substitute course(s) in order to maintain a 100% course load, within the program term structure. Courses for this purpose must be preapproved in advance of term start by the Associate Dean.

Applications for credit must be submitted to the Office of the Registrar no later than 14 calendar days after the commencement of classes each level. Late applications will only be accepted if prior written authorization has been received by the Registrar from the Technology Associate Dean.

Change of Program

After the commencement of classes, a request for program transfer requires the completion of a Program Change form by the student. Forms are available in Student Records. It is the responsibility of the student to obtain approval and signatures from the appropriate Associate Dean, Dean and Registrar. Permission must be granted by the Registrar before a change in program can be effected.

Course Credit

A credit is defined as approximately one classroom hour per week over a 12-15 week term. Therefore, a course taught for three hours per week for 12 weeks would normally be assigned three credits.

It is recognized that in assigning credits to courses, other criteria are also considered, such as:

- course content
- learning outcomes
- whether it is a lab (clinical or practicum)

Certificates and Diplomas

Although BCIT has recently changed over from a system of **units** to the **credit** system as defined above, we are still in the process of reviewing our certificates and diploma requirements in terms of number of credits.

Transfer from Full-Time Studies to Part-time Studies

A student transferring to part-time studies from a full-time diploma program may be granted credit exemption for courses successfully completed prior to withdrawal from full-time studies. A student who fails one or more subjects in the full-time program is encouraged to consider part-time studies programs.

Examinations, Grading and Marks

Formal examinations are written at the end of each term. Students are required to take the examinations for each course at the time set by the Institute.

For full-time students, mid-term examination papers may be returned. Only those examinations designated as "restricted exams" by the Dean will not be returned.

Determination of Standing

Final standing is determined on the basis of term progress and examination results. Full-time students, subject standings are reviewed by a School Marks Review Committee where final standing is determined. Subject standing is as follows:

1 — First class	80% or more
2 — Second class	65% to 79%
3 — Pass	50% to 64%
4 — Failure	— less than 50% except for some programs/courses which have a failing grade greater than 50%. These courses will show "F" beside the % grade, ie: "55F", — Unofficial/unapproved withdrawal from a program/course.

"F" appearing beside a course indicates one of the following:

- a) Failure in the subject
- b) Withdrawal after the deadline (refer to section on Withdrawal from Program Courses.)
A full-time student whose transcript bears such a standing is generally not permitted to proceed to the next term unless granted special permission by letter from the Registrar, after approval by the School Marks Review Committee.
- A Aegrotat — A pass standing based on satisfactory term marks, but has an incomplete evaluation due to illness or other circumstances.
- C Course Credit Granted — Recognition of approved equivalent studies and/or experience or challenge exam.
- EC Exempt Course — Recognition of previous course completion at BCIT.
- PP Provisional Pass — Will be changed to Pass or Fail depending on performance in a subsequent specific course.
- P Provisional Pass Fulfilled — Provisional Pass conditions achieved.
- AP Adjudicated Pass — Standing based on overall performance in the term.
- N Not Complete — Course requirements not completed.
- X No examination or grade given for this course.
- S Satisfactory — Course requirements fulfilled, no percentage mark assigned.
- U Unsatisfactory — Course requirements not fulfilled, no percentage mark assigned.
- AU Audit — Attended course, no credit assigned.
- W Withdrawal — Approved withdrawal from a course or program.
- R Refer to outside source for student achievement record.

Withdrawal from Program/Courses

Students withdrawing from one or more courses after the deadline will receive an "F" on their transcripts. Withdrawal with permission from the Associate Dean or Dean and within withdrawal deadlines will show a "W" on the transcript. Neglect to withdraw will result with "OF" on the transcript. Appeals to the Registrar will be adjudicated by the Registrar and the Dean. It is the student's responsibility to check withdrawal deadlines.

Students withdrawing officially from the whole program, will be allowed to do so until two-thirds of the way through the term and a "W" will show on the transcript. If withdrawing after the deadline, the transcript will show "F" for all courses dropped.

Distribution of Marks

The Statement of Marks is mailed to students at the end of each term by the Registrar's Office. In addition, graduating students will receive one free official transcript indicating Certification granted.

Students who fail the term and are not permitted to continue in the program, will be advised by telegram, if the break between terms is two weeks or less. A letter indicating student status and Statement of Marks follows the telegram.

Marks will not be released over the telephone.

Transcripts

A fee of \$4 for the first copy and \$1 for each additional copy is charged for transcripts. The fee is due at the time the request is made.

Withholding Statement of Marks

No Statement of Marks, transcript, diploma or certificate will be issued until the student has resolved all financial and other obligations to the Institute such as tuition fees, library fines, rent. These documents may also be withheld on such other grounds as directed by the Board of Governors.

Marks Reassessments

It is the policy of the Institute that students shall be dealt with fairly in all decisions affecting their academic standing. A student who is not satisfied with the final mark awarded is cautioned that the grade has been reviewed carefully and, aside from clerical error, reassessment seldom results in a higher mark.

Students wishing reassessment of their academic standing must first discuss the matter with the instructor responsible for the initial assessment and, if dissatisfied with the result of that discussion, with the Technology Associate Dean.

Failing a resolution of the problem, students may submit a Request for Reassessment on the Institute form available from the Office of the Registrar. **ALL PARTS OF THE FORM MUST BE COMPLETED AND MUST REACH THE REGISTRAR'S OFFICE WITHIN 7 SCHOOL DAYS AFTER THE START OF CLASSES IN THE NEXT TERM, OR WITHIN 30 CALENDAR DAYS AFTER THE MAILING OF MARKS FROM THE INSTITUTE, WHICHEVER IS LESS.**

There is a fee of \$25 for each subject reassessed. If the mark or standing is favorably adjusted, the fee will be refunded.

The Registrar will inform students by letter of the result of the reassessment.

Marks Appeals

A student who is dissatisfied with the outcome of a reassessment may appeal the decision to the President.

The student must first discuss the problem with the Dean of the appropriate School. The Dean must provide the Registrar with a written statement confirming the outcome of the discussion.

If the student then decides to proceed with the appeal, the student must complete and sign a Request to Appeal form and submit it to the Registrar's Office, along with the \$25 fee, **WITHIN TWO WEEKS OF THE MAILING OF THE RE-ASSESSMENT RESULT TO THE STUDENT.**

An Appeal Committee will be formed to deal with the appeal according to procedures approved by the Educational Council for that purpose.

The President will inform the student by letter of the result of the appeal.

NOTE: A student who has been permitted to audit classes during the reassessment may continue to do so during the appeal.

Attendance

See Conduct and Attendance, page 4

Failures and Repetition

Students who fail more than one subject in a term may be permitted to repeat the term only at the discretion of the Dean and the Registrar (see Readmissions procedure under Admissions). It is the responsibility of students who have failed one or more subjects, but are permitted to continue with their programs of studies, to present evidence of successful completion of the failed subject(s) to the Office of the Registrar prior to the end of the next term or before a Diploma of Technology is awarded, whichever condition is specified at the time or subsequent to the failure.

Student Research Reports

Some BCIT students are required to research and write reports, with the guidance of faculty and staff, as part of their course work. Unless otherwise specified by the instructor, these reports are assigned as educational exercises only. The student, not BCIT, is ultimately responsible for the content of such a report.

Diplomas and Certificates

Graduates of the British Columbia Institute of Technology will be awarded a nationally recognized Diploma of Technology or Certificate of Technology at the convocation exercises. Graduates unable to attend the convocation exercises will have their diploma or certificate sent by registered mail to the current address on file with the Institute.

Honors Diploma

An Honors Diploma is awarded to a graduating student whose average marks for all courses that constitute an approved second year program of studies is 80% or greater.

Students who receive credit/exemption in one or more courses must register in acceptable substitute course(s) in order to maintain a 100% course load within the program term structure. Courses for this purpose must be pre-approved in advance of term start by the Associate Dean.

Post-Diploma

After receiving a Diploma of Technology in any field of study from BCIT, a graduate may earn a second diploma in another area of study upon the successful completion of one full year or its equivalent. Each program will be developed in consultation with the student's Associate Dean, giving special recognition to the student's individual needs. Each program leading to a Double Diploma must be approved by the Technology Associate Dean and the Registrar. Application forms may be obtained from the Office of the Registrar.

Replacement

Only one diploma/certificate will be issued to each student. Should a student request a copy because of loss, a form must be completed and returned to the Office of the Registrar. Upon review of the reason for the loss, the Registrar **may** issue a replacement, and the graduate will be charged the \$10 processing fee.

Application for Graduation or for the Granting of a Certificate or Diploma

The following students must apply to graduate:

Students who are registered in the final level of their programs must apply by the 8th week of their final term;

Students who have completed outstanding courses through Part-time Studies.

Forms for Application for Graduation or for the granting of a Certificate or Diploma may be obtained from the Student Records Office.

For further information regarding graduation or eligibility, contact the Graduation Eligibility Assistant.

Fees and Expenses: Full-time Technology Programs

Full-time Tuition Fees Policy for Academic Year 1988/89

Tuition expenses are reviewed annually and have been established by the Board of Governors of the British Columbia Institute of Technology and approved by the Ministry of Education for the academic year 1988/89 and are subject to change each academic year.

1. A non-refundable commitment fee of \$75.00 is due upon the applicant's acceptance into first level, including Post Diploma programs. This fee is applied toward the tuition fees and is not transferable to part-time courses.
2. An accepted applicant whose commitment fee has not been paid immediately upon acceptance or provisional acceptance, will forfeit the seat which has been reserved.
3. An accepted applicant is required to pay the remainder of first level fees 60 days before the commencement of classes.
4. An applicant accepted less than 60 days before the commencement of classes is required to pay tuition fees upon acceptance.
5. Post Diploma Program students pay according to two-level programs.
6. After the commencement of classes, students whose fees are outstanding will be excluded from classes and have their registrations cancelled. An additional \$50.00 fee will be levied for reinstatement into classes.
7. Part-time day courses are assessed \$54.00 per credit to a maximum tuition fee of \$680.00 per level. These fees are subject to change for 1988/89.
8. **Second Year Students** — A student returning to begin the second year (third term) of a two-year program is required to pay full term fees 30 days before the commencement of classes.

Payment made by cheque or money order should be made payable to the BRITISH COLUMBIA INSTITUTE OF TECHNOLOGY or BCIT. Payment may also be made by VISA or MASTERCARD. A charge of \$15.00 will be levied for costs in handling cheques returned for non-sufficient funds or other reasons. Please include your SOCIAL INSURANCE NUMBER with your payment.

International Students

Tuition fees for International Students will be based on a cost recovery formula taking into account the direct and indirect costs of instruction. Except where reciprocal agreements or contracts exist, individual international students enrolled in standard programs will pay double the prevailing domestic tuition fees for that program.

Annual Fees

Tuition fees and all related policies are under review for the 1988/1989 year by the British Columbia Institute of Technology Board of Governors and may be subject to change. Current 1987-88 fees are as follows:

	1st Year	2nd & 3rd Year
General Tuition	\$ 1360	\$ 1360
Student Activity (annual)	88	88
Graduation Convocation (mandatory)		15
Total	<u>\$ 1,448</u>	<u>\$ 1,463</u>

First Year Students - Subject to change for 1988/89

All first year students must pay their fees according to the following schedule:

First Level — due 60 days before commencement of classes

General tuition	\$ 680
(includes \$75 non refundable commitment fee)	
Student activity fee	44
	<u>\$ 724</u>

Second Level — due first week of classes

General tuition	\$ 680
Student Activity	44
	<u>\$ 724</u>

Second and third year students - Subject to change for 1988/89

All second and third year students must pay their fees according to the following schedule:

Third Level — due 30 days before commencement of classes

General tuition	\$ 680
Student activity	44
	<u>\$ 724</u>

Fourth Level — due first week of classes

General tuition	\$ 680
Student activity	44
Graduation fee	15
	<u>\$ 739</u>

General Nursing

All students must pay according to the fee schedule previously stated for the School of Health Science.

Two-level Programs - Subject to change for 1988/89

Health Record Technician and Post Diploma Programs

Level 1 (fall term) — due 60 days prior to the commencement of classes

General Tuition	\$ 680
(includes \$75 non-refundable commitment fee)	
Student Activity	44
	<u>\$ 724</u>

Level 2 — due first week of classes

General Tuition	\$ 680
Student Activity	44
Graduation	15
	<u>\$ 739</u>

Electronics Technology - Subject to change for 1988/89

All students must pay according to the fee schedule previously stated in the Calendar of Events for the School of Engineering Technologies and Trades on page 38

NOTE: The only exception is the Co-op Program.

Co-op Program — due first week of classes.

General Tuition	\$ 340
Student Activity	22
	<u>\$ 362</u>

Miscellaneous Fees

Duplicate ID card	\$ 5.00
Duplicate Diploma/Certificate	\$10.00
Duplicate Tax Receipt	\$10.00
Duplicate T2202A	\$10.00
NSF Cheques	\$15.00
Reassessment or Appeal of Exam	\$25.00 per course
Transcript of Marks	\$4.00 for first copy and \$1.00 for each additional copy
Challenge Exam Fee	\$75.00
Graduation Fee	\$15.00
Reinstatement Fee	\$50.00

Tax Receipts

An official Tax Receipt will be mailed by Financial Services on or before February 28. To allow for normal mail delivery, students should wait until March 31 before contacting Financial Services if their tuition fee tax receipt has not been received. A charge of \$10 will be levied for a duplicate report.

Note: To ensure that the receipts are sent to the correct address, students should notify the Students Records Office immediately of any changes of address.

Financial Obligation to the Institute

No Statement of Marks, transcripts, diploma or certificates will be issued until the student has cleared up all financial obligations to the Institute, such as tuition fees, library fines and rent.

Withdrawal and Refund Procedure

subject to change for 1988/89

How to Withdraw

Students who wish to withdraw officially from BCIT must commence the process by first reporting to Student Services.

Students who are asked to withdraw from a course for reasons of discipline or unsatisfactory progress may forfeit any right to a refund under this section.

Refund Policy

Refund of fees for all full-time and part-time day students who withdraw up to 14 days after the commencement of classes:

General Tuition: Complete refund, less \$75.

Student Activity: Complete refund.

Refund of fees for students who withdraw 14 days after the commencement of classes:

General Tuition: No refund.

Student Activity: Appropriate student activity fee refunds will be issued by the Institute up to the last day of withdrawal refund.

After the last day of February, any student activity fee refund must be claimed in writing from the BCIT Student Association Office and BCIT library card turned in. Withdrawal verification will be made by the BCIT Student Association before processing the claim.

Important Dates. Full-time Technology Programs 1988-89

BCIT is open except on statutory holidays. See subsequent pages for Electronic Technology, General Nursing, Medical Laboratory and Diagnostic Medical Sonography.

1988

Thurs June 2	Level 2: Classes begin for Administrative Systems, Computer Systems, Financial Management, Tourism and Marketing Management
Tues June 7	Level 2: Fee deadline for Administrative Systems, Computer Systems, Financial Management, Tourism and Marketing Management
Thur June 16	Last day to apply for course credit exemption
Thur June 16	Last day to withdraw and receive full refund (less \$75)
Fri July 1	CANADA DAY
Fri July 8	Level 1: Fee deadline for registering September 5
Fri July 29	Last day to withdraw in order to receive "W" on Transcript
Mon Aug 1	B.C. DAY
Mon Aug 8	Level 3: Fee deadline for registering September 5
Mon-Fri Aug 22-26	Level 2: Examinations for Administrative Systems, Computer Systems, Financial Management, Tourism and Marketing Management
Mon Sept 5	LABOR DAY
Tues Sept 6	Levels 1 and 3: Registration
Wed Sept 7	Levels 1 and 3: Classes begin
Tues Sept 20	Last day to withdraw to receive a full refund (less \$75)
Tues Sept 20	Last day to apply for course credit/exemption
Wed Sept 21	SHINERAMA
Mon Oct 10	THANKSGIVING
Tues-Wed Oct 26-27	AWARDS
Thur Nov 3	Level 1: Fee deadline for Administrative Systems, Computer Systems, Financial Management, Tourism and Marketing Management, registering January 3, 1989
Fri Nov 4	Last day to withdraw in order to receive "W" on transcript
Fri Nov 11	REMEMBRANCE DAY
Mon Dec 5	Term 3: Fees due
Mon-Fri Dec 12-16	Levels 1 and 3: Examinations (most technologies)
Mon Dec 19	Start of CHRISTMAS BREAK for TECHNOLOGY students

Thurs Dec 22	Last day of training for TRADES non-apprentice students
Fri Dec 23	Last day of training for TRADES apprentices
Fri Dec 23	BCIT closed
Sun Dec 25	CHRISTMAS DAY
Mon Dec 26	BCIT closed
Fri Dec 30	BCIT closed

1989

Sun Jan 1	NEW YEARS DAY
Mon Jan 2	BCIT closed
Tues Jan 3	Level 1: Registration for Administrative Systems, Computer Systems, Financial Management, Tourism and Marketing Management
Tues Jan 3	ALL TECHNOLOGY, TRADES AND APPRENTICE CLASSES BEGIN
Fri Jan 6	Levels 2 and 4: Term fee deadline
Fri Jan 13	WINTER CONVOCATION
Mon Jan 16	Last day to withdraw to receive full refund (less \$75)
Mon Jan 16	Last day to apply for course credit/exemption
Mon-Fri Mar 13-17	SPRING BREAK for all technology students — except Electronics
Fri Mar 24	GOOD FRIDAY
Mon Mar 27	EASTER MONDAY
Mon Apr 3	Last day to withdraw in order to receive "W" on transcript
Mon May 22	VICTORIA DAY
Tues-Fri May 23-26	Levels 1, 2, and 4: Examinations
Thur June 1	Level 2: Classes begin for Administrative Systems, Computer Systems, Financial Management, Tourism and Marketing Management
Tues June 6	Level 2: Fee deadline
Tues-Wed June 13-14	AWARDS
Thur-Fri June 15-16	SPRING CONVOCATION
Mon July 3	CANADA DAY — BCIT closed

Diagnostic Medical Sonography

1988

Mon June 8	Level 1: Fee deadline for registering Tuesday Sept 6, 1988
Fri July 1	CANADA DAY
Mon Aug 1	B.C. DAY
Mon Sept 5	LABOR DAY
Tues Sept 6	Level 1: Registration
Wed Sept 7	Level 1: Classes begin
Tues Sept 20	Last day to withdraw to receive full refund (less \$75)
Tues Sept 20	Last day to apply for course credit/ exemption
Wed Sept 21	SHINERAMA
Mon Oct 10	THANKSGIVING
Tues-Wed Oct 26-27	AWARDS
Fri Nov 4	Last day to withdraw in order to receive "W" on transcript
Fri Nov 11	REMEMBRANCE DAY
Mon-Fri Dec 12-16	Examinations
Mon Dec 19	START OF CHRISTMAS BREAK
Fri Dec 23	BCIT closed
Sun Dec 25	CHRISTMAS DAY
Mon Dec 26	BCIT closed
Fri Dec 30	BCIT closed

1989

Sun Jan 1	NEW YEARS DAY
Tue Jan 3	Level 2: Clinical phase begins
Fri Jan 6	Level 2: Fee deadline
Mon Jan 16	Last day to withdraw to receive a full refund (less \$75)
Mon Jan 16	Last day to apply for course credit/ exemption
Fri Mar 24	GOOD FRIDAY
Mon Mar 27	EASTER MONDAY
April 24-28	SPRING BREAK
Mon May 22	VICTORIA DAY
Tues June 6	Last day to withdraw in order to receive "W" on transcript
Mon July 3	CANADA DAY
Mon Aug 1	B.C. DAY
Wed Aug 28	Examination Day

NOTE: There is no summer break for this program.

Electronics Technology

1988

Fri July 1	CANADA DAY
Fri July 8	Level 1: Fee deadline for registering September 6
Fri July 29	Application deadline for students on a modified program
Mon Aug 1	B.C. Day
Mon Aug 8	Level 3: Fee deadline for registering September 6
Mon-Fri Aug 15-Sept 2	In-person registration for students on a modified program
Mon-Fri Aug 29-Sept 2	In-person course/section changes
Mon Sept 5	LABOR DAY
*Tues Sept 6	All Levels: Registration ; CO-OP 1 and 2 begin
Tues Sept 6	Levels 2,3,4,5: CO-OP 1&2; classes begin
Fri Sept 9	Levels 2,3,4,5: CO-OP 1 & 2; fees due
Fri Sept 16	Last day to change sections
Tues Sept 20	Last day to withdraw in order to receive full refund (less \$75)
Tues Sept 20	Last day to apply for course credit/ exemption
Wed Sept 21	SHINERAMA
Mon Oct 10	THANKSGIVING
Tues-Wed Oct 26-27	AWARDS
Fri Nov 4	Last day to withdraw in order to receive "W" on transcript
Fri Nov 11	REMEMBRANCE DAY
Thur Dec 1	Level 1: Fee deadline for starting February 6, 1989
Mon Dec 19	START OF CHRISTMAS BREAK
Fri Dec 23	BCIT closed
Sun Dec 25	CHRISTMAS DAY
Mon Dec 26	BCIT closed
Fri Dec 30	BCIT closed

1989

Sun Jan 1	NEW YEARS DAY
Mon Jan 2	BCIT closed
Tue Jan 3	Classes resume
Mon-Fri Jan 11-13	All Levels: Examinations
Fri Jan 13	WINTER CONVOCATION
Mon-Fri Jan 23-27	Registration week for returning students

Mon Jan 30	Levels 2,3,4,5: CO-OP 1 and 2 classes begin
Mon Jan 30	Term 1: Registration
Fri Feb 3	Levels 2,4,5: CO-OP 1 and 2; fee deadline
Thurs Feb 9	Last day to change sections
Fri Feb 10	Last day to withdraw in order to receive full refund (less \$75)
Fri Feb 10	Last day to apply for course credit/ exemption
Fri Mar 24	GOOD FRIDAY
Mon Mar 27	EASTER MONDAY
Wed Apr 5	Last day to withdraw in order to receive "W" on transcript
Mon May 22	VICTORIA DAY
Tues-Fri May 23-26	All levels: Examinations

Full-time Trades Admission Information

BCIT is the largest trades training centre in British Columbia. Our programs are designed to prepare students to enter employment, and to provide them with employment upgrading and retraining opportunities. The Institute provides extensive training options in Aviation Trades, Building Design and Construction Trades, Electrical Trades, Mechanical Industry Training, Metal Industry Training, Drafting, and Food and Hospitality Trades.

Office of the Registrar

Mario Mazziotti, Dipl.T., Registrar
Mike Powley, B.Ed., M.B.A., Acting Assistant Registrar
Angela Evans, Cert.Comp.Syst., Systems Assistant

Registration

Kelly Durkin, Supervisor
General enquiries: 434-1610

Admissions

Brenda Walton, Supervisor
Application enquiries: 432-8419

Student Records

Jeri Fostvelt, Supervisor
General enquiries: 432-8478

Timetabling

George Brown, Supervisor
General enquiries: 434-5734 (5386)

Admissions

Admission is on a first-come, first-served basis, and applicants are encouraged to apply early to avoid delays. Upon acceptance to a program, students will be asked to pay a non-refundable, non-transferable deposit with the remaining fees due by the first day of class. Students unable to pay their tuition fees should make financial arrangements prior to the start of class.

Applicant priority is given first to British Columbia residents who are Canadian Citizens and landed immigrants and have lived in British Columbia for the immediate twelve months prior to enrolment; second priority is given to out-of-province Canadian citizens and landed immigrants, third priority is given to out-of-country applicants. BCIT does not accept applications from persons on visitors visas.

All applicants must provide official documentary proof that they meet the necessary program prerequisites. Official transcripts are required; photocopies are not acceptable. Please note, students applying to BCIT are requested to submit all documentation with English translations in order to reduce the period required for evaluation.

Certificates

Certificates of Achievement will be granted to students who successfully complete their programs of study.

Academic Requirements

Guidelines are established for admission to ensure that you will be able to master the learning tasks covered in the program. Most of our programs require Grade 10 as a minimum, however, there are some that require specific Grade 12 subjects. All programs require students to have a good comprehension of the English language. Do not hesitate to apply if you feel your background and experience qualify you to enter any institute program. Appropriate combinations of education and experience are considered. Our only interest is your success. Grade 10 is accepted as a minimum entrance requirement for some of our programs, however, some employers may require Secondary School graduation for employment.

English Language Proficiency

All programs require students to have a good comprehension of the English language. Applicants whose first language is not English may be asked to provide test results from the Vancouver Community College, King Edward Campus, English Language Assessment Test.

Transfer from Regional Colleges

Students may transfer from regional colleges to some of our Entry Level Trades Training programs. An application form must be completed and forwarded to the Admissions Office with official transcripts showing successful course completion. Admission dates are subject to space available in the program. Fees are applied accordingly.

Credit for Completion of Career Preparation Programs in Secondary Schools

Memorandums of Understanding have been signed between the Institute and Boards of School Trustees for many school districts. Credit may be given to students who have completed the secondary school portion of the training, thus avoiding duplication of learning.

Continuous Entry Programs

Programs are offered throughout the year with varying start dates for each program. Students should contact the Program Advisors at 434-3304 for program information.

Fees and Expenses

Tuition fees for fixed-duration training programs vary according to the length of the program. Students accepted by any program must pay a non-transferable, non-refundable deposit to confirm a space. The full tuition fee must be paid on the first day of class. Additional costs will be required to cover textbooks, personal safety equipment and tools. The additional costs vary according to the program.

Student Activity Fee

A student activity fee is charged to students at the time of registration. The fee helps to support work, services and activities organized by the Student Association.

Miscellaneous Fees: Trades Programs

Certificate duplicate	\$10.00
Late fee/reinstatement fee	50.00
NSF cheques	15.00
Rereads, appeals	25.00
Student ID card duplicate	5.00
Transcripts, first copy	4.00
— Additional copy	1.00
Tax receipts, duplicate	10.00
T2202A forms, duplicate	10.00
Welding log books, duplicate	10.00

Refunds

Students who withdraw up to 14 calendar days after the start of classes are eligible for a full refund less the \$75 commitment fee. No refunds are given after this date. This also applies to students who are involuntarily withdrawn by the department due to poor performance or conduct.

Cancellations

The Institute will make every effort to offer all courses as listed in the calendar. Nevertheless, the Institute reserves the right to limit enrolment, to select students, to cancel courses, to combine classes or to alter time of instruction without prior notice.

CEIC (Manpower) Sponsorship

For information regarding the possibility of sponsorship, visit any local CEIC (Canada Manpower) office.

Apprenticeship Programs

For information on sponsorship in Apprenticeship training, contact the Ministry of Advanced Education and Job Training at 4946 Canada Way, Burnaby, B.C. V5G 4J6. Telephone: (604) 660-7200.

BCIT offers apprenticeship training in the following programs:

- Autoglass Installation
- Automotive Mechanic
- Baking
- Benchwork and Joinery (Cabinetmaker)
- Boilermaker
- Bricklaying
- Carpentry
- Commercial Transport Mechanic
- Cooking
- Drywall Finisher
- Electrical Motor Winder
- Electrical Work
- Electronics
- Floor Covering
- Glazier
- Heavy Duty Mechanics
- Inboard Outboard Mechanic
- Industrial Instrumentation
- Insulation Heat & Frost
- Ironworker
- L.M.I. Benchman
- L.M.I. Circular Saw Filer
- L.M.I. Saw Fitter
- Machinist
- Millwright
- Painting & Decorating
- Piledriver & Bridgeman
- Plumbing
- Practical Horticulture
- Refrigeration
- Sheet Metal
- Steamfitting & Pipefitting
- Steel Fabrication
- Tiletsetting
- Wall and Ceiling Installer
- Welding

Attendance

Regular and punctual attendance is essential for students to complete training and be granted a certificate. Students with poor attendance may not be permitted to write the final examination for the course, except in unusual circumstances such as excused absence. If students are absent for five (5) days without notifying the instructor, then it will be assumed they have withdrawn from training. For apprenticeship students, three or more days of unexcused absence will result in termination. Students are required to contact their departments when they are absent.

Entry Level Trades Training

Entry Level Trades Training (ELTT), BCIT's delivery of Provincial Training Access, is designed to give students the skills and practical knowledge required to get a job in one of the trade specialties. On successful completion of the program, you will receive certification and a detailed transcript documenting the skills and knowledge you have attained. In addition, you may receive credit for the first year of institutional training if you obtain apprenticeship employment.

Trade Specialties

The following trades training specialties are offered in the ELTT format:

Automotive Mechanic	Ironworker
Benchwork and Joinery (Cabinetmaker)	Machinist
Carpenter	Millwright
Commercial Transport Mechanic	Motorcycle Mechanic
Diesel Engine Mechanic	Plumber
Electrical	Sheet Metal Worker
Heavy Duty Mechanic	Steel Fabricator
Inboard/Outboard Mechanic	Small Engine
Steamfitter	Mechanic

For further information about the ELTT program, call Program Advising, 434-3304.

Entrance Requirements

Anyone over 16 who meets either of the two requirements listed below may enroll.

- Pass an entrance test in mathematics and reading skills.** Note: Those with minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will maintain their place on the waiting list but will be referred to another institution for upgrading before being admitted to the program.
- Submit documentation that you have one of the following:**
 - Successful completion of Career Preparation from a BC secondary school within the past 2 years
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past 3 years
 - Journeyman standing in a related trade
 - Completion of one English **and** one Math course with the stipulated mark as listed below.

Math	English
Math 10 with a B letter grade	English 10 with a B letter grade
Trades Math 11 with a B	English 11 with a C
Consumer Math 11 with a B	Composition 11 with a C
Algebra 11 with a C	Communications 11 with a C
Algebra 12 with a P	English 12 with a P
	Communications 12 with a C
	Literature 12 with a P

Some programs may require higher levels, see the appropriate specialty or call the ELTT office at (604) 432-8239 for additional information.

Program Description

ELTT is a competency based vocational training program. You will learn your trade in a series of small, clearly defined steps, or competencies. You will become fully proficient at each step before going on to the next one. ELTT is a practical, hands-on training system. You will be working in your shop area within the first week of entrance and the majority of your learning will be actual work in the shop. The theory you learn will be clearly related to your own trade, and you will learn it at the time that you need to apply it to practical activities.

You may begin the program the first Monday of each month, if there are spaces available. Although each specialty has a set duration (generally between 6 and 10 months) you may proceed through the program as quickly as you are able to master the skills, or you may be allowed to take up to 20% longer if you need to. Your fees will be based on the program length.

In addition to your technical skills and knowledge, you will learn and be evaluated on good work practices. Consequently, you will be expected to attend regularly and to work to industry standards.

Important Dates 1988-89 — Trades

BCIT is open except on statutory holidays.

1988

Fri July 1	CANADA DAY
Mon Aug 1	B.C. DAY
Mon Sept 5	LABOR DAY
Wed Sept 21	SHINERAMA
Mon Oct 10	THANKSGIVING
Fri Nov 11	REMEMBRANCE DAY
Thurs Dec 22	Last day of training for Trades non-apprentice students
Fri Dec 23	Last day of training for Trades apprentices
Fri Dec 23	BCIT closed
Sun Dec 25	CHRISTMAS DAY
Mon Dec 26	BCIT closed
Fri Dec 30	BCIT closed

1989

Sun Jan 1	NEW YEARS DAY
Mon Jan 2	BCIT closed
Tues Jan 3	Trades classes and apprentices begin

— English Language Proficiency	49
Pre-entry Courses	49
Technology Fundamentals Program	50
Industrial Education Teacher	
Education Program.....	50

The Educational Services Division consists of the Chemistry, Communication, Mathematics, Physics, Industrial Education Teacher Education, Part-time Studies, Basic Trades Skills and Development Centre departments and Learning Resource Centres. It offers courses and services to all students enrolled in technology programs offered by the Schools of Business, Engineering Technologies and Trades, and Health Sciences as well as courses and services for trades and part-time students. It also offers non-credit, pre-entry courses to students who need to upgrade their academic prerequisites for admission to BCIT.

Courses taught by the Educational Services Division departments include the "core" of knowledge and skills, both theoretical and applied, which students need in order to understand and make the best use of their specialized technological training. Academic support courses are developed in conjunction with technology departments and advisory committees, and maintain an appropriate balance between applied and theoretical content.

Part-time Studies

Debbie Saxby, Program Assistant

The Educational Services Division offers Communication, Chemistry, Mathematics and Physics' course components for full-time and part-time programs.

Pre-entry courses are offered throughout the year to students needing entrance requirements for BCIT. These courses will be of interest to mature students who need refreshers, or to students who do not have the necessary prerequisites for entrance into BCIT programs.

Academic support courses are offered throughout the year in many forms:

- as part-time evening classes
- as part of full-time program requirements.
- as part-time, day-time classes (usually in the summer term)
- as integrated 15 week packages (through Technology Fundamentals, in both September and January)

Interested students are encouraged to call 432-8458 for further information.

Special In-House Communication Courses

All BCIT Communication courses can be delivered in-house for interested groups in 3-day, week-long, or other flexible formats. These are practical courses designed to help you write effectively on the job. Special courses can also be designed to meet your company's communication requirements. Instructors will conduct needs assessments in your company and design relevant course materials. Please call the Communication Department at 432-8387 for more information.

English Language Proficiency

Students enrolling in Part-time Communication courses who have severe language difficulties may be referred to other, more appropriate courses.

Pre-entry Courses

Pre-entry courses are individual day or night courses available for students who lack the necessary prerequisites to apply for their chosen technology programs, or for those who wish to prepare for a full-time workload.

Pre-entry courses are offered in each of the BCIT terms: September, January, April and throughout the summer months. Check the Part-time Studies flyer for dates, or phone 432-8458.

The following Pre-entry courses are offered to those who need prerequisites or who wish to improve their existing grades:

Technical Mathematics: Introduction — For the School of Health Sciences and the School of Engineering Technologies and Trades.

Effective Writing —
and

Independent Learning Skills — Preparation courses for every Technology

Comprehensive Reading, Writing and Learning Skills — Preparation courses for every technology and BCIT equivalent of English 12 for every Technology

Technical English as a Second Language — Equivalent to BCIT's English Language requirement for second language students.

Chemistry — Chemistry 11

Physics — Physics 11

Course Descriptions

Chemistry

CHEM 001 Pre-entry Chemistry 1 — An upgrading course for people whose background in chemistry is weak, and a refresher course for those who have not studied chemistry for several years. Meets the Chemistry 11 program entrance requirements for BCIT. **non credit**

CHEM 101 Applied Chemical Principles 1 — Provides the necessary background for chemical calculations and analysis. Included are stoichiometry, atomic structure, bonding, solution preparation and acid-base and oxidation-reduction reactions and their titrations. Lab work consists of qualitative and quantitative analysis. This course meets the Chemistry 12 entrance requirement for BCIT. Prerequisite: Chemistry 11 or CHEM 001. **6 credits**

Communication

COMM 001 Effective Writing — Develops the basic skills needed for the business and technical writing at BCIT. This 24-hour course prepares you for the heavy writing requirements in day school programs. You will find it especially useful if you are uncertain of your skills in business and technical writing. Topics include organization, paragraph development and effective sentences in letter and memo writing. **non credit**

COMM 002 Independent Learning Skills — This course teaches you how to study on your own, manage your time, cope with heavy workloads and get the most from new instructional techniques. It includes reading textbooks, learning from objectives, using computer-managed learning packages, reading efficiently, completing assignments, taking exams successfully and managing your time. Especially useful for students entering the Electronics options. **non credit**

COMM 003 Comprehensive Reading, Writing and Learning Skills — An integrated 80 hour course which emphasizes the reading, writing and study skills needed for entering a full-time program at BCIT. This course covers all the topics outlined in COMM 001 and COMM 002 as well as speed reading, reading comprehension, library research and short report formats. If your mark in B.C. English 12 does not meet BCIT's entrance requirements, 65% or better in this course will meet BCIT's C in English 12 entrance requirement for day school programs.

non credit

COMM 004 Technical English as a Second Language — This 80-hour course is for students whose first language is not English, who have studied English, but need practice in applying their language skills to technical studies or need to upgrade their English to meet the Institute's English language requirement. This integrated language course focuses on the reading, writing, listening and speaking skills required for technical communication and will include reading efficiency, vocabulary expansion, sentence and paragraph development. 65% or better in this course will meet BCIT's English language entrance requirement for day school programs.

non credit

Mathematics

MATH 001 Technical Mathematics — An upgrading refresher course for students who have not completed high school math, or have completed it more than three years previously, or whose math background is otherwise weak. This course meets Algebra 12 entrance requirements at BCIT. Students intending to enter a technology which requires an Algebra 12 grade of C+ or better, must achieve a final mark of 65% or higher in MATH 001. Prerequisite: C or better in Algebra 11 or approved equivalent math course.

non credit

MATH 002 Technical Mathematics — Introduction (Correspondence) — Flexible entry correspondence course that satisfies the Algebra 12 entrance requirements for BCIT. Students intending to enter a BCIT technology which requires an Algebra 12 grade of C+ or better must achieve a final mark of 65% or higher in MATH 002! Students who have difficulty with mathematics or those who have been away from school more than three years are advised to take the classroom course (see P/T offering — MATH 001). Prerequisite: a pass in Algebra 11 or an approved equivalent mathematics course.

non credit

Physics

PHYS 009 Pre-entry Physics — This course is designed for those students who lack the physics prerequisite to enter their chosen technologies or those who anticipate difficulty in passing the physics course associated with their technology. The course offers an introduction to physics, its basic principles and common applications. Approximately two-thirds of the course deals with mechanics, the remainder with heat and geometric optics. Problem solving techniques are emphasized. Prerequisite: you are advised to have completed any necessary mathematics upgrading courses BEFORE taking PHYS 009.

non credit

Technology Fundamentals Program

Technology Fundamentals is an upgrading program to assist full-time studies applicants who lack some or all of the prerequisites for admission into BCIT programs.

Technology Fundamentals is a full-time, day school program (Monday through Friday) beginning in September and January, and running for 15 weeks.

Applicants for admission into Technology Fundamentals must indicate which BCIT Technology program they are applying for and which session (September or January) of the Technology Fundamentals program they wish to enroll in. Technology Fundamentals application forms must also have all necessary documents attached.

Technology Fundamentals students may be guaranteed entry to the full-time technology program of their choice, subject to successful completion of the Technology Fundamentals program. The participating technologies include:

School of Engineering Technologies and Trades

- Biological Sciences
- Building
- Chemical Sciences
- Civil and Structural
- Electronics
- Forestry
- Mechanical
- Mechanical Systems
- Mining
- Petroleum
- Surveying
- Wood Products Manufacturing

School of Health Sciences

- Health Information Technology
- Health Record Technician
- Occupational Health and Safety

For further information contact 434-3304.

Industrial Education Teacher Education Program

In BCIT's Industrial Education Teacher Education (IETE) program students acquire the technical, basic pedagogical skills and knowledge to teach industrial education in B.C. junior and senior secondary schools. The program may also lead to trades teaching at the post-secondary level when combined with a trades qualification.

Regular Program

IETE is a two-year program that provides the student with the content qualifications to teach the five industrial education areas in the B.C. curriculum at the junior secondary level, and one or two of these areas plus Technology 11/12 at the senior secondary level. The five areas are drafting, woodworking, metalworking, electronics and power mechanics/automotive.

In addition to the two-year BCIT program, students intending to teach in secondary schools will also be required to obtain a B.Ed. degree which, under an agreement with UBC, will normally take an additional three years. The first of these years consists of first-year general university courses, which the applicant is encouraged to take before applying to BCIT; the final two consist of senior level university academic and education courses. Applicants should contact the Admissions Office at UBC regarding admissibility to that institution.

The BCIT program is open to graduates of secondary schools with good English and Mathematics skills. Preference will be given to applicants with trades experience and/or first year university transfer courses completed.

Accelerated Program

Applicants with journeyman standing or equivalent in a trade or technology related to one of the five IE subject areas, who meet the requirements of the regular program, may enter the accelerated program, which is designed to permit successful students to begin teaching with provisional certification after two years or less. Completion of the requirements for the B.Ed. degree and professional certification may be completed through part-time evening and summer courses.

Program Changes

Since the IETE program is currently under review, some changes may be instituted for the 1988/89 academic year. Applicants should contact the Program Head, Industrial Education Teacher Education at BCIT for further information: 432-8274.

Course Descriptions

INED 510/610 Principles of Industrial Design — Covers the basic principles of design, relationship between design and manufacturing processes, aesthetic elements of design, design in classroom projects.

INED 520/620 Introduction to Teaching Technical Drawing — Covers the basic concepts and skills taught in drafting courses at the junior secondary level: understanding the content and philosophy of the drafting curriculum, using projects as a teaching tool, integrating drafting and design with projects in other subjects, effective use of equipment and materials, introduction to using computers in the drafting classroom.

INED 530/630 Introduction to Teaching Woodworking — Covers the junior secondary woodworking curriculum, equipment, materials and skills necessary to teach wood, plastic and other soft materials at the junior secondary level; safe use and maintenance of light and heavy machinery with the adolescent student; shop management, including management of individually produced student projects.

INED 540/640 Introduction to Teaching Metalworking — Covers the junior secondary metalworking curriculum, equipment, materials and skills necessary to teach metal materials at the junior secondary level; maintenance and safe use of light and heavy machinery and high temperature processes with the adolescent student; management of student projects.

INED 550/650 Teaching Power Mechanics — Covers the mechanics of various power sources from the internal combustion engine to turbines, transmission of power and principles of power application; design of projects for the study of power with application to mechanics shops and technology courses in the B.C. secondary curriculum.

INED 560/660 Introduction to Teaching Electricity and Electronics — Covers the junior secondary electrical and electronics curriculum, basic concepts of electricity and electronics taught at the junior secondary level; the use of experiments and projects for teaching electronics, electrical shop control, planning and safety, effective use of equipment and materials.

INED 570/670 Technology of Materials — Covers the properties of all materials commonly used in the school shop and their educational uses, materials testing, safe uses of materials in the shop, specific application to teaching technology courses at the secondary level. Prerequisite: INED 510, INED 520, INED 530, INED 540, INED 550 (may be taken concurrently).

INED 580/680 Projects — Directed studies and research projects in IE subject areas.

INED 710/810 Advanced Design — Covers the elements of industrial design as they affect manufacturing processes and large student projects. Prerequisite: INED 610.

INED 720/820 Teaching Advanced Technical Drawing — Covers the concepts and skills taught in drafting courses at the senior secondary level and in Career Preparation programs, the use of CAD in drafting courses, advanced projects. Prerequisite: INED 620.

INED 730/830 Teaching Advanced Woodworking — Covers the equipment, materials and skills necessary to teach wood, plastic and other soft materials at the senior secondary level for Industrial Education and career preparation students; management of large and mass produced student projects, uses of plastics and less common materials. Prerequisite: INED 630.

INED 740/840 Teaching Advanced Metalworking — Covers the equipment, materials and skills necessary to teach metal materials at the senior secondary level; casting, forging and other work in light and heavy metals, advanced machining and NC/CNC machining. Prerequisite: INED 640.

INED 750/850 Teaching the General Automotive Shop — Covers the skills students need to master in senior and career preparation automotive shops, shop management, supervising student work on clients' cars. Prerequisite: INED 650.

INED 760/860 Teaching Advanced Electronics — Covers the concepts of electronics taught at the senior secondary level, the use of experiments and projects for teaching linear, digital and microprocessor materials and projects. Prerequisite: INED 660.

A number of specialized advanced courses will be offered during summer and evening sessions. These courses will enable teachers to upgrade specialized skills and add new teaching areas.

ADMINISTRATIVE SYSTEMS

Management Systems
Business Administration
Human Resource Systems
Human Resource Management Systems
International Trade
Operations Management
Transportation and Distribution

The Administrative Systems Technology offers five distinct diploma programs: Management Systems, Human Resource Systems, International Trade, Operations Management and Transportation/Distribution. The technology also offers two post-diploma programs: Business Administration and Human Resource Management Systems.

POTENTIAL STUDENTS SHOULD SCRUTINIZE THESE PROGRAMS CAREFULLY TO ASCERTAIN WHICH FIELD OF STUDIES THEY WISH TO PURSUE AND MUST APPLY FOR THE SPECIFIC PROGRAM OF THEIR CHOICE.

Management Systems

This program is designed to enable managers to develop the knowledge and skills necessary to meet the continuing need for microcomputer applications in business. The student is provided with a solid core of instruction in management, finance, marketing and production, together with courses which will develop managers who can implement and use microcomputer-based, integrated planning and control systems.

Job Opportunities

The decentralization of office automation and decision support systems into the hands of individual users creates a need for people with managerial and microcomputer applications skills in all areas of a business organization. Graduates of the Management Systems program work in planning, banking, finance, production and marketing in companies of all sizes; many operate their own businesses.

The Program

Following a year of core business courses, students specialize in Administrative Systems or Personnel and Industrial Relations as second year options. See the calendar description of this program for full information, including special prerequisites.

Students who continue in the Management Systems program will generally follow the course of studies shown as Levels 1 through 4, with some changes in the offerings and order of courses as the program is revised and updated to reflect changes in business and industry.

Students in courses such as ADMN 190 and ADMN 360 who have access to microcomputers outside the Institute will find this beneficial, and should so advise their instructors.

Prerequisites

Algebra 11 and English 12, both with C+ or better, are required for this program. Enrolment is limited. Applicants should apply early, stating full details of work experience and outlining extra-curricular activities. Appropriate business experience and/or other successful post-secondary education will greatly strengthen applications. Applicants should be good communicators and people oriented, with a willingness to work effectively with fellow workers and the public.

Admission may be granted to mature students who can provide evidence of probable success in the program.

Direct Entry and Certificates

Direct entry into the second year of the program is possible when space is available, provided students have prerequisite first year courses and other suitable education or experience.

Students may qualify for a Certificate in Management Systems by completing a total of 15 courses (full term), with a minimum of 10 courses from Levels 3 and 4. The student's program must be agreed to between the student and the department, to suit the student's career goals.

Post-graduation

Graduates may earn advance credit towards designation as a Chartered Accountant, a Certified General Accountant, or a Registered Industrial Accountant. Advance credit is also given by the Institute of Chartered Secretaries and Administrators.

ADMN 420	Selected Topics in Business	*5.0
ADMN 462	Microcomputer Software Applications.....	*5.0

* Half Term Courses

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource market. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 110 Management 1 — A study of the management functions of planning, organizing and staffing. Included are such topics as forms of business ownership, tactical and strategic planning, decision-making, structuring the organization and providing human resources. Emphasis is varied depending on the technology for which the course is provided. Students are given the opportunity to develop analytical and communications skills by analyzing and presenting solutions to typical business problems.

ADMN 190 Microcomputer Skills — An introduction to micro-computers and software. Students become familiar with software programs to be used in other program areas.

ADMN 200 Macroeconomics — Develops an understanding of the organization and operation of the Canadian Economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income employment, inflation, money and banking, international trade, and growth. An appreciation of the relationship between economic theory and economic policy is provided. Prerequisite: ADMN 100.

ADMN 211 Management 2 — A continuation of ADMN 110. The management functions of leading and controlling are emphasized. Topics include motivation, leadership, production planning and control, and budgeting. Prerequisite: ADMN 110

ADMN 217 Workshop — Students working in small groups, contact a business or service organization to gather complete information on the organization — its history, organizational structure, financial background, product/service, scope of operation, and marketing strategy. This information is presented to the class using audio visual techniques. Benefits to the students are a better understanding of the application of management theory and organization, and practice in formal class presentation.

ADMN 220 Organizational Behavior — The study of factors that either influence or are influenced by people at work. The course will focus on macro factors such as organizational structure, technology and environment; group factors such as group dynamics, leadership, conflict and decision making; and micro or individual factors such as attitudes, perception and motivation.

ADMN 310 Management Science — Emphasizes the use of decision-making models in business. Trains students in the use of quantitative methods when selecting alternatives in the decision-making process. Prerequisite: OPMT 110, OPMT 130.

ADMN 330 Industrial Relations — A detailed analysis of selected labor/management problem areas with emphasis on the solution of practical problems in industrial relations.

ADMN 340 Personnel Administration — An introduction to the fundamentals of personnel management, including organization of the personnel function, salary administration, fringe benefits, training, management development and performance appraisal, constructive discipline, grievances and morale. Prerequisite: ADMN 222.

ADMN 360 Microcomputer Software Systems (MS-DOS) — Instruction and practice with commercially advanced micro-computer software systems. Topics currently include integrated programs, the MS-DOS environment, and databases. Prerequisite: ADMN 190

ADMN 385 Business Law — A one-term, condensed course which acquaints the business student with basic knowledge of Canadian law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

ADMN 410 Management Policy — An analysis of business policy formulation designed to give the student practice, experience and confidence in handling complex business situations where basic policy decisions are necessary to assist in problem solving. Comprehensive business cases will be selected covering such fields as finance, control, personnel, production, marketing and general management, for study and discussion. The course acquaints the student with the role of top management and the interrelationships between these fields. Prerequisite: All Level 1, 2 and 3 courses, or permission of Department Head.

ADMN 420 Selected Topics in Business — Exposes students to important issues for Canadian and British Columbian business. Content will vary from year to year, depending upon current events.

ADMN 460 Microcomputer Software Systems — A continuation of ADMN 360 with emphasis on applying software to practical business problems. Students will learn the process of developing a software application: problem definition, design and development, and implementation. Prerequisite: ADMN 360, FMGT 201, OPMT 110.

ADMN 462 Microcomputer Software Applications — A nine week extension of ADMN 360 that currently focuses on the Macintosh computer. Topics will vary but currently include basic business applications and an introduction to desk top publishing. Prerequisite: ADMN 360.

ADMN 490 Directed Studies — Designed to give students some practical application of concepts learned in major program areas by engaging in problem-solving projects in business or government. Prerequisite: All courses in Levels 1, 2 and 3, or permission of the Department Head.

BCOM 102 Business Communication for Management Systems — This is an applied business communication course for Management Systems. Students develop the skills required to write effective letters and memos used in business and industry. Students also receive instruction in preparing and giving oral presentations.

BCOM 202 Business Communication for Management Systems — Gives further instruction and practice in the principles taught in BCOM 102. The course concentrates on more sophisticated forms of written communication: the job application package, informational and analytical reports, and research proposals. It also includes modules on graphics, questionnaires, telephone techniques, organizing and running meetings, and using word processors. Prerequisite: BCOM 102.

COMP 100 Data Processing: Introduction — Offers training in basic data processing principles to develop recognition of the application of these principles to industry. The principal functions of data processing are illustrated and practised with an H.P. minicomputer operating interactively. Elementary computer programs are written and tested on the computer. Use of flow-charting and elementary data processing systems design will illustrate the achievement of data processing objectives.

COMP 120 Computers in Business — Designed to give the student an understanding of business computer systems. Topics include computer hardware — types, usage, evaluation; systems development — feasibility studies, analysis, design, implementation; packaged software — use and evaluation. Emphasis will be placed on areas of particular interest to specific technologies. Prerequisite: COMP 100.

FMGT 101 Accounting 1 — Permits persons with little or no accounting background to become familiar with the techniques of working through the full accounting cycle. It provides theoretical and practical training in basic accounting as preparation for FMGT 201. Topics include accounting as an information system; introduction to accounting theory; income measurement; traditional record-keeping procedures; the accounting cycle; special journals; cash; investments and receivables.

FMGT 201 Accounting 2 — The follow-up to FMGT 101, topics include inventory, long-lived assets, liabilities, forms of business organizations, cash-flow and working capital analysis, manufacturing accounting, management accounting, consolidated statements, analysis of financial statements and price level changes. Prerequisite: FMGT 101.

FMGT 304 Management Accounting — The management accountant's role in decision making, planning and control of company operations through budgeting, standard costing and evaluation systems. Emphasis is on alternative methods for product costing, cost allocations, performance measurement and decision-making models. Prerequisite: FMGT 201.

FMGT 307 Finance 1 — Those with little or no knowledge of financial management will study the various methods of optimizing the economic position of a firm. Middle management people in business finance will learn to make the best decisions on the financing of a firm. Topics include control and financial management of the business firm, profit planning, cash and capital budgeting and inventory control. Prerequisite: FMGT 201.

FMGT 404 Finance 2 — Instructs students in raising capital to finance a firm. Topics include the cost of capital; short, medium and long term financing leasing; refinancing; security analysis; the Canadian capital and money markets and pension portfolios as they affect business decisions of Canadian firms. Prerequisite: FMGT 307.

MKTG 102 Introduction to Marketing — Includes a detailed study of basic marketing functions, market research, product planning, selection of trade channels, merchandising, advertising, sales promotion and salesmanship. Marketing of consumer goods as well as industrial goods will be covered.

MKTG 334 Applied Marketing and Selling — The focus is on applying the marketing concepts from the introductory marketing course. Emphasizes the development of personal selling skills. Students will develop a comprehensive plan for marketing and selling a product or service. Prerequisite: MKTG 102.

OPMT 110 Business Mathematics — Review of the basic mathematics applicable to business and industry. Mathematics of finance including retail operations, simple and compound interest, discounts, annuities, financial papers and depreciation methods. Emphasis is on practical applications to business administration.

OPMT 130 Business Statistics — Major emphasis is on descriptive statistics, including numerical and graphical presentation of data, measures of central tendency and dispersion, elementary probability, index numbers and time series. Introduction to inferential statistics is provided through selected topics such as sampling, confidence limits of the mean, hypotheses testing and simple linear regression.

OPMT 170 Management Engineering — An industrial engineering approach to problem solving with particular application to administrative management problems. Includes method study, charting and analysis, work measurement, facility layout. Also provides training in production and inventory management. Prerequisite: OPMT 110

TDMT 352 Transportation — Designed to give students a basic understanding of the operation of the four modes of transportation. The course highlights municipal, provincial and federal regulations/deregulations, and introduces students to the essentials of freight rate applications and waybill audit. The course is tailored to users of transportation services. Prerequisite: OPMT 110, ADMN 385.

Business Administration

Post-diploma Program

Following some experience in the work force, engineering and health technologists may assume supervisory and managerial responsibilities. Although well-versed in the technical aspects of their fields, they could, in most cases, benefit from further training in business management to be effective administrators. To fulfill this training need, BCIT has developed a full-time diploma program in business management for graduates from health and engineering technologies or equivalent.

The Program

The nine month program includes such basic business subjects as management accounting, economics, marketing, law, personnel administration, data processing and microcomputer software applications. These courses will give students a thorough understanding of current business practice enabling them to apply a disciplined and professional approach to management. Lectures are supplemented by case studies and group discussions throughout the program. All students are required to carry a full course load each term.

Prerequisite

Diploma of Technology in Health or Engineering, or equivalent. Applicants should be interested in supervisory and managerial positions, or operating their own businesses. Previous business experience is preferable, but not mandatory.

Post-graduation

Graduates of this diploma program may work towards accreditation as a Certified Administrative Manager through the Administrative Management Society.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource market. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 200 Macroeconomics — Develops and understanding of the organization and operation of the Canadian Economy in an International setting. The theoretical tools of the economist are used to expend the concepts of national income employment, inflation, money and banking international trade, and growth. An appreciation of the relationship between economic theory and economic policy is provided. Prerequisite: ADMN 100.

ADMN 310 Management Science — Emphasizes the use of decision-making models in business. It is designed to train students in the use of quantitative methods in the choice of alternatives in the decision-making process. Microcomputers will be used to solve problems.

ADMN 342 Human Resource Management — An introduction to the major personnel and industrial relations programs applicable to the British Columbia workplace with emphasis on the value of the worker and the overall effectiveness of modern human resource management. It develops understanding of the skills required for selection interviews, performance appraisals, compensation reviews, labor contract negotiations, training and development programs, grievance and collective agreement administration and reviews relevant employment law.

ADMN 361 Microcomputer Software Systems — An introduction to the use of applications software on the microcomputer. Topics include word processing, business graphics, spreadsheets, and databases on one or more operating systems.

ADMN 385 Business Law — A one-term, condensed course which acquaints the business student with a basic knowledge of Canadian law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

ADMN 410 Management Policy — An analysis of business policy formulation designed to give the student practice, experience and confidence in handling business situations, including those of a complex nature where basic policy decisions are necessary to assist in problem solving. Comprehensive business cases will be selected covering such fields as finance, control, personnel, production, marketing and general management, for study and discussion. The course is designed to acquaint the student with the role of top management and the interrelationships between these fields. Prerequisite: All level 5 courses or permission of the instructor.

ADMN 461 Microcomputer Software Applications — A continuation of Microcomputer Software Systems, with emphasis on the solution of practical problems. Students will become familiar with word processing, data base and spread sheet programs on the IBM-PC system. Familiarity with the programs is developed enabling students to use them in other course areas. Prerequisite: ADMN 361.

ADMN 620 Organizational Behavior — The study of factors that either influence or are influenced by people at work. The course will focus on macro factors such as organizational structure, technology and environment; group factors such as conflict and decisions making; and micro or individual factors such as attitudes, perception and motivation.

BCOM 302 Advanced Communication — As future managers, students learn to retrieve, extract and report information efficiently. Building on skills acquired in previous Communication courses, this course emphasizes improving persuasive writing and speaking skills, especially proposal writing.

COMP 213 Computers and Information Systems — Basic data processing principles; flow charting, analysing information requirements, report analysis and design. Computer hardware and software; main frames, minis, micros and peripheral devices. Operating systems hardware and software requirements for various operations. Basic programming for those students with no previous experience.

FMGT 519 Financial Management 1 — Basic accounting procedures; closing the books; adjustments; working papers; merchandise operations; statement and ledger organization; special journals; forms of business organization; accounting principles; introduction to cost accounting; analysis of financial data; working capital; departmental and branch operations; consolidations.

FMGT 619 Financial Management 2 — see FMGT 519. Prerequisite: FMGT 519.

MKTG 102 Introduction to Marketing — An introduction to the marketing environment and marketing institutions. Detailed study of the basic marketing functions, marketing research, product planning, selection of trade channels, merchandising, advertising, sales promotion and salesmanship. Embraces marketing of consumer goods, as well as industrial goods.

OPMT 510 Business Mathematics — Review of basic mathematics applicable to business and industry; mathematics of finance, including retail operations, simple and compound interest, discounts, annuities, financial papers and depreciation methods. Emphasis is on practical applications to business administration.

Human Resource Systems

One of the most important skills for future supervisors and managers to obtain is the ability to motivate others so that the productivity of the enterprise is enhanced.

This program is designed for those who are interested in developing these specialized abilities who wish to make a career in human resource management and line management.

Students will be exposed to the latest developments in human resource management. They will develop interviewing and selection skills, interpersonal skills, training and development skills; and the use of computers in human resource management and collective bargaining.

Job Opportunities

Graduates of this program will be involved in selection and placement, training and development, labor/management relations, job evaluation, benefit administration and organization renewal and development. As well, graduates qualify for management training programs offered by various organizations.

The Program

Following a year of core business courses, students continue in the Human Resource Systems program or the Management Systems program.

Students who enter the Human Resource Systems program will generally follow the course of studies shown as Levels 1 through 4, with some changes in the offerings and order of courses as the department revises and updates the program to reflect changes in business and industry.

Prerequisites

Algebra 11 and English 12, both with C+ or better, are required for this program. Enrolment is limited. Applicants should apply early, stating full details of work experience and outlining extra-curricular activities. Appropriate business experience and/or other successful post-secondary education will greatly strengthen applications. Applicants should be good communicators and people oriented, with a willingness to work effectively with fellow workers and the public.

Admission may be granted to mature students who can provide evidence of probable success in the program.

Specific Prerequisites

Those students wishing to enter the Human Resource Systems Management program from the first year of the technology program should have maturity and relevant work experience. They must also be competent in communication skills, as demonstrated by a minimum of 70% standing in the first year communication courses.

Direct Entry and Certificates

Direct entry into second year courses in this program is possible, provided students have prerequisite first year courses and other suitable education or experience.

Students may qualify for a Certificate in Human Resource Systems by completing a total of 15 courses (full term), with a minimum of 10 courses from Levels 3 and 4. The student's program must be agreed to between the student and the department to suit the student's career goals.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource market. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 110 Management 1 — A study of the management functions of planning, organizing and staffing. Included are such topics as forms of business ownership, tactical and strategic planning, decision-making, structuring the organization and providing human resources. Emphasis is varied depending on the technology for which the course is provided. Students are given the opportunity to develop analytical and communications skills by analyzing and presenting solutions to typical business problems.

ADMN 190 Microcomputer Skills — An introduction to microcomputers and software. Students become familiar with software programs to be used in other program areas.

ADMN 200 Macroeconomics — Develops an understanding of the organization and operation of the Canadian Economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income employment, inflation, money and banking, international trade, and growth. An appreciation of the relationship between economic theory and economic policy is provided. Prerequisite: ADMN 100.

ADMN 211 Management 2 — A continuation of ADMN 110. The management functions and practices of leading and controlling are emphasized. Topics include motivation, leadership, production planning and control, and budgeting. Prerequisite: ADMN 110

ADMN 217 Workshop — Students working in small groups, contact a business or service organization to gather complete information on the organization — its history, organizational structure, financial background, product/service, scope of operation, and marketing strategy. This information is presented to the class using audio visual techniques. Benefits to the students are a better understanding of the application of management theory and organization, and practice in formal class presentation.

ADMN 220 Organizational Behavior — The study of factors that either influence or are influenced by people at work. The course will focus on macro factors such as organizational structure, technology and environment; group factors such as group dynamics, leadership, conflict and decision making; and micro or individual factors such as attitudes, perception and motivation.

ADMN 310 Management Science — Emphasizes the use of decision-making models in business. Trains students in the use of quantitative methods in the choice of alternatives in the decision-making process. Prerequisite: OPMT 110, OPMT 130.

ADMN 321 Interpersonal Skills Development — This lab concentrates on the development of skills for personnel problem solving. It emphasizes role-play training with students in advisory capacities, helping management and employees to resolve human resource management problems.

Prerequisite: ADMN 222.

ADMN 330 Industrial Relations — A detailed analysis of selected labor/management problem areas with emphasis on the solution of practical problems in industrial relations.

ADMN 341 Human Resource Planning and Analysis — An introduction to the skills and concepts associated with employee data collection and analysis for strategic and human resource planning purposes. Employment planning models, job analysis techniques and statistical methods of measurement are addressed.

ADMN 346 Compensation Management — A review of contemporary compensation management issues such as pay equity, pay compression and confidentiality and wage and salary administration techniques, including job analysis, job evaluation, compensation surveys, and pay-for-performance systems.

ADMN 360 Microcomputer Software Systems (MS-DOS) — Instruction and practice with commercially advanced microcomputer software systems. Topics currently include integrated programs, the MS-DOS environment, and databases. Prerequisite: ADMN 190

ADMN 385 Business Law — A one-term, condensed course which acquaints the business student with basic knowledge of Canadian law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

ADMN 410 Management Policy — An analysis of business policy formulation designed to give the student practice, experience and confidence in handling complex business situations where basic policy decisions are necessary to assist in problem solving. Comprehensive business cases will be selected covering such fields as finance, control, personnel, production, marketing and general management, for study and discussion. The course acquaints the student with the role of top management and the interrelationships between these fields. Prerequisite: All Level 1, 2 and 3 courses, or permission of Department Head.

ADMN 430 Collective Bargaining — An introductory analysis of the fundamental issues and facts of labor-management relations. Special emphasis is given to collective agreement content and interpretation, bargaining and basic labour economics. Prerequisite: ADMN 330.

ADMN 440 Personnel Management Systems — Develops competence in several key personnel practitioner areas, including job evaluation techniques, wage and salary administration functions, and performance appraisal techniques. Two hours a week of microcomputer applications laboratory time are included for preparation of course assignments that use microcomputer applications. Prerequisite: ADMN 340.

ADMN 441 Interviewing Skills — A skills development course emphasizing the interpersonal skills necessary for successful selection interviews. Training techniques include role-playing, individual counselling and feedback. Prerequisite: ADMN 321 and 340.

ADMN 442 Training and Development — Develops ability to design and implement a training program with emphasis on practical problems of training in industry. Prerequisite: ADMN 321 and 340.

ADMN 447 Benefits Administration — Benefits planning from a total compensation perspective. A review of various benefit plans, including health and insurance, pension, stock/share purchase, RRSP's, paid time off, workers compensation; and contemporary issues such as pension reform and mandatory retirement.

ADMN 490 Directed Studies — Designed to give students some practical application of concepts learned in major program areas by engaging in problem-solving projects in business or government. Prerequisite: All courses in Levels 1, 2 and 3, or permission of the Department Head.

BCOM 102 Business Communication for Management Systems — This is an applied business communication course for Management Systems. Students develop the skills required to write effective letters and memos used in business and industry. Students also receive instruction in preparing and giving oral presentations.

BCOM 202 Business Communication for Management Systems — Gives further instruction and practice in the principles taught in BCOM 102. The course concentrates on more sophisticated forms of written communication: the job application package, informational and analytical reports, and research proposals. It also includes modules on graphics, questionnaires, telephone techniques, organizing and running meetings, and using word processors. Prerequisite: BCOM 102.

COMP 100 Data Processing: Introduction — Offers training in basic data processing principles to develop recognition of the application of these principles to industry. The principal functions of data processing are illustrated and practised with an H.P. minicomputer operating interactively. Elementary computer programs are written and tested on the computer. Use of flow-charting and elementary data processing systems design will illustrate the achievement of data processing objectives.

COMP 120 Computers in Business — Designed to give the student an understanding of business computer systems. Topics include computer hardware — types, usage, evaluation; systems development — feasibility studies, analysis, design, implementation; packaged software — use and evaluation. Emphasis will be placed on areas of particular interest to specific technologies. Prerequisite: COMP 100.

FMGT 101 Accounting 1 — Permits persons with little or no accounting background to become familiar with the techniques of working through the full accounting cycle. It provides theoretical and practical training in basic accounting as preparation for FMGT 201. Topics include accounting as an information system; introduction to accounting theory; income measurement; traditional record-keeping procedures; the accounting cycle; special journals; cash; investments and receivables.

FMGT 201 Accounting 2 — The follow-up to FMGT 101, topics include inventory, long-lived assets, liabilities, forms of business organizations, cash-flow and working capital analysis, manufacturing accounting, management accounting, consolidated statements, analysis of financial statements and price level changes. Prerequisite: FMGT 101.

FMGT 307 Finance 1 — Those with little or no knowledge of financial management will study the various methods of optimizing the economic position of a firm. Middle management people in business finance will learn to make the best decisions on the financing of a firm. Topics include control and financial management of the business firm, profit planning, cash and capital budgeting and inventory control. Prerequisite: FMGT 201.

FMGT 404 Finance 2 — Instructs students in raising capital to finance a firm. Topics include the cost of capital; short, medium and long term financing leasing; refinancing; security analysis; the Canadian capital and money markets and pension portfolios as they affect business decisions of Canadian firms. Prerequisite: FMGT 307.

MKTG 102 Introduction to Marketing — Includes a detailed study of basic marketing functions, market research, product planning, selection of trade channels, merchandising, advertising, sales promotion and salesmanship. Marketing of consumer goods as well as industrial goods will be covered.

OPMT 110 Business Mathematics — Review of the basic mathematics applicable to business and industry. Mathematics of finance including retail operations, simple and compound interest, discounts, annuities, financial papers and depreciation methods. Emphasizes practical applications to business administration.

OPMT 130 Business Statistics — Major emphasis is on descriptive statistics, including numerical and graphical presentation of data, measures of central tendency and dispersion, elementary probability, index numbers and time series. Introduction to inferential statistics is provided through selected topics such as sampling, confidence limits of the mean, hypotheses testing and simple linear regression.

OPMT 170 Management Engineering — An industrial engineering approach to problem solving with particular application to administrative management problems. Includes method study, charting and analysis, work measurement, facility layout. Also provides training in production and inventory management. Prerequisite: OPMT 110.

Human Resource Management Systems

Post-diploma Program

Following some experience in the workforce, Engineering and Health technology graduates or university graduates may be about to assume supervisory and management responsibilities. In many cases this will involve specific responsibility for industrial relations or other aspects of human resource management. Some of these graduates may wish to qualify for a career in human resource management. To meet these requirements, a full-time Diploma Program has been developed.

The Program

The program consists of 9 months study with an emphasis on personnel administration and labor relations; it also includes general management subject areas. Students are required to carry a full course load each term. Depending on previous courses taken, a student may be asked to substitute other courses for some of those shown below. Lectures are supplemented by case studies and group discussions throughout the program.

Prerequisite

Diploma of Technology in Health or Engineering, or university graduation. Prerequisites for certain courses are indicated in the course description for this program. Completion of all Level 1 courses is required before enrolling in Level 2 courses, except where permission is granted by the Associate Dean.

Applicants should be interested in human resources management. Previous business experience is desirable but not mandatory.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource market. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 200 Macroeconomics — Develops an understanding of the organization and operation of the Canadian Economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income employment, inflation, money and banking, international trade, and growth. An appreciation of the relationship between economic theory and economic policy is provided. Prerequisite: ADMN 100 or equivalent.

ADMN 310 Management Science — Emphasizes the use of decision-making models in business. Trains students in the use of quantitative methods in the choice of alternatives in the decision-making process. Prerequisite: OPMT 110, OPMT 130 or equivalent.

ADMN 321 Interpersonal Skills Development — This lab concentrates on the development of skills for personnel problem solving. It emphasizes role-play training with students in advisory capacities, helping management and employees to resolve human resource management problems. Prerequisite: ADMN 222 or equivalent.

ADMN 330 Industrial Relations — A detailed analysis of selected labor/ management problem areas with emphasis on the solution of practical existing problems in industrial relations.

ADMN 340 Personnel Administration — An introduction to the fundamentals of personnel management, including organization of the personnel function, salary administration, fringe benefits, training, management development and performance appraisal, constructive discipline, grievances and morale. Prerequisite: ADMN 222 or equivalent.

ADMN 341 Human Resource Planning and Analysis — An introduction to the skills and concepts associated with employee data collection and analysis for strategic and human resource planning purposes. Employment planning models, job analysis techniques and statistical methods of measurement are addressed.

ADMN 360 Microcomputer Software Systems — Instruction and practice with commercially advanced microcomputer software systems. Topics currently include integrated programs, exposure to the MacIntosh and MS-DOS environments, and databases. Prerequisite: ADMN 190 or equivalent.

ADMN 385 Business Law — A one-term, condensed course which acquaints the business student with a basic knowledge of Canadian Law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

ADMN 410 Management Policy — An analysis of business policy formulation designed to give the student practice, experience and confidence in handling business situations, including those of a complex nature where basic policy decisions are necessary to assist in problem solving. Comprehensive business cases will be selected covering such fields as finance, control, personnel, production, marketing and general management, for study and discussion. The course is designed to acquaint the student with the role of top management and its interrelationships. Prerequisite: All Level 3 courses.

ADMN 430 Collective Bargaining — An introductory analysis of the fundamental issues and facts of labor-management relations. Special emphasis is given to collective agreement content and interpretation, bargaining and basic labor economics. Prerequisite: ADMN 330 or equivalent.

ADMN 440 Personnel Management Systems — Develops competence in several key personnel practitioner areas, including job evaluation techniques, wage and salary administration functions, and performance appraisal techniques. Two hours a week of microcomputer applications laboratory time are included, for preparation of course assignments that use microcomputer application. Prerequisite: ADMN 340 or equivalent.

ADMN 441 Interviewing Skills — A skills development course emphasizing the interpersonal skills necessary for successful selection interviews. Training techniques include role-playing, individual counselling and feedback. Prerequisite: ADMN 321 and 340; or equivalent.

ADMN 442 Training and Development — Develops ability to design and implement a training program with emphasis on practical problems of training in industry. Prerequisite: ADMN 321 and 340; or equivalent.

ADMN 490 Directed Studies — Designed to give students some practical application of concepts learned in major program areas by engaging in problem-solving projects in business or government. Prerequisite: All Level 3 courses, or permission of the Associate Dean.

FMGT 519 Financial Management 1 — Basic accounting procedures; closing the books; adjustments; working papers; merchandise operations; statement and ledger organization; special journals; forms of business organization; accounting principles; introduction to cost accounting; analysis of financial data; working capital, departmental and branch operations; consolidations.

FMGT 619 Financial Management 2 — See FMGT 519. Prerequisite: FMGT 519 or equivalent.

International Trade

To complement Canada's export drive, this option was created to supply industry with the skilled personnel needed to perform technical tasks to research new markets, their regulations and restrictions, and to negotiate improved rates for cost-effective transportation, tariff classification, documentation, banking, collections, etc.

Students of the International Trade option are trained in foreign market research to develop and sustain demand for Canadian products abroad. Studies in Geography of Trading, International Economics, Purchasing and International Law and Finance enable graduates to adapt to rapidly changing conditions in foreign exchange, non-tariff barriers, the use of Free Trade zones, etc. Extensive training in logistics, transportation economics and regulation/deregulation allows graduates to deal effectively with problems arising from alternative routing, freight consolidation and intermodalism.

Job Opportunities

International Trade graduates can immediately contribute to the profitability of the employer while learning about the commodity involved.

Because of the versatility of this technical training, graduates are suited to a variety of positions with trading houses, exporting manufacturers, importers, customs brokers, foreign freight forwarders, etc., leading to highly paid management careers.

Prerequisites

Algebra 11 with C+. This requirement may be waived for mature students on approval by the Associate Dean. If your mathematical skills are in doubt, it is recommended that you take Preparatory Business Math OPMT 099. It is also recommended that potential students acquire basic typing skills due to the extensive use of computer input terminals in the program.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource markets. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 200 Macroeconomics — Develops understanding of the organization and operation of the Canadian Economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income employment, inflation, money and banking international trade, and growth. An appreciation of the relationship between economic theory and economic policy is provided.

ADMN 331 Industrial Relations — An introductory analysis of the fundamental issues and facts of labor-management relations. Special emphasis is given to collective agreement content and interpretation, bargaining and basic labor economics.

ADMN 382 International Law — This course will examine conflicts of law, international sale of goods contracts, international arbitration, etc. Provides the student with an overview of central legal issues which arise from conducting business across national boundaries.

ADMN 385 Business Law — A one-term, condensed course which acquaints the business student with basic knowledge of Canadian law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

ADMN 449 Human Resources Management — An introduction to the fundamentals of personnel management, including organization of the personnel function, salary administration, fringe benefits, training, management development and performance appraisal, constructive discipline, grievances and morale.

BCOM 107 Business Communication for Operations Management — An applied communication course for Operations Management students. It covers the basic writing and oral communication skills necessary in business and industry. Students learn how to write effective letters and memos and how to prepare and make oral presentations. The course also includes a unit on using word processors.

BCOM 207 Business Communication for Operations Management — Gives further instruction and practice in the skills learned in BCOM 107. In this term, the focus is on job application, functional reports, telephone techniques and meetings. Prerequisite: BCOM 107.

COMP 100 Data Processing — Introduction — Training in basic data processing principles to develop recognition of the application of these principles to industry. The principal functions of data processing are illustrated and practised with an H.P. minicomputer operating interactively. Elementary computer programs are written and tested on the computer. Use of flow-charting and elementary data processing systems design will illustrate the achievement of data processing objectives.

FMGT 101 Introduction to Financial Accounting — Includes a survey of the accounting process and a review of basic accounting theory. Preparation and analysis of financial statements and the reporting of financial information to outsiders is covered in depth. Also covered is accounting for assets, liabilities and owner's equity.

FMGT 202 Introduction to Financial Accounting — Covers the preparation and utilization of financial information for internal management purposes. Volume-profit analysis, capital budgeting, depreciation, return on investment, budgeting systems, common dollar accounting and funds flow analysis will also be considered. Prerequisite: FMGT 201.

FMGT 442 Domestic and International Corporate Finance — Familiarizes students with the role finance plays in business and industry. Students will obtain a basic understanding of the interrelationships of finance with the other functional aspects of business. Teaches students common decision-making tools in finance to enable them to react intelligently under varying conditions within a business environment of ever-increasing complexity. Special emphasis will be given to the services provided by financial institutions to firms that take part in international trade.

MKTG 102 Introduction to Marketing — Includes a detailed study of the basic marketing functions, marketing research, product planning, selection of trade channels, merchandising, advertising, sales promotion and salesmanship. Marketing of consumer goods as well as industrial goods will also be covered.

MKTG 103 Sales Skills — Introduction to professional selling. Emphasizes practical problems of locating and qualifying prospects, use of depth approach and improving sales preparation and organization. Examines improving interpersonal communications in non-selling situations.

MKTG 309 Marketing Research 1 — Examines the basic approaches to marketing research. It discusses the techniques and tools of this research and relates these tools to the decision-making process. Emphasis is placed on the use of marketing research in the total marketing decision concept. Special applications of marketing research to simulated real-life situations are examined. Prerequisite: MKTG 101, 201.

MKTG 401 Market Planning — Examines how to develop a formal marketing plan including situation analysis, market and competitive conditions research, objective setting and action scheduling, using computer based management systems.

MKTG 409 Marketing Research 2 — see MKTG 309. Prerequisite: MKTG 309.

OPMT 101 Business Mathematics — Covers the basic mathematics applied to industry and commerce. Topics include basic algebra, break-even analysis, simple and compound interest, annuities; and methods of evaluating investments in business.

OPMT 121 Business Statistics — Covers fundamental statistics used in business and industry. Topics include descriptive statistics, probability theory and major distributions, sampling, estimation, tests of hypotheses, correlation and linear regression.

OPMT 150 Microcomputer Applications — An introduction to the role of personal computers in business. Emphasis is on learning to use a standard integrated software product for word processing, financial modelling (spreadsheet), and file management (data base).

OPMT 241 Systems Analysis and Design — In business, systems analysis and design refers to the process of examining a business situation with the intent of improving it through better procedures and methods. The course includes: problem definition, the project proposal, procedure analysis, forms and reports analysis, interviewing, system design, procedure and writing implementation planning.

OPMT 250 Computer Programming — Applied BASIC — This second level course involves the use of advanced BASIC to solve problems which are related to the Operations Management field. Topics include arithmetical operations, input/output, branching, looping, arrays, random numbers, sorting, strings, subroutines, functions, and files.

OPMT 301 Quantitative Methods/Computer Applications 1 — Following basic training in mathematics of finance and statistics, students are introduced to the solution of more complex business problems by mathematical processes. Forecasting methods are examined with computerized analysis of data. Some aspects of management science that are particularly useful in the transportation business are examined manually and through the computer. These include linear programming, the transportation model, simulation, and waiting line analysis. The major emphasis is on interpretation of results and preparation of management oriented reports.

OPMT 350 Computers and Information Processing — Continuation of OPMT 241. The first half of the course covers the process of building a data base application with a commercial data base manager called R-base 5000. The material focuses on the EXPRESS module of the R-base packages which enables quick development of data base applications. The second half of the course features a major case study that requires students to analyze and design a computer based information system for a small business.

OPMT 401 Quantitative Methods/Computer Applications 2 — A continuation of OPMT 301 with discussions on inventory control methods and network techniques.

OPMT 446 Quality Assurance (International) — The impact of quality assurance on business activity in the international market. Topics include: QA fundamentals; North American, European and Japanese standards for quality programs; international product certification; national level planning for quality control in Pacific Rim countries; ISO standards for quality management systems and their effect on international procurement, co-operation and competition.

TDMT 100 Transportation Methods Introduces students to the various ways of moving commodities, including air, highway, pipeline, rail and water carriers. Economic costs of operation and selection of equipment are also covered.

TDMT 101 Geography of Trading 1 — Transportation is the basis of all economic systems including agricultural production, industrial location, settlement patterns, marketing systems and consumer shopping. This course studies in detail the role of transportation, major trading routes and ports and other factors in the development of resources for the world and Canada. Emphasis is placed on Canada as a major resource producer, particularly in the emerging Pacific Rim.

TDMT 201 Geography of Trading 2 — Designed to give students a basic understanding of world resource industries — agriculture, raw materials, energy sources as well as the flow of commodities, trade routes, trading patterns and the degree of inter-dependence among the nations. As well, the course will cover the characteristic of each mode of transport on the six continents. Prerequisite to International Trading Strategies.

TDMT 202 Transportation Regulations — Familiarizes the student with transportation regulations at federal, provincial, and regional levels. The Acts governing intra and inter-provincial transportation, and regulation of common, contract and private carriers, including their rights and responsibilities, and the deregulated U.S. transportation industry.

TDMT 203 Transportation Economics — Covers a variety of transportation services and cost factors including carrying capacity, load factors, fuel cost, etc., concluding with profit oriented rate making. Costing methods relating to various modes of transportation are discussed considering distance, flow of goods and backhaul.

TDMT 204 Integrated Purchasing — Acquaints the student with purchasing principles and methods using computerized techniques. Methods of buying transportation services are covered. Emphasis is on computer assisted analysis of PARETO's law including vendor evaluation and contracting methods for A, B, C items categories. Course also includes advanced application of the EOQ formulae taking turnover into consideration on three levels; vendor-firm-customer, geographic-freight-consolidation, and cost-saving-results. Elements of material management, customer services, performance standards, computerized measures emphasize goods-in-transit manipulation to avoid stockouts. The basic components of cost trade-offs through special quantitative case studies are also covered.

TDMT 305 International Trade — To develop an understanding of international logistics, this course deals with the eco-

nomie and trading characteristics of nations as they relate to the Canadian economy. An overview of comparative advantage and disadvantage introduces the student to the protectionism and intricacies of international trading. INCO terms and pricing, floating and pegged exchange rates will be discussed together with the movement of international inventories. The course also covers information on counter trade. Prerequisite to Import/Export. Prerequisite: TDMT 201.

TDMT 306 Transportation Marketing — The student learns to relate the services of a transportation company to client requirements. The increasing impact of intermodalism is examined while the student develops the ability to analyse the competitive position of his carrier (employer), to assure effective participation in the market.

TDMT 307 Traffic Management — Acquaints the student with the broad responsibilities of a traffic manager in an industry requiring transportation services. Includes negotiating with common carriers, criteria for carrier selection, rate negotiations, routing, consolidation, documentation, handling claims, tracing, expediting and carrier performance analysis for future carrier selection.

TDMT 309 Marine Shipping and Insurance — This course is designed to familiarize the student with the basics of the principles and problems of ships, navigation and cargo, trends in shipping, containerization/unitization and the port as a sea transport interface. Marine Insurance will deal with the types of policies, the fundamentals of coverage, the analysis of the policy and claim handling.

TDMT 409 Exporting/Importing — Practical application of previously learned theories acquaints students with the terminology and interpretation of the Customs Act, customs tariff, excise tax, and Antidumping Act. Gives the student thorough understanding of fair market value, dumping, countervailing duty, the GATT, tariffs and the increasing use of non-tariff barriers including present new devices. Documentation for importing and exporting, entries, drawbacks, refunds, appeals and classification is covered.

TDMT 410 Logistics — An overview of the total distribution concept. Adding to previously learned information the course examines distribution facility location analysis, information systems, control systems and distribution economics and profitability. With heavy emphasis on customer services and profitability, the course prepares the student to conduct a transportation audit, customer service audit and a complete distribution audit.

TDMT 411 Industry Project — The course is an opportunity to apply the knowledge from the program to a specific industry project at the client's place of business.

Operations Management

We offer our students a stimulating, practical 2-year program which combines engineering and business. Our graduates possess the sought after skills that help industry become more productive.

During your time with us, you will be taking courses in industrial engineering, human dynamics, materials management and computer systems. This program stresses productivity improvement so that, upon graduation, you will be prepared to solve business problems and become a valued member of the management team.

Operations Management program graduates are excellent candidates to pursue professional membership in:

- The Institute of Industrial Engineers,
- The American Production and Inventory Control Society,
- International Material Management Society,
- Data Processing Management Association,
- Project Management Institute

Job Opportunities

Graduates have found career opportunities in a variety of industries including manufacturing, service, distribution and government. They may work in a variety of dynamic, highly paid management positions such as: production scheduler, inventory manager, industrial engineer, systems analyst, production supervisor, data processing manager, management engineer, programmer analyst, inventory planner, quality control inspector, buyer, materials manager, purchaser, work study analyst, project planner, warehouse supervisor, terminal manager

Students applying for admission to Operations Management program should ask themselves the following questions:

- Do I want to be a manager?
- Do I enjoy a challenge?
- Do I like working with people?
- Do I want to work with computers?
- Do I welcome the opportunity to improve performance by changing present systems?
- Do I want to develop systematic problem-solving ability?

If the answer is yes — then apply to the Operations Management Technology program and start charting your future.

Prerequisites

Algebra 11 with C+ (Physics II is desirable). This requirement may be waived for mature students on approval by the Associate Dean. If your mathematical skills are in doubt, it is recommended that you take Preparatory Business Math OPMT 099. It is also recommended that potential students acquire basic typing skills due to the extensive use of computer input terminals in the program.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource markets. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 200 Macroeconomics — Develops understanding of the organization and operation of the Canadian Economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income employment, inflation, money and banking international trade, and growth. An appreciation of the relationship between economic theory and economic policy is provided.

ADMN 221 Human Resource Management — Studies human behavior and attitudes in an organizational setting; the organization's effect on the person's perceptions, feelings and actions; and the person's effect on the organization, particularly how behavior affects the achievement of the organization's purposes. Concepts of leadership, communications, power, authority, change and conflict will be examined.

ADMN 330 Industrial Relations — A detailed analysis of selected labor/management problem areas with emphasis on the solution of practical problems in industrial relations.

ADMN 343 Human Resource Management — An introduction to the fundamentals of personnel management, including human resource planning; recruiting and selection techniques; job analysis, descriptions and evaluation; compensation administration; performance appraisal systems; training; employee safety and health. Includes a review of current employment legislation.

BCOM 107 Business Communication for Operations Management — An applied communication course for Operations Management students. It covers the basic writing and oral communication skills necessary in business and industry. Students learn how to write effective letters and memos and how to prepare and make oral presentations. The course also includes a unit on using word processors.

BCOM 207 Business Communication for Operations Management — Gives further instruction and practice in the skills learned in BCOM 107. In this term, the focus is on job application, functional reports, telephone techniques and meetings. Prerequisite: BCOM 107.

CDCM 323 CAD for Operations Management — Rudiments of computer aided drafting. Machine log-on procedures. Simple 2-D drawings, orthographic projection, dimensioning and annotations.

CHSC 122 Engineering Concepts — Examines comparative properties of all classes of engineering materials including metals, alloys, polymers, concrete, wood and ceramics. Common causes of failure in service including fatigue, weathering, embrittlement and corrosion.

COMP 100 Data Processing Introduction — Training in basic data processing principles to develop recognition of the application of these principles to industry. The principal functions of data processing are illustrated and practised with an H.P. minicomputer operating interactively. Elementary computer programs are written and tested on the computer. Use of flow-charting and elementary data processing systems design will illustrate the achievement of data processing objectives.

FMGT 101 Introduction to Financial Accounting — Includes a survey of the accounting process and a review of basic accounting theory. Preparation and analysis of financial statements and the reporting of financial information to outsiders is covered in depth. Also covered is accounting for assets, liabilities and owner's equity.

FMGT 202 Introduction to Financial Accounting — Covers the preparation and utilization of financial information for internal management purposes. Volume-profit analysis, capital budgeting, depreciation, return on investment, budgeting systems, common dollar accounting and funds flow analysis will also be considered. Prerequisite: FMGT 101.

FMGT 306 Cost Accounting Operations Management — Concentrates specifically on cost accounting for operations management. Topics will include basic cost concepts, systems of cost accumulation, accounting for manufacturing overhead, standard cost systems and the analysis of cost variances. Variable costing is also dealt with. Prerequisite: FMGT 101 or 202.

MECH 102 Drafting — Introduces students to engineering drawings as a method of communication. Students will learn how to read various types of blueprints and how to communicate using drawings. Emphasis is on visualization, dimensioning and freehand sketching.

MECH 207 Engineering Concepts — Through lectures and laboratory investigations, the course covers the basics of manufacturing processes such as welding, brazing, soldering; metal removal on lathes, milling and grinding machines; computer numerical controlled machine tools.

OPMT 100 Applied Mathematics 1 — Covers basic mathematics applied to industry and commerce. Topics include basic algebra, trigonometry, break-even analysis, simple and compound interest, annuities and methods of evaluating alternatives in industrial investments.

OPMT 120 Applied Mathematics 2 — Covers fundamental statistics used in business and industry. Topics include descriptive statistics, probability theory and major distributions, sampling, confidence intervals, tests of hypotheses, applications to quality control, correlation and linear regression.

OPMT 140 Introduction to Operations Management — Provides an introduction to the role of business in the British Columbia economy. It considers the management of business and emphasizes the types of careers available to Operations Management graduates in B.C. business.

OPMT 150 Microcomputer Applications — An introduction to the role of personal computers in business. Emphasis is on learning to use a standard integrated software product for word processing, financial modelling (spreadsheet), and file management (data base).

OPMT 156 Supervision — Introduces the student to skills required to survive the initial period of promotion to a first line supervisory position. Topics include role of the supervisor, functions of management, authority relationships, design and implementation of "on the job training" programs, how to lead, delegate, discipline and evaluate, as well as dealing with day to day operations including grievances.

OPMT 157 Marketing Research — Designed to give the student a basic appreciation of marketing functions and the role of market research in an organization.

OPMT 160 Method Study 1 — This introductory course in industrial engineering presents a six step systematic approach to methods improvement. The student will learn specific industrial engineering techniques.

OPMT 240 Industrial Engineering — Builds on OPMT 160 to provide the student with a comprehensive knowledge of industrial engineering techniques to solve problems in an industrial setting. Topics include applied method study, feasibility studies, systematic layout planning and computerized layout planning.

OPMT 244 Performance Measurement — Designed to provide the student with an appreciation of work measurement in an industrial setting. Topics include performance rating, time study and predetermined motion time systems such as M.T.M. 2, M.O.S.T. and computerized M.O.S.T.

OPMT 245 Quality Assurance (Manufacturing) — Modern concepts of quality management for the manufacturing industries. Topics include inspection, quality control and quality assurance; organization; quality system functions and documentation requirements; technical, economic and legal aspects of quality assurance management; supplier quality assurance; product reliability; Canadian national standards for quality programs.

OPMT 250 Computer Programming Applied BASIC — This second level course involves the use of advanced BASIC to solve problems related to the Operations Management field. Topics include arithmetical operations, input/output, branching, looping, arrays, random numbers, sorting, strings, subroutines, functions, and files.

OPMT 251 Systems Analysis and Design — In business, systems analysis and design refers to the process of examining a business situation with the intent of improving it through better procedures and methods. The course includes: the system cycle, fact finding, documentation of systems, feasibility studies, forms and report analysis, procedure writing, computer input/output, auxiliary storage devices and file and data base development.

OPMT 300 Quantitative Methods 1 — Applications of mathematical and computer modelling to decision-making in business and industry. Topics include model building, break-even analysis, decision theory, decision support systems, linear programming, queuing theory, simulation models, demand analysis, forecasting methods and computer applications.

OPMT 340 Applied Industrial Engineering 1 — Enables the student to understand the role of manufacturing automation in the productivity improvement process including CAM and robots. The concepts of flexible manufacturing systems, group

technology and computer integrated manufacturing are explored.

OPMT 348 Production and Inventory Management 1 — The emphasis of this course and the continuing course (OPMT 448) is on practical material which can be used with little modification in production or operating environments. The course presents much of the material contained in two of the five exams leading to the professional certification of CPIM (Certificate in Production and Inventory Management). The two exams are Inventory Management and Master Planning. Project planning and scheduling is also covered.

OPMT 351 Microcomputer Data Base Processing — Continuation of OPMT 251. This course covers the process of building data bases and data base applications with a commercial data base manager called R-base 5000. Much of the course is generic in nature and many of the techniques, functions and procedures are applicable to other related data base software packages for microcomputers.

OPMT 400 Quantitative Methods 2 — A continuation of OPMT 300. Prerequisite: OPMT 300.

OPMT 440 Applied Industrial Engineering 2 — Presentation to the board. Specific oral presentation design and delivery. This course is intended as practice for fourth term projects. Mini projects: In preparation for fourth term projects, students are required to negotiate a management level project of their own choosing within BCIT. Students are required to develop working terms of reference with BCIT staff and faculty and complete the project consistent with the terms of reference.

OPMT 441 Safety — Introduction to industrial health and safety. Introduction to safety and accident prevention, accident report writing, safety in the workplace.

OPMT 442 Materials Handling and Transportation — Introduction to materials handling. Basic uses and applications of conveyors, trucks and cranes.

OPMT 448 Production and Inventory Management 2 — A continuation of OPMT 348. This course presents much of the material contained in the three exams — material requirements planning, capacity requirements planning and production activity control, which lead to the professional designation CPIM (Certificate in Production and Inventory Management).

OPMT 449 Industrial Engineering Concepts — BCIT's Operations Management technology requires that each of its second year students successfully conducts and completes a problem-solving study in an organization external to BCIT. Students must select and define, in conjunction with staff advisors and management contacts, a management problem to be solved. Within the bounds of management/student drafted and agreed-to terms of reference, students must demonstrate their ability to apply learned skills to successfully conclude a practical problem-solving laboratory. At the end of the study period, students are required to supply management and BCIT staff with a formal technical report containing firm recommendations, and an oral presentation outlining the study finding and recommendations.

OPMT 450 Computer and Information Processing 2 — Continuance of OPMT 351. This course features a major case study that requires students to analyze and design a computer based information system for a small business. It has been designed to supplement and integrate educational material covered in five prerequisite courses (Introduction to Data Processing, Introduction to Microcomputers, Applied BASIC, Systems Analysis and Microcomputer Data Base Processing). Topics include: auxiliary storage devices, hardware and software selection, operating systems, the request for proposal process, and selection of software package.

OPMT 499 Business Evaluation Systems — Presents a compilation of statistical, marketing production and financial factors that can be used to evaluate a firm's operation and expansion activities.

PHYS 117 Basic Science for Operations Management — A survey course which covers physics topics as they relate to the operations management technology. A brief chemistry component facilitates the study of handling and storage of hazardous materials. Emphasis is on how the basic laws of physical science affect and limit activities in the technology.

PHYS 217 Basic Science for Operations Management — see PHYS 117.

Transportation/ Distribution

In today's changing world, managers must be flexible and well equipped with the skills necessary to appreciate and understand rapidly developing technologies. The Transportation and Distribution Program emphasizes systematic analysis for cost reduction and control within an organization while increasing customer service and strengthening market position through a more effective distribution system.

Transportation and Distribution students study both the "buying" (distribution and management) of a service for the movement of goods and people, and the "selling" or supplying of transportation facilities for the movement of goods within Canada, or to and from Canada.

Job Opportunities

Transportation and Distribution graduates become involved with the buying and selling of transportation services and can choose from a variety of dynamic, highly paid management careers in marine shipping, airlines, railroads, trading, customs brokering, freight forwarding, poolcar operating, manufacturing, etc.

Prerequisites

Algebra 11 with C+. This requirement may be waived for mature students on approval by the Associate Dean. If your mathematical skills are in doubt, it is recommended that you take Preparatory Business Math OPMT 099. It is also recommended that potential students acquire basic typing skills due to the extensive use of computer input terminals in the program.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource markets. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 200 Macroeconomics — Develops understanding of the organization and operation of the Canadian Economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income employment, inflation, money and banking international trade, and growth. An appreciation of the relationship between economic theory and economic policy is provided.

ADMN 331 Industrial Relations — An introductory analysis of the fundamental issues and facts of labor-management relations. Special emphasis is given to collective agreement content and interpretation, bargaining and basic labor economics.

ADMN 382 International Law — This course will examine conflicts of law, international sale of goods contracts, international arbitration, etc. Provides the student with an overview of central legal issues which arise from conducting business across national boundaries.

ADMN 385 Business Law — A one-term, condensed course which acquaints the business student with basic knowledge of Canadian law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

ADMN 449 Human Resources Management — An introduction to the fundamentals of personnel management, including organization of the personnel function, salary administration, fringe benefits, training, management development and performance appraisal, constructive discipline, grievances and morale.

BCOM 107 Business Communication for Operations Management — An applied communication course for Operations Management students. It covers the basic writing and oral communication skills necessary in business and industry. Students learn how to write effective letters and memos and how to prepare and make oral presentations. The course also includes a unit on using word processors.

BCOM 207 Business Communication for Operations Management — Gives further instruction and practice in the skills learned in BCOM 107. In this term, the focus is on job application, functional reports, telephone techniques and meetings. Prerequisite: BCOM 107.

COMP 100 Data Processing — Introduction — Training in basic data processing principles to develop recognition of the application of these principles to industry. The principal functions of data processing are illustrated and practised with an H.P. minicomputer operating interactively. Elementary computer programs are written and tested on the computer. Use of flow-charting and elementary data processing systems design will illustrate the achievement of data processing objectives.

FMGT 101 Introduction to Financial Accounting — Includes a survey of the accounting process and a review of basic accounting theory. Preparation and analysis of financial statements and the reporting of financial information to outsiders is covered in depth. Also covered is accounting for assets, liabilities and owner's equity.

FMGT 202 Introduction to Financial Accounting — Covers the preparation and utilization of financial information for internal management purposes. Volume-profit analysis, capital budgeting, depreciation, return on investment, budgeting systems, common dollar accounting and funds flow analysis will also be considered. Prerequisite: FMGT 201.

FMGT 442 Domestic and International Corporate Finance — Familiarizes students with the role finance plays in business and industry. Students will obtain a basic understanding of the interrelationships of finance with the other functional aspects of business. Teaches students common decision-making tools in finance to enable them to react intelligently under varying conditions within a business environment of ever-increasing complexity. Special emphasis will be given to the services provided by financial institutions to firms that take part in international trade.

MKTG 102 Introduction to Marketing — Includes a detailed study of the basic marketing functions, marketing research, product planning, selection of trade channels, merchandising, advertising, sales promotion and salesmanship. Marketing of consumer goods as well as industrial goods will also be covered.

MKTG 103 Sales Skills — Introduction to professional selling. Emphasizes practical problems of locating and qualifying prospects, use of depth approach and improving sales preparation and organization. Examines improving interpersonal communications in non-selling situations.

OPMT 101 Business Mathematics — Covers the basic mathematics applied to industry and commerce. Topics include basic algebra, break-even analysis, simple and compound interest, annuities, and methods of evaluating investments in business.

OPMT 121 Business Statistics — Covers fundamental statistics used in business and industry. Topics include descriptive statistics, probability theory and major distributions, sampling, estimation, tests of hypotheses, correlation and linear regression.

OPMT 143 Management Engineering — A basic productivity engineering course for transportation and distribution students. Course covers the basic industrial engineering approach to productivity improvement including work measurement and facility layout. Examples and projects are oriented to the TND side of the economy.

OPMT 150 Microcomputer Applications — An introduction to the role of personal computers in business. Emphasis is on learning to use a standard integrated software product for word processing, financial modelling (spreadsheet), and file management (data base).

OPMT 156 Supervision — Introduces the student to some of the skills required to survive the initial period of promotion to a first line supervisory position. Topics include role of the supervisor, functions of management, authority relationships, design and implementation of "on the job training" programs, how to lead, delegate, discipline and evaluate, as well as dealing with day to day operations including grievances.

OPMT 241 Systems Analysis and Design — In business, systems analysis and design refers to the process of examining a business situation with the intent of improving it through better procedures and methods. The course includes: problem definition, the project proposal, procedure analysis, forms and reports analysis, interviewing, system design, procedure and writing implementation planning.

OPMT 250 Computer Programming — Applied BASIC —

This second level course involves the use of advanced BASIC to solve problems which are related to the Operations Management field. Topics include arithmetical operations, input/output, branching, looping, arrays, random numbers, sorting, strings, subroutines, functions, and files.

OPMT 301 Quantitative Methods/Computer Applications 1

— Following basic training in mathematics of finance and statistics, students are introduced to the solution of more complex business problems by mathematical processes. Forecasting methods are examined with computerized analysis of data. Some aspects of management science that are particularly useful in the transportation business are examined manually and through the computer. These include linear programming, the transportation model, simulation, and waiting line analysis. The major emphasis is in interpretation of results and preparation of management oriented reports.

OPMT 350 Computers and Information Processing —

Continuance of OPMT 241. The first half of the course covers the process of building a data base application with a commercial data base manager called R-base 5000. The material focuses on the EXPRESS module of the R-base packages which enables quick development of data base applications. The second half of the course features a major case study that requires students to analyze and design a computer based information system for a small business.

OPMT 401 Quantitative Methods/Computer Applications 2

— A continuation of OPMT 301 with discussions on inventory control methods and network techniques.

OPMT 445 Quality Assurance (Services) —

Quality Assurance related to transportation and distribution services. Topics include: QA fundamentals for service industries; quality control planning for operating equipment and goods in transit; measurement of service quality; QA support for procurement and the evaluation of suppliers; quality management programs and their effect on business performance and trading opportunities.

OPMT 498 Business Evaluation Systems —

Presents a compilation of statistical, marketing production and financial factors that can be used to evaluate a firm's operation and expansion activities.

TDMT 100 Transportation Methods —

Introduces students to the various ways of moving commodities, including air, highway, pipeline, rail and water carriers. Economic costs of operation and selection of equipment are also covered.

TDMT 101 Geography of Trading 1 —

Transportation is the basis of all economic systems including agricultural production, industrial location, settlement patterns, marketing systems and consumer shopping. This course studies in detail the role of transportation, major trading routes and ports and other factors in the development of resources for the world and Canada. Emphasis is placed on Canada as a major resource producer, particularly in the emerging Pacific Rim.

TDMT 201 Geography of Trading 2 —

Designed to give students a basic understanding of world resource industries — agriculture, raw materials, energy sources as well as the flow of commodities, trade routes, trading patterns and the degree of inter-dependence among the nations. As well, the course will cover the characteristic of each mode of transport on the six continents. Prerequisite to International Trading Strategies.

TDMT 202 Transportation Regulations — Familiarizes the student with transportation regulations at federal, provincial, and regional levels. The Acts governing intra and inter-provincial transportation, and regulation of common, contract and private carriers, including their rights and responsibilities, and the deregulated U.S. transportation industry.

TDMT 203 Transportation Economics —

Covers a variety of transportation services and their cost factors including carrying capacity, load factors, fuel cost, etc., concluding with profit oriented rate making. Costing methods relating to various modes of transportation are discussed considering distance, flow of goods and backhaul.

TDMT 204 Integrated Purchasing —

Acquaints the student with purchasing principles and methods using computerized techniques. Methods of buying transportation services are covered. Emphasis is on computer assisted analysis of PARETO's law including vendor evaluation and contracting methods for A, B, C items categories. Course also includes advanced application of the EOQ formulae taking turnover into consideration on three levels; vendor-firm-customer, geographic-freight-consolidation, and cost-saving-results. Elements of material management, customer services, performance standards, computerized measures emphasize goods-in-transit manipulation to avoid stockouts. The basic components of cost trade-offs through special quantitative case studies are also covered.

TDMT 305 International Trade —

To develop an understanding of international logistics, this course deals with the economic and trading characteristics of nations as they relate to the Canadian economy. An overview of comparative advantage and disadvantage introduces the student to the protectionism and intricacies of international trading. INCO terms and pricing, floating and pegged exchange rates will be discussed together with the movement of international inventories. The course also covers information on counter trade. Prerequisite to Import/Export. Prerequisite: TDMT 201.

TDMT 306 Transportation Marketing —

The student learns to relate the services of a transportation company to client requirements. The increasing impact of intermodalism is examined while the student develops the ability to analyse the competitive position of his carrier (employer), to assure effective participation in the market.

TDMT 307 Traffic Management —

Acquaints the student with the broad responsibilities of a traffic manager in an industry requiring transportation services. Includes negotiating with common carriers, criteria for carrier selection, rate negotiations, routing, consolidation, documentation, handling claims, tracing, expediting and carrier performance analysis for future carrier selection.

TDMT 308 Transportation Management —

The operation departments of a transportation company are described in detail. Freight tariffs as applicable to commodity, special and ancillary services, routing, misrouting, claim prevention, and the organization and control of the company are examined.

TDMT 309 Marine Shipping and Insurance —

This course is designed to familiarize the student with the basics of the principles and problems of ships, navigation and cargo, trends in shipping, containerization/unitization and the port as a sea transport interface. Marine Insurance will deal with the types of policies, the fundamentals of coverage, the analysis of the policy and claim handling.

TDMT 409 Exporting/Importing — Practical application of previously learned theories acquaints students with the terminology and interpretation of the Customs Act, customs tariff, excise tax, and Antidumping Act. Gives the student thorough understanding of fair market value, dumping, countervailing duty, the GATT, tariffs and the increasing use of non-tariff barriers including present new devices. Documentation for importing and exporting, entries, drawbacks, refunds, appeals and classification is covered.

TDMT 410 Logistics — An overview of the total distribution concept. Adding to previously learned information the course examines distribution facility location analysis, information systems, control systems and distribution economics and profitability. With heavy emphasis on customer services and profitability, the course prepares the student to conduct a transportation audit, customer service audit and a complete distribution audit.

TDMT 411 Industry Project — The course is an opportunity to apply the knowledge from the program to a specific industry project at the client's place of business.

TDMT 414 Manufacturing Methods — A study of the processes involved in the making of consumables. Physical, chemical and electrical principles are reviewed with special emphasis on the handling, care and disposal of hazardous products.

BROADCAST COMMUNICATIONS

Radio Television Broadcast Journalism

The Broadcast Communications programs were initiated through the combined efforts of the private sector of the industry and the Canadian Broadcasting Corporation in this province. The need for trained personnel continues to grow in radio and television operations, broadcast journalism, and related areas. Those interested in entering fields other than mass communications through broadcasting, (audio and video production, public relations, cablecasting, etc.), will find much of the basic technical background included in these programs.

The educational emphasis is upon **versatility** so that a graduate may find employment in a variety of occupations within broadcasting and associated industries. Students will enrol in **one of three** programs: **Radio**, **Television**, or **Broadcast Journalism**.

Employment Opportunities

Graduates are employed throughout British Columbia and in all parts of the world, wherever radio, television, cable facilities, audio and video production operations exist.

The Programs

Radio

This program provides detailed training in AM and FM radio operations. Extensive instruction is given in announcing on-air operations, interviewing, commercial copywriting and production, feature and program production, as well as other operational areas including sales and management. Students also receive a great deal of **practical** experience via structured simulations in first year and operation of the campus radio station **CFML 104.5FM** in second year.

Television

This program concentrates on the production tools and operational methods of a modern television broadcast station, cable facility or video production house. Full use of color and experience in producing all types of modern television and video productions is provided, so that students may work their way through a variety of positions in television and video operations.

Broadcast Journalism

This program prepares students for careers as news reporters, newscasters and editors in radio and television. Training includes basic news broadcasting skills and academic courses. News writing, audio and video editing, research, reporting and announcing are combined with a substantial background in politics, economics and other necessary topics. Regular newsroom and field reporting operations develop the students' experience in news judgement, reporting and presentation.

General Information

Applicants must pass appropriate audition and aptitude tests, and must be able to type 25 correct words per minute to qualify for entrance into Broadcast Communications Programs. Normally, only qualified applicants will be interviewed.

In each of the programs, students are graded against industry and professional standards and must achieve such standards within their period of study in order to graduate.

Prerequisites

Graduation from senior secondary school is a general prerequisite. Broadcast Communications programs are in high demand and only a limited number of students can be accepted each year. Applicants should apply early and ensure that their application file is complete in order to have it processed.

All applicants must include in their applications a short essay (approximately 500 words) detailing their reasons for choosing broadcasting as a career and their career goals and aspirations. This essay must accompany the application, together with all pertinent documents, letters of reference, recommendations, school and university/college transcripts, etc. Include details on related experience.

Information meetings are held on the last Monday of August and the first Monday of each month during the school year (September to June) at 1730 in Room 129, just off the north foyer in Building 1A. (Where the first Monday of a month is a holiday, the meeting is held on the second Monday.)

Normally, all **qualified** applicants will be interviewed. If on-campus interviews are not possible, please write to the Department Head and an interview in the field may be arranged.

All applications may be enhanced by enrolling in night school courses, volunteering at cable operations, university and community radio stations, etc. However, all Broadcast Communications programs are oversubscribed and while these actions may enhance an applicant's chances of acceptance, no guarantees are made or implied. No waiting list is established.

The prospective applicant is expected to have a thorough knowledge of English. Previous studies in the areas of political science, history, psychology, business, law, computer science, and other humanities, as well as an up-to-date awareness of current events will prove valuable.

Course Descriptions

ADMN 101 Economic Issues — Exposes students to the application of various economic principles to the study of particular problems. Broadcast Communications students receive customized course material designed to make them aware of a variety of economic issues that relate to broadcasting operations and practices.

ADMN 320 Interpersonal Relationships — Broadcasting involves unusually close interaction among its participants who work together to provide information, entertainment and station revenues. The course explores the importance of harmonious relationships and methods for achieving them.

ADMN 381 Broadcast Law — This introduction to the Canadian legal system emphasizes contracts, torts (including defamation and privacy), criminal law, court procedure and contempt, secured transactions, government agencies, employment law, forms of doing business, negotiable instruments, and other topics applicable to broadcast business.

BCOM 101 Communication for Broadcasters — Through lectures, labs and industry examples, this course examines some of the basic differences between writing for print and writing for the ear. Students completing this course should be able to apply some of these principles to a variety of standard broadcast features such as reviews, profiles, etc., written in clear, concise and correct language.

BCOM 201 Communication for Broadcasters — A continuation of BCOM 101, this segment of the course will apply the principles of television writing. Students will work individually and in groups to produce a number of presentations and scripts including a documentary feature. Prerequisite: BCOM 101.

BCOM 301 Advanced Communication for Broadcasters — Emphasis is on the writing and research skills needed by professionals in broadcasting. Writing skills will be developed through writing scripts for reviews and critiques, writing powerful business letters and memos and developing effective program and story ideas. Research skills will be developed through units on speed reading, time management and advanced research techniques.

BCOM 401 Business Communication for Broadcasters — Emphasis is on skills needed to sell writing to broadcasters and to sell students' abilities and training to employers. Skills will be developed through units on covering letters, resumes and job interview techniques; copyright law; writing effective proposals, queries and sales presentations, and translating students' work into several media. Students will be required to produce broadcast material written to professional industry standards.

BCST 100 Industry Organization — This introduction to the organization and management of the Canadian broadcasting system incorporates a series of guest lecturers from a variety of specialized areas in the industry. Topics include broadcast history, regulatory agencies, industry structure, associations, audience measurement, AM/FM/TV/Cable regulations, music licensing, social issues, broadcast legal issues, etc. The aim is to achieve a better understanding of the broadcast industry from a regional, national and international perspective.

BCST 101 Technical Introduction — Students are introduced to the fundamentals of electricity, magnetism, light and sound. These principles are then used to explain the technical operation of equipment used in the broadcasting industry.

BCST 103 Copywriting — Familiarizes students with advertising techniques, particularly in the broadcast media. Lectures and workshop sessions relate to the writing and evaluation of radio and television commercials. Basic marketing concepts, the function of advertising in society and the economics of broadcast are related. Commercials are studied in detail. Special emphasis is placed on developing the student's ability to work in groups. While students may not become writers, the course could lead to a position in copywriting, broadcast sales or promotion.

BCST 110 Radio Operations — An introduction to the equipment and techniques used in radio broadcasting. Starting with station organization, the student continues with a study of microphones, radio control boards, tape machines and broadcast accessories, and develops the manual dexterity needed to operate this equipment.

BCST 111 Radio Announcing — An introduction to effective oral communication for radio using lectures, exercises and practical application of the techniques of various specialized forms. Individual and classroom critiques are employed; auditions and assignments measure progress. Broadcast regulations and program scheduling are also included in the announcer-related areas of practical responsibilities.

BCST 112 Contemporary Issues — It is essential that a broadcaster be credible to the listener by exhibiting concerns and interests close to the individual and the community. As broad a base of external knowledge as possible must be acquired reflecting the local, regional, national and international scene. Lectures and practical exercises assist in acquiring and building the knowledge base and using it effectively.

BCST 113 Introduction to Broadcast Journalism — Introduces the radio student to the basic fundamentals and principles of news broadcasting. The course will instruct students in the gathering, handling, and dissemination of news and sports information and will make them more aware of the importance of information programming in the broadcast industry.

BCST 120 Television Introduction — Understand the basic components of a television production and how each interrelates with the other. Equipment explanations include cameras, switchers, audio equipment, video tape recording, and EFP/ENG usage. Manual dexterity is developed in the operation of studio and control room production equipment. The course is divided into approximately 8 hours lab (orientation/practical) and 3 hours lecture. This may fluctuate from time-to-time.

BCST 121 Visual Fundamentals for Television — Covers the fundamentals of picture taking, including the practical aspects of focus, lighting, etc., and creative aspects — how to tell stories with pictures. The course provides the conceptual base for later work in electronic news gathering (ENG) techniques.

BCST 130 Introduction to News Reporting — Introduces the student to the basic principles of radio and television news gathering and dissemination. The course will give students a grounding in the systems, issues, and policies of the broadcast news industry and will prepare them for the more detailed and involved aspects of the succeeding news course.

BCST 131 Introduction to Announcing — The student is introduced to basic concepts of voice use, announcing techniques and news reading skills. Stress is placed on daily practice and students receive both individual and group coaching.

BCST 132 Introduction to Radio — Broadcast Journalism students are introduced to radio broadcasting equipment and production techniques. The course is designed to give the student a basic understanding of the operational side of radio broadcasting. Practical work complements classroom instruction.

BCST 133 Introduction to Television — Introduces broadcast journalism students to television educational techniques, preparing for future work in this industry by providing an understanding of television operations that occur while they are "on camera".

BCST 134 News Writing — Trains and prepares students to write radio and television news copy. Two hours per week are devoted to lecture and basic writing theory. Two hours are directed at "in-class" writing and re-writing practice for both media. The course relies heavily on "in-class" practice and critique. Occasionally, students will critique their own work, and that of others. Guest lecturers from the broadcast industry are utilized from time-to-time.

BCST 135 Municipal Government — This course follows a lecture format, with practical assignments, and covers the fundamental operations, structures and problems of local government in B.C. The focus is related directly to news reporting.

BCST 137 Visual Fundamentals for Journalism — Students examine the language of pictures and their use to convey information. Topics include the history of pictorial communications, social context, the relationship between picture making technologies, picture communications and picture use in television news. The course objective is conceptual stimulation rather than "button pushing". While some familiarity with 35mm photography is assumed, there are ample opportunities to learn "the basics".

BCST 200 Industry Organization — See BCST 100. Prerequisite: BCST 100.

BCST 203 Copywriting — see BCST 103. Prerequisite: BCST 103.

BCST 209 Practicum — This is a four week practical exercise to complete first year. Radio students operate campus radio station CFML, twenty-four hours per day, during this period. Television students produce a series of program segments, most involving Electronic News Gathering techniques. Broadcast Journalism students work both with Radio students in providing news coverage on CFML and with Television students in covering television news stories.

BCST 210 Radio Operations — A continuation of BCST 110, the major emphasis is on honing the technical operations skills learned in term one. Commercial production, radio station operations, audition tapes, and the use of lightweight, portable equipment are topics for instruction in this term. Emphasis is placed on practical applications of theory. Prerequisite: BCST 100.

BCST 211 Radio Announcing — Effective oral communication of ad-lib and written material is strengthened, along with timing, up-grading to acceptable on-air standard, and continued classroom drills, exercises and practice. Basis for correct foreign language pronunciation is provided. Operations in conjunction with radio operations labs serve to bring reality to course objectives. Prerequisite: BCST 111.

BCST 212 Contemporary Issues — Building on the knowledge base attained in term one seminars, lectures and oral communication exercises further develop even broader areas of specific listener-oriented subjects and concerns, and the application in various broadcast forms. Organization of facts and concise communication delivery is stressed. Prerequisite: BCST 112.

BCST 220 Television Introduction — See BCST 120. Prerequisite: BCST 120.

BCST 221 Visual Fundamentals for Television — Designed for TV students, the course concentrates on 35 mm photography in TV stations where the production of slides for news and commercial use is often extensive. Students learn how to take good pictures and to develop and print them.

BCST 222 Theory of Color Television Systems — Begins with the psychophysics of human vision and explains how the eye perceives and adapts to color. This theory is applied to the NTSC system. The color TV signal path, from the camera through production and measuring equipment to final display, is explained. Prerequisite: BCST 101.

BCST 223 Television Production Planning — Upon successful completion of this course, the student will be able to plan all the elements necessary to guarantee a production which meets the professional standards of the television production industry, and organize and conduct pre and post production meetings as the producer/director of a proposed series pilot. Prerequisite: BCST 220.

BCST 230 News Reporting — This course gets the student involved in the identification, researching and gathering of news material in an organized manner. The student is introduced to beat and filing systems, the courts, the police, organized labor, business, and politics. Prerequisite: BCST 130.

BCST 231 Announcing for Journalists — After initial voice training in term one, the student is now ready for advanced radio and TV news reading. Through additional training and coaching, the student is expected to polish voice skills and become proficient in ad-lib techniques and interviewing. The student must develop proficiency in news presentation for both radio and TV. Prerequisite: BCST 131.

BCST 232 Radio News — This is the first opportunity for students to work in a newsroom environment. The class is divided into small groups for personal instruction on operating newsroom equipment. This is followed by several weeks of practice where students write, compile and read newscasts as well as honing their ability to use newsroom equipment. Prerequisite: BCST 134.

BCST 233 Television News — Students learn the process by which a story idea is transformed into a television news story, how to gather visual materials that tell their story, to write a script that works with their visuals, and to edit visuals together with script to create a comprehensible television news story. Some attention is given to newscast make-up and presentation. Prerequisite: BCST 133.

BCST 235 Government and Politics — Since a broadcast journalist frequently deals with political issues, this course acquaints the student with the structure of the Canadian Federal and Provincial governments. It also provides an opportunity to research political issues and interact with other students on current issues.

BCST 310 Radio Operations — Having gained basic competence in radio broadcasting techniques, students now apply their knowledge to regular practical work through daily operation of the campus radio station CFML, available on cable FM throughout the lower mainland. All work must be done to industry standards and individual and group performance is evaluated and critiqued. In lectures, students receive training in station systems and operations. In practice, students perform all the roles normally found in industry. The course is

demanding and stimulating. Prerequisite: BCST 110, 210, 111 and 211.

BCST 312 Radio Sales and Management — Detailed studies cover a number of topics that develop student broadcasters' attitudes toward the industry and their abilities to perform within it. Major emphasis is placed on broadcast sales and promotion. Prerequisite: BCST 110, 111, 210, and 211.

BCST 313 News and Contemporary Issues — Introduces current regional, national and international issues appearing in the news media. Discussions focus on issues behind the issues, origins of issues, handling of news, writing style, line-ups, etc. Prerequisite: BCST 113.

BCST 314 Music and Programming — The music portion of this course focuses on the development and promotion of artists and their music, and the relationship of the music industry to the broadcast industry. The programming portion examines radio station formats and their implementation. Prerequisite: BCST 210.

BCST 315 Feature Program Production — This is an assignment-oriented course which focuses on the production of CFML's one-hour musical documentary program "AudioFile". Research, writing and production skills are applied throughout the course.

BCST 316 Audio Production — This is an assignment-oriented course which looks at the many facets of audio production including multi-track recording, commercial production, documentary production, audio-visual production and music recording and production.

BCST 320 Television Production — Upon successful completion of this course, students will be able to demonstrate their professional competency as members of a television production team as they rotate through all respective positions. Studio, field and post-production activities will be assigned to meet the production of a variety of program formats. Students will assume all managerial, production and support function responsibilities. Prerequisite: BCST 120, BCST 220.

BCST 322 Television News — Students learn more sophisticated visual techniques which are put to use in the daily preparation of Electronic News Gathering stories. Lectures are interspersed with several newscasts throughout the term.

BCST 331 Media Law — It is important for a broadcaster to be trained to function within the Canadian judicial system. This course explains the inner workings and the various levels of courts, and it familiarizes students with Canadian criminal law and the laws of libel and slander. Prerequisite: BCST 232 or BCST 233.

BCST 332 Radio News — Students now begin structured newsroom operations. They are divided into groups to operate the student radio station and the two newsroom labs. Some students are also given off-campus assignments to give them experience as beat reporters at courthouses, city and municipal halls and police headquarters. Students are given frequent individual and class performance critiques. Prerequisite: BCST 232.

BCST 333 Television News — Students bring ideas for news stories to class where these ideas are produced to fit the formats of television news. While most of the emphasis will be on ENG production, occasional stories may warrant the use of studio and graphic facilities. Stories are incorporated into news programs that are produced in conjunction with the television production option. Prerequisite: BCST 233.

BCST 334 Advanced Television News Production — Develops the student's ability to apply advanced production techniques and styles to the preparation and presentation of television news.

BCST 336 Advanced News Writing — Teaches students to develop and write stories incorporating the creative and factual aspects of news. Students learn how to look for story elements which hold the interest of an audience, and to relate those elements with maximum clarity and impact. Assignments are generated by students and the completed work is critiqued in class.

BCST 409 Practicum — During the last month of the final term, students are located in industry positions to observe, practice, work and learn in actual industry situations. This "real world" experience complements the training and experience received in the past two years, providing final preparation for assuming paid positions as a start to broadcast careers. Prerequisite: Successful completion of ALL Level 1, 2 and 3 courses.

BCST 412 Radio Operations — Using the operation of the campus radio station as a base, students specialize in desired work areas and are fine-tuned in preparation for entering the industry. Much emphasis is placed on preparation for job applications and industry interviews. Under the co-operative education program, eligible students may enter full-time, paid positions in industry while continuing their studies via correspondence assignments. The course concludes in mid-April, at which time students commence practicum assignments. Industry practices and standards prevail throughout the course. Prerequisite: BCST 110, 210, 310.

BCST 415 Feature Program Production — See BCST 315. Prerequisite: BCST 315.

BCST 420 Television Production — see BCST 320. Prerequisite: BCST 320.

BCST 422 Television News — Regular television newscasts are produced by Television and Broadcast Journalism students. ENG stories produced by these students are used in the production of studio newscasts. Prerequisite: BCST 322.

BCST 430 Investigative Reporting — Even though all reporting involves the investigative process, this course prepares the student for specialized reporting on public affairs and consumer research. The student is taught specific research and interviewing techniques and is expected to complete a major investigative project. Prerequisite: BCST 235.

BCST 431 Labor and Business — As students approach graduation, it is important that they have a good understanding of labor unions and the management structure. This course explains the structure of unions as well as the labor laws of BC and Canada. The second part of the course explores the complexities of business, finance and the stock market. Prerequisite: BCST 332 or BCST 333.

BCST 432 Radio News — This is the advanced course in newsroom operations. Students continue to practice the skills of reporting, writing and announcing, and work in the field as well as operating the student radio station and the news labs. The major thrust of this course is to identify student weaknesses and to assist students in strengthening their performance for entry into the industry. Prerequisite: BCST 332.

BCST 433 Television News — This course is a continuation of the third term television news lab. While the format for both courses is the same, the standards of evaluation in the fourth term are raised to reflect the expectations of professional broadcast journalism. Prerequisite: BCST 333.

BCST 435 History and Social Issues — Students are introduced to concepts from the social sciences — especially group membership, society, culture, ethnicity, alienation and deviance. Topics are related to recent or current news stories from British Columbia and Canada, and include B.C. history, ethnic groups, Canadian regional economic development and issues in Canadian society. Class time is divided between lectures, discussions and student presentations.

BCST 437 Industry Preparation — This course is designed to give the student final preparation for graduation and employment. Students prepare a resumé and audition package which is distributed to radio and TV stations in Western Canada. Part of the course familiarizes students with sales, marketing and newsroom management. Prerequisite: BCST 331.

COMP 112 Computers in Broadcasting — The computer is an important servant of broadcast communication. Topics include application processing for the radio, journalism and television fields along with general systems analysis and design for the business areas of broadcasting including program logs, record library, computer graphics and word processing.

MKTG 100 Marketing 1 — A customized marketing course providing a study of the foundations and principles of marketing with emphasis on broadcast media applications. Covers basic marketing functions, research, distribution, promotion, etc.

OPMT 319 Statistics for Broadcasters — A customized statistics course, designed to introduce broadcasting students to the world of collecting, summarizing and treating data to facilitate its use and comprehension. Forecasting techniques are discussed, along with measurement procedures employed in opinion polling and broadcast ratings systems.

FINANCIAL MANAGEMENT

Accounting Finance

No enterprise can survive without the means for funding and financial control, and in modern business the techniques of financial management — financial planning, budget preparation and financial control — have gained increasing importance as management tools. BCIT students may specialize in accounting or finance.

Job Opportunities

Specialists in accounting commonly enter middle management positions in financial accounting, cost accounting, internal audit and budget preparation.

Graduates in finance are placed in a variety of positions — in banks, trust companies, insurance companies and finance companies, as well as in the finance departments of businesses, industries and government. After gaining appropriate experience, finance specialists may rise to the managerial level and beyond.

The Program

Following a year of general studies in business, students will enter one of two options: Accounting or Finance.

The Accounting Option is concerned with management accounting systems, financial reporting and auditing. The second year courses in this option build upon the accounting, data processing and computer systems fundamentals introduced in the first year with increased concentration on financial and cost accounting.

The Finance Option deals with the intricacies of funding business operations. In addition to a thorough grounding in financial accounting, students in this option make an in-depth study of financial decision making in their second year of the Financial Management program.

Direct Entry to Second Year

Applicants who already possess a university degree, associate of arts certificate or a diploma of technology may be eligible for direct entry to the second year of either the Accounting option or the Finance option. Those applicants who have completed the equivalent of our first-year program may also be eligible for direct entry to second year. All applicants are encouraged to contact the department directly to clarify their opportunities.

Prerequisites

Algebra 11 and English 12 with C+ are the minimum course requirements for this program. Applicants must have an inquiring and logical mind, a capacity for hard work, excellent communication skills and the ability to work well with others. Preference is given to applicants with an average of better than C+ in grade 12 courses and to applicants with at least two years of full-time work experience. Candidates who do not meet these requirements are to include with their application a letter (with references) outlining their career objectives and

reasons for selecting Financial Management, to enable the departmental selection committee to consider their application. A preadmission interview may be conducted by members of the Financial Management Technology to assess applicants' suitability for the field, including written and oral communication skills.

Professional Accreditation

The accounting profession, through its professional bodies, recognizes a wide variety of accounting subjects offered in the program. The Canadian Institute of Chartered Accountants, the Canadian Certified General Accountants' Association, the Society of Management Accountants and the Canadian Credit Institute give credit for various subjects.

In addition to the professional bodies, universities will give credit for subjects taken in the program where students wish to continue their training and qualify for a university degree. For example, graduates of the Financial Management Diploma program are eligible to transfer to the Open Learning Institute Bachelor of Arts in Administrative Studies program to continue their studies toward a degree.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource market. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 110 Management 1 — An orientation to the nature of business in the private enterprise system, embracing forms of business ownership, production, management principles and techniques, as well as the functions of planning, organizing and staffing. Students are given an opportunity to develop their analytical skills by analysing, deliberating upon and proposing solutions to typical case problems.

ADMN 200 Macroeconomics — Develops an understanding of the organization and operation of the Canadian economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income employment, inflation, money and banking, international trade and growth. An appreciation of the relationship between economic theory and economic policy is provided.

ADMN 211 Management 2 — Follows on from Management 1 to give further insight into the functions and practice of management. Areas covered include the main functions of directing, controlling, and strategic planning, as well as decision making and a brief introduction to industrial relations. The student will be expected to create a business plan as part of this course.

ADMN 222 Organizational Behavior — The study of the main factors that either influence or are influenced by people at work. The course will focus first on micro or individual factors such as values, attitudes, perception and motivation. This is followed by a look at such macro or group factors as leadership, communication, supervision, power, conflict and change.

ADMN 385 Business Law — A one-term, condensed course which acquaints the business student with a basic knowledge of Canadian law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

BCOM 104 Business Communication for Financial Management — Prepares students to meet the business communication demands of financial management positions. They learn to plan, organize and write effective business letters and memos. They will also prepare and present oral reports.

BCOM 108/208 Business Communication — January Intake for Financial Management — This course covers the topics from BCOM 104/204 but in a different sequence.

BCOM 204 Business Communication for Financial Management — Gives further instruction and practice in the principles taught in BCOM 104. In this term, instruction will concentrate on how to write short and long reports, prepare more complex oral presentations and conduct meetings and interviews. Prerequisite: BCOM 104.

COMP 100 Data Processing: Introduction — Training in basic data processing principles to develop recognition of the application of these principles to industry. The principal functions of data processing are illustrated and practised with an H.P. minicomputer operating interactively. Elementary computer programs are written and tested on the computer. Use of flow-charting and elementary data processing systems design will illustrate the achieving of data processing objectives.

COMP 106 Introduction to Data Processing — This course combines all of the topics included in COMP 100 together with the business systems analysis topics from COMP 120. (The remaining topics from COMP 120 are covered in COMP 125.)

COMP 120 Computers in Business — Designed to give the student an understanding of business computer systems. Topics include computer hardware — types, usage, evaluation; systems development — feasibility studies, analysis, design, implementation; packaged software — use and evaluation. Emphasis will be placed on particular areas of interest to the specific technologies.

COMP 125 Computers in Business — The follow-up course to COMP 106. Topics from COMP 120 which were not covered in COMP 106 will be covered in this course.

FMGT 101 Accounting 1 — Permits persons with little or no accounting background to become familiar with the techniques of working through the full accounting cycle. The course provides theoretical and practical training in basic accounting as preparation for FMGT 201. Topics include an introduction to accounting theory; income measurement; traditional record-keeping procedures; the accounting cycle; special journals; cash; merchandising operations; inventory estimation and costing.

FMGT 106 Credit and Collections — A detailed examination of credit granting, collection techniques and credit philosophy in all levels of business prepares the student to assist the credit manager of a large or small business in any area of the subject. Topics include determining consumer credit risk; credit instruments and collateral security; types of consumer credit and credit cards; sources of consumer credit information; collections; credit department management. Mercantile credit management includes: risk analysis; sources of information; terms of sale and credit limits; collections; management; financial statement analysis; accounting for receivables; credit legislation.

FMGT 115 Accounting 1L — Enables students to start the basic course in accounting in January. It is the equivalent of FMGT 101 and the first six weeks of FMGT 201 for a total of 18 weeks of the 30 week presentation. The balance of the course may be taken in either May or September FMGT 215. For a description of the course content see FMGT 101/201.

FMGT 201 Accounting 2 — The follow-up to FMGT 201, topics include notes and accounts receivable, long-lived assets, liabilities, partnerships and corporations, cash-flow, manufacturing accounting, management accounting, consolidated statements and analysis of financial statements. Prerequisite: FMGT 101.

FMGT 215 Accounting 2S — Follow-up course to FMGT 115, enabling students to complete the last 12 weeks of the basic accounting course. See FMGT 201 for details. Prerequisite: FMGT 115.

FMGT 291 Financial Reports — The purpose of this course is to provide Financial Management students with skills in formal reporting. They will have the opportunity to analyze an organization first hand, talk to key personnel and investigate that firm's financial and organizational make-up. Operating as part of a small syndicate, students will make a formal oral presentation to a large group in a theatre setting using audio/visual techniques and equipment. Corequisite: FMGT 106.

FMGT 292 Computerized Accounting — Enables the student with an introductory financial accounting background to utilize this knowledge in a computerized setting. Students progress through a microcomputer accounting package that will provide them with the flexibility to adapt to many accounting packages that are currently available in the market place. The emphasis of this course is to upgrade the ability to handle modern accounting software packages on the microcomputer. Prerequisite: FMGT 101 or 115.

FMGT 301 Cost and Managerial Accounting 1 — Emphasizes the role of the management accountant, cost concepts and terminology, cost flows, cost allocation, job and process costing, service departments and joint products. Prerequisite: FMGT 201 or 215.

FMGT 302 Financial Accounting 1 — For students with basic accounting knowledge to broaden their understanding of the accounting process and its underlying theory. This course and FMGT 402 prepare them for career advancement and advanced study in accounting. Topics cover development of financial information for external circulation; the accounting process from a more analytical and judgmental standpoint; the income statement and balance sheet; cost, valuation, presentation and income measurement problems associated with current assets and current liabilities. Prerequisite: FMGT 201 or 215.

FMGT 307 Finance 1 — The two major aims of corporate finance are (1) the efficient allocation of funds within the enterprise and (2) the raising of funds on as favorable terms as possible. This course focuses on the following topics related to these overall aims: corporate organization and taxation, allocation of funds through financial markets, valuation of financial instrument, financial statement analysis and working capital management. Prerequisite: FMGT 201 or 215.

FMGT 308 Security Analysis 1 — This is an introductory level course in investments. The first part examines the impact of economic activity on financial assets and provides a macroeconomic framework for an understanding of the interaction of these markets. The second portion deals with investing in common stock with particular attention paid to their nature, analysis and valuation. Prerequisite: FMGT 201 or 215.

FMGT 310 Auditing 1 — Discusses auditing principles, specific techniques in analytical auditing and some asset classifications. Students study the meaning and purpose of the audit function and are introduced to techniques and procedures. Topics include history, professional ethics, internal control, auditing EDP systems, gathering evidence, audit work papers. Prerequisite: FMGT 201 or 215.

FMGT 313 Taxation 1 — Introduces individuals with little or no income tax knowledge to the basics of Canadian income tax. The course constitutes the first half of taxation with FMGT 409 completing it. Topics include tax information sources, residency, classes of taxpayers, employment income, business income, investment income, capital cost allowance and capital gain rules. Prerequisite: FMGT 201.

FMGT 318 Microcomputer Systems — Students will receive instruction and practice in the use of commercially available microcomputer software systems and will use these systems to solve business problems. Typical programs will involve word processing, electronic worksheets, data base management and business graphics. Prerequisite: COMP 120 or 125.

FMGT 401 Cost and Managerial Accounting 2 — Emphasizes budgeting and control, standard costs and variances, variable costing, cost estimation cost-volume-profit analysis, differential costs, multiple-product decisions and inventory management. Prerequisite: FMGT 301.

FMGT 402 Financial Accounting 2 — Completes the study of intermediate accounting necessary for employment in more responsible accounting positions. Topics include cost, valuation, presentation, income measurement problems associated with long term assets and liabilities (where appropriate), shareholders' equity accounts, income tax allocation, statement of changes in financial position (cash flow), statements from incomplete data, accounting changes, errors, accounting for leases and price-level changes. Prerequisite: FMGT 302.

FMGT 404 Finance 2 — This course continues where FMGT 307 left off and focuses on: sources of short, medium and long-term financing; capital budgeting techniques (IRR and NPV), determining the cost of capital, financial leverage and capital structure, equity sources of funds, common, preferred, rights, warrants and convertibles, to close with an analysis of mergers and take-overs. Prerequisite: FMGT 307.

FMGT 405 Security Analysis 2 — Techniques and principles of security analysis; valuation of securities; analysis of risks inherent in all types of fixed income investments. Emphasizes the investment setting, the securities market, investment timing and portfolio analysis of both individual and institutional investors. Prerequisite: FMGT 308.

FMGT 406 Auditing 2 — Follow-up to FMGT 310. The student studies general auditing principles and specific audit procedures and learns to critically assess accounting procedures. Topics include auditing assets, liabilities, owner's equity, revenues, cost, expenses, financial statements and audit reports. A short audit case will be undertaken. Prerequisite: FMGT 310.

FMGT 407 Microcomputer Applications — A continuation of FMGT 318 emphasizing the solution of practical problems. It is expected that students will develop a level of familiarity with software programs and applications such that they will use them in their other course areas. Prerequisite: FMGT 318.

FMGT 409 Taxation 2 — Students expand on their study of Canadian income tax begun in FMGT 313 and become aware of the complexities and problem areas involved in tax planning. Topics include tax on individuals (including proprietors and partners), corporations and trusts, corporate surplus distributions, international income, appeal procedures, tax planning and tax avoidance versus tax evasion. Prerequisite: FMGT 313.

FMGT 411 Projects In Industry — To provide experience in the practical application of concepts learned in their program, students work directly on a problem-solving project provided by a company or government agency. Prerequisite: Completion of Term 3.

FMGT 412 Security Fundamentals — An introduction to the fundamentals of investing including market mechanics, the investment setting, technical and fundamental analysis of common stock, preferred stock and corporate bonds. Prerequisite: FMGT 201 or 215.

FMGT 413 Business Strategies — A business simulation or game which applies the principles and decision-making techniques of the Finance 1 and 2 courses to the operation of a company. Operating within the Canadian tax system and a simulated economic environment, the student will attempt to enhance the value of the firm by means of sound marketing, production, capital budgeting and financing decisions. Prerequisite: FMGT 307; Corequisite: FMGT 404.

FMGT 414 Advanced Finance — Familiarizes the student with the fundamentals of raising funds. Emphasis is placed on various sources of funds with particular focus on the types, their benefits and costs. Topics covered will include bank financing, government funding and venture capital. Prerequisite: FMGT 307.

FMGT 415 Advanced Accounting — The student will review GAAP and objectives of financial reporting as these relate to the main objectives of this course. A closer examination of corporate combinations will be undertaken including consolidations for wholly-owned and non-wholly-owned subsidiaries (both in the year of acquisition and in subsequent years) and pooling of interests. Accounting for foreign currency transactions will also be studied, along with fund accounting and branch operations. Prerequisite: FMGT 302.

FMGT 430 Money and Banking — Examines central banking and monetary control, financial assets and financial markets, objectives and techniques of monetary policy, money and the international economy. Prerequisite: ADMN 100 and 200.

MKTG 102 Introduction to Marketing — Includes a detailed study of the basic marketing functions, marketing research, product planning, selection of trade channels, merchandising, advertising, sales promotion and salesmanship. Marketing of consumer goods as well as industrial goods will also be covered.

OPMT 112 Business Mathematics — Review of basic mathematics applicable to business and industry, consumer and commercial credit. Simple and compound interest, financial instruments and discounting, annuities, mortgages, loans, sinking funds, leases. Depreciation methods, capitalised costs. Cash flow analysis, NPV, IRR. Emphasis is on maximum use of preprogrammed calculator, and practical application from the field of financial management.

OPMT 132 Business Statistics — Will enable students to acquire skills in summarizing and analyzing data using descriptive and inferential statistical techniques. Topics include graphical presentation of data, measures of location and variation, elementary probability and standard distributions. Elementary sampling theory, estimation and confidence intervals, hypothesis testing, linear regression, correlation, index numbers and time series. Emphasis is on practical applications in the field of Financial Management.

FOOD AND HOSPITALITY ADMINISTRATION

**Commercial Baking
Professional Cook Training
Retail Meat Processing
Retail Meat Wrapping
Sausage Making and Smoked Meats
Hospitality Administration**

Food Trades

Commercial Baking

The Program

Training covers all aspects of the baking trade, including bread, cookies and special occasion cakes. Theoretical instruction will include safety, sanitation and hygiene, weighing and measuring techniques and devices, baking terminology, food handling and elementary management. The program's emphasis is on the theory and practical knowledge of basic commercial baking preparation.

Program Content

Food handling and storage
Sweet yeast production
Bread baking technology
Pies, cakes and flans
Cookies and petits fours
Sugar art work
Flowers of royal icing and marzipan
Analysis of materials and terms
Special occasion cakes, wedding cakes
Puff pastries
Buns and rolls
French pastries
Seasonal products
Plant safety factors; sanitation and hygiene
Elementary management
Operation of bakery machinery and use of hand tools
Customer relations

Length of Program

9 months — Intakes every 4 weeks.

Prerequisites

Grade 10 or mature student. Applicants are required to present a recent medical certificate and proof of chest x-ray or TB test.

Career Potential

Employment opportunities may be found in large and small bakeries, hotels and restaurants, department stores and large food chain stores. Many graduates have successfully started their own businesses.

Instructors

Fred Andermatt
Hans Leber
Wilhelm Liesch, Chief Instructor

Professional Cook Training

The Program

Cook training covers all areas of short order, institutional, a la carte and banquet cooking. Students are trained to plan menus, prepare and present foods attractively, cook in quantities, bake, and manage kitchen activities.

Program Content

Level 1: Short Order Cook/Short Order Lab — 5 Weeks

Salad; sandwich; grill; sanitation (must pass Burnaby Health Dept. Food Handlers' Certificate); safety; broiling; basic soup; basic dessert; roasting; gravies; garnish; seafood; breakfast cooking; basic vegetable; microwave use; poultry and meat identification; principles of cooking; service preparation; salad bar.

Short Order Practical — 10 Weeks

Short order practical in short order kitchen and Culinaire Dining Room.

Training in Industry — 5 Weeks

With instructor supervision.

Level 2: Institutional Cook/Cafeteria and Institutional Lab — 5 Weeks

Vegetables; poultry; sauces; seafood; soups; stocks; meat, poultry and fish cutting; salads; fancy sandwich; meat cooking; basic desserts and pastry; meat identification; sanitation; receiving and storing; daily records; basic menu construction; salad bar; service preparation.

Institutional Practical — 10 weeks

Institutional practical in cafeteria kitchen.

Training in Industry — 5 weeks

With instructor supervision.

Level 3: A La Carte and Banquet Cook Lab — 5 weeks

Vegetables; soup; meat; poultry; seafood; sauces; buffet advanced work; pastry; yeast; cakes; advanced desserts; basic kitchen management; veal, pork and lamb cutting; storeroom control; banquet service; garde manger; ice carving; beef fat sculpture; curing and marinating; pates; terrines; galantines; a la carte cooking; buffet; banquets.

Production A La Carte/Banquet Hot and Cold Kitchen — 10 weeks

A la carte/banquet practical in Culinaire Dining Room kitchen.

Storing, Receiving, Purchasing and Basic Management — 5 Weeks

Practical in storeroom.

Length of Program

15 months consisting of three 5-month levels

Prerequisites

Good health, a high standard of personal hygiene and the ability to stand and walk as required during busy periods. All applicants will be required to present a recent Health Certificate as required by the Department of Health for the handling of food, and proof of a recent TB test upon confirmation of a start date.

A challenge examination may be taken by anyone who has had industry experience or High School Career Preparation courses. Full credit for the next level of training will be given on the successful completion of the examination.

Level 1: Grade 10 or mature student.

Level 2: Successful completion of Level 1 or challenge examination for Level 1.

Level 3: Successful completion of Level 2 or challenge examination for Level 2.

Note: The Professional Cook Training program has three levels of instruction. Students must make application to all levels desired. Students are not guaranteed entry into the next level of training; breaks in training could occur due to late applications, insufficient space in the next level or unsuccessful completion of previous level.

Retail Meat Processing

The Program

The meat processing course is designed to teach the many aspects of meat cutting and provide an environment in which students can be exposed to the efficiency, effectiveness and economics of current meat merchandising in preparation for employment. The training centre is well equipped with power machinery and the necessary meat cutting accessories. Maintenance, sanitation and proper care of equipment are stressed, and principles of safety are observed and practiced at all times. An introduction to merchandising and basic shop management is also provided through practical experience. Students are encouraged to take pride in their work for personal satisfaction and for good consumer relations. On-the-job training in industry for two weeks gives exposure to the retail meat industry which is very beneficial.

Program Content

Level 1: Primary meat cutting provides training for persons who wish to seek employment in packing house locker plants or related fields. It provides sufficient meat cutting basics for those who show the necessary ability and potential for further advanced training.

Level 2: Advanced meat cutting provides training oriented toward making students more readily employable in retail meat outlets.

Safety
Sanitation in the work area
Personal and equipment hygiene
Wholesale and block-ready primals
Retail block-ready cuts
Processing freezer orders
Service meat case merchandising
Self-service meat case merchandising
Processing poultry, pork, lamb, veal, fish and beef
Receiving
Basic management and all aspects of meat cutting
Use and care of equipment and hand tools
Customer relations

Length of Program

6 months (Level 1: Primary Meat Cutting 3 months; Level 2: Advanced Meat Cutting 3 months)

Prerequisites

Grade 10 or mature student. Applicants are required to present a recent medical certificate and proof of recent chest x-ray or TB test.

Career Potential

Following graduation from the retail meat processing course, students may find employment in packing houses, block-ready shops, locker plants and small butcher shops; the more successful students may be employed in supermarkets.

Instructors

Robert Audette
Sid Heringer, Chief Instructor
Jack Stacey

Retail Meat Wrapping

The Program

This program provides training for persons who wish to seek employment in packing houses, locker plants, retail meat shops and related fields. It provides sufficient meat wrapping knowledge and experience to make students more readily employable in the meat industry.

Program Content

Safety and sanitation
Health regulations
Personal hygiene
WCB regulations
Use of equipment
Housekeeping
Refrigeration factors (basic)
Meat wrapping
Customer contact
Meat identification
Shelf life and conversions
Culling and re-wraps
Case layout
Signage
Inventory (basic)

Length of Program

3 months

Prerequisites

Grade 10 or mature student. Applicants are required to present a recent medical certificate and proof of recent chest x-ray or TB test.

Career Potential

Upon successful completion of the meat wrapping program, students may seek employment in retail meat shops, delicatessens and other related shops.

Instructors

Robert Audette
Sid Heringer, Chief Instructor
Jack Stacey

Sausage Making and Smoked Meats

The Program

The manufacturing of sausage and smoked meats for wholesale and retail stores and delicatessens is a highly specialized skill. Training is designed to prepare graduates for employment by teaching all aspects of sausage making. Students are taught to use machinery and hand tools in the sausage making process in a well-equipped training centre with smokehouse and sausage making equipment. Maintenance of sanitation and proper care of equipment are stressed, and principles of safety are observed and practiced at all times. A four week on-the-job training component is provided. Students will be placed in areas of the industry appropriate to their training. An introduction to merchandising and shop management is also provided. Students are encouraged to take pride in their work for personal satisfaction and for good customer relations.

Program Content

- All aspects of sausage making and smoked meats
- Use and care of equipment and hand tools
- Sanitation in the working area
- Personal and equipment hygiene
- Safety practices
- Introduction to merchandising and shop management
- Customer relations

Length of Program

8 months

Prerequisite

Grade 10. Mature students who do not meet the educational requirements may have related work experience assessed. Good health and physical ability are required, along with a determination to succeed. Applicants are required to present a recent medical certificate and proof of recent chest x-ray or TB test.

Career Potential

Graduates of the Sausage Making and Smoked Meats program may obtain employment in supermarkets, independent butcher shops, sausage making shops, delicatessens and packing houses.

Instructor

Gerhard Spieckermann

Hospitality Administration

The Hospitality and Tourism industry is fast becoming the number one industry in British Columbia. It is already the industry which has the most employment opportunities. The demand for professionally educated and trained people who will lead B.C. into new and dynamic economic growth gets stronger each day. British Columbia will continue to build on the legacy of Expo 86 and to firmly entrench itself as a desirable tourist destination.

Job Opportunities

Hospitality Administration graduates are employed in hotels, motels, restaurants, department store food services, golf and country clubs, tourist facilities such as ski resorts, private and industrial catering firms, and in a wide variety of other organizations involved in food services and housing such as hospitals, schools and universities. Graduates also operate their own hospitality businesses such as restaurants, hotels, private catering and convention planning firms.

The Program

In the first year of the two year program, students will study general business management courses applied to a hospitality and tourism industry setting. Introductory courses in Hospitality Administration will also be taught. Some of the general business courses are creditable for university transfer.

The second year program consists of hospitality management courses which include food, beverage, labor cost controls, human relations, marketing for the hospitality industry, and a directed study course.

All students are required to complete 500 hours of work practicum in some aspect of the hospitality and tourism industry between the date of registration and graduation.

Prerequisites

English 12 and Algebra 11, both with C+ or better, are course requirements for this program. High School graduates who have successfully completed the Career Preparation Program (C.P.P.) in Hospitality and Tourism should so indicate on their BCIT application, for possible special consideration. A second language is also an asset.

Applicants should be reasonably familiar with the components and careers available in the hospitality and tourism industry. Preference will be given to applicants with a minimum of 6 months (1,000 hours) of industry-related practical work experience.

Applicants should be good communicators and people-oriented, with a willingness to relate harmoniously and effectively with the public and fellow workers. Upon entering the industry, they should be prepared to work long and irregular hours.

Informational meetings about the program and career opportunities in the hospitality and tourism fields, are offered from February through May. Applicants may also be invited to an interview with a faculty member and an industry representative, and may be required to outline their reasons for applying to the Hospitality Administration Technology.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource market. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 103 Fundamentals of Management — An orientation to the nature of business in the private enterprise system embracing forms of business ownership, organization, leadership, management techniques and business elements of production. Typical cases taken from industry are studied to encourage students to think and decide for themselves.

ADMN 200 Macroeconomics — Develops an understanding of the organization and operation of the Canadian Economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income, employment, inflation, money and banking, international trade and growth. An appreciation of the relationship between economic theory and economic policy is provided.

ADMN 385 Business Law — A one-term condensed course to acquaint the business student with a basic knowledge of Canadian law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

BCOM 105 Business Communication for Hospitality — An applied writing course concentrating on effective letters and memos. Topics and case assignments are selected to develop the skills necessary for successful management communication in the hospitality and tourism industries.

BCOM 205 Business Communication for Hospitality — Adds report design techniques to the skills learned in BCOM 105. Students write several types of informational, periodic and analytical reports designed to meet specific management needs. Prerequisite: BCOM 105.

COMP 100 Introduction to Data Processing — Offers training in basic data processing principles to develop recognition of the application of these principles to industry. The major functions of data processing will be illustrated and practised with a minicomputer operating interactively. Elementary programs will be written and tested on the computer. Use of flow-charting and elementary data processing systems design will illustrate the achievement of data processing objectives.

COMP 120 Computers in Business — Designed to give the student an understanding of business computer systems. Topics include computer hardware — types, usage, evaluation; systems development — feasibility studies, analysis, design, implementation; packaged software — use and evaluation. Emphasis will be placed on areas of particular interest to Hospitality and Tourism Industries.

FMGT 101 Accounting 1 — Permits persons with little or no accounting background to become familiar with the techniques of working through the full accounting cycle. It provides theoretical and practical training in basic accounting as preparation for FMGT 201. Topics include accounting as an information system; introduction to accounting theory; income measurement; traditional record-keeping procedures; the accounting cycle; special journals; cash; investments and receivables.

FMGT 201 Accounting 2 — The follow-up to FMGT 101, topics include inventory, long-lived assets, liabilities, forms of business organizations, cash-flow and working capital analysis, manufacturing accounting, management accounting, consolidated statements, analysis of financial statements and price level changes. Prerequisite: FMGT 101.

HOSP 100 Beverage Operations — Covers the basic requirements needed to operate a bar or lounge. Subject areas include bar layout and design. B.C. Liquor Act, liquor classification and manufacture of spirits, wine and beer. Practical mixology in preparation of cocktails, pouring techniques, garnishes, mixes and setting up the bar. Wine and Beer Seminars.

HOSP 111 Hospitality Communications — An introduction to the principles of effective public speaking. The course allows students to develop confidence and to practice various types of public speaking: narrative, descriptive, persuasive, demonstrative, meeting and debate. The course also explores industry communication including resume development, letters of transmittal, practice with interview techniques and preparation of an interview.

HOSP 126/226 Rooms Division Operations — An introduction to the terminology and fundamental procedures used in hotel front office operations. The course explores front desk design and location, check-in/check-out procedures, reservation systems, guest services, cash and credit, psychology in dealing with guests, fellow employees and management; guest history systems, form designs and how they are used, equipment and materials, rooms salesmanship and handling complaints.

HOSP 200 Food Operations — Covers the basic skills required in preparing food, and lays the ground work for more advanced skills in the 2nd year. Enables participants to operate kitchen equipment safely, apply sanitation procedures, read, follow and prepare recipes, classify and prepare soups, stocks, sauces, fish and shellfish, meat, poultry, vegetable and egg dishes.

HOSP 209 Front Office Accounting — Takes the student through hotel front office accounting from the initial setting up of guest accounts-posting procedures and corrections to settling accounts and night audit procedures. The student will first be instructed in the manual system followed by demonstrations on mechanical and electronic systems. Finally, students will examine computer applications.

HOSP 225 Introduction to Marketing — Includes a detailed study of basic marketing functions, marketing research, product planning, selection of trade channels, merchandising, advertising, sales promotion and salesmanship. Marketing of consumer goods as well as industrial goods will be covered.

HOSP 302/402 Food and Beverage Management — Covers the theoretical application of food service management through lectures, assignments and seminars. Topics include the elements of management, training, and personnel management, menu making, purchasing requirements for food service systems; various types of restaurants (specialty, fast food, dining rooms, etc.) payroll systems, catering establishments, merchandising and promotional techniques.

HOSP 305/405 Food & Beverage Practicum — Applies theory from the lectures to practical laboratory sessions in a public dining room. Areas covered include serving, cashiering, hosting, bartending and food preparation. Includes rotation of various stations in a kitchen: short order, meats, fish, shellfish, vegetables, salads, soups, stocks and sauces.

HOSP 313 Food, Beverage and Labor Cost Controls — Fundamentals of internal controls and information systems for food and beverage operations. The course covers techniques of effective purchasing, receiving and production; sales controls; food and beverage cost calculations; the sales mix and its effect on costing. Course emphasis is on interpretation of data for effective and profitable decision-making. Labor cost controls methods are explained and discussed.

HOSP 316 Labor Relations — Addresses the labor relations process within the hospitality industry. Develops a solid appreciation of issues commonly found in collective bargaining and why labor and management behave as they do. Topics covered range from the historical evolution of Canadian unionism, the impact of trade unions on the hospitality sector, collective bargaining and labor-management relations, to existing labor legislation, mediation and arbitration.

HOSP 325 Marketing and Sales Promotion — Develops students' ability to apply the fundamentals of marketing to the hospitality, tourism and food service industry. Market segmentation, analysis and trend projection, market research, product strategy, real estate, leases, franchise agreements are all addressed. The course builds an understanding of all of the forces that impact the marketing mix and leads to the development of the market plan.

HOSP 330 Facilities Planning and Design — A study of the building and construction trades as they relate to the needs of the hospitality, tourism and food services industry. The ability to read and interpret blue prints, building codes, renovation cost estimates, zoning and city bylaws are studied. The fundamentals of building, sound maintenance practices, room design, functional planning, space requirements are all addressed as are the esthetics of light, sound, themes and atmospheres.

HOSP 375 Practicum in Industry — During the first month of Term 1, Year 1, each student will receive a "Career Passport of Hospitality and Tourism Experience" in which practical work experience will be recorded. The objective of the practicum is to provide each student with a minimum of 500 hours of proven work experience in the industry prior to graduation. Some credit may be given for work experience prior to registering at BCIT. No grade is assigned to this practicum.

HOSP 413 Hospitality Management Accounting — Preparation, interpretation and analysis of balance sheets and profit and loss statements; ratio analysis, budgeting and forecasting; feasibility studies; financing and cash flow; cost-volume-profit analysis; investment decision-making as applied to the Hospitality Industry.

HOSP 416 Human Resources Management — Addresses human resource management concepts with specific reference to recruitment and selection, employment equity, job descriptions, job specifications, job analysis, performance appraisal, training and development, human rights and employment standards and quality of working life as they apply to the hospitality industry.

HOSP 420 Organizational Behavior — Develops an understanding of the concepts that either influence or are influenced by people in the hospitality sector. The course focuses on micro and macro factors such as organizational structure, technology and environment, group dynamics and behavior, leadership, conflict resolution, power, politics, values and attitudes, perception, stress and personality theory and motivation.

HOSP 425 Marketing — Continues with the application and implementation of the marketing plan: product repositioning, setting up the sales office, development of sales tools and brochures, advertising, promotions, public relations, in house sales, external sales, salesplanning, media planning and budgeting. These topics are addressed in detail and, through practicum and case study, are applied directly to the hospitality, tourism and food service product. The inter-relationships of tourism industry components: carrier, wholesaler, agent, ground and transfer packages are addressed as they apply to the hospitality sector.

HOSP 431 Cultural Awareness — British Columbia is host to tourists and business people from all over the world. To give B.C. the marketing edge, this course is designed to identify the market segments, and then to study the unique cultural requirements of our visitors.

HOSP 450 Directed Studies — Students will pick a project that is related to the Hospitality Industry and, under the guidance and tutelage of their chosen faculty member, research, study and report in the form of a thesis or other means previously agreed upon. Students are expected to utilize and demonstrate knowledge, skills, and understanding gained from other courses in this two year program.

OPMT 111 Business Mathematics — Provides a review of basic mathematics applicable to business and industry and enables the student to acquire skills involving practical financial and mathematical problems encountered in business. Topics in the area of Mathematics of Finance will emphasize retail operations, discounts, simple and compound interest and annuities.

OPMT 131 Business Statistics in Hospitality — Major emphasis on descriptive statistics, including survey planning, questionnaires design, numerical and graphical presentation of data. Measures of central tendency and dispersion. Introduction to statistical inference through sampling, confidence intervals, hypothesis testing, linear regression. Emphasizes managerial applications in industry.

OPMT 165 Management Engineering — Management Engineering is concerned with achieving business goals through the most effective use of resources by objective decision-making. It is a general management course designed to supplement the specialized management courses given in the Hospitality Program. The course covers the decision-making process in four areas of application; time management, productivity improvement, project management and facility planning.

TOUR 231 Introduction to Tourism — An introduction to the Travel and Tourism industry including why tourism is growing in domestic and international markets; functions and inter-relationships of the various industry sectors; major organizations and associations and their influence on tourism; exploration of career opportunities in all facets of tourism; economic import of tourism and government initiatives in encouraging growth; current trends in travel; social and environmental impacts of tourism.

Life Skills — A short course on time management, stress management, attitude development and business attire to prepare students for entry into the hospitality industry.

Risk Management — Professional seminars to be presented by industry representatives, e.g. from Workers' Compensation Board, Fire Department, Health Department, Insurance Companies, St. John's Ambulance.

TOURISM AND MARKETING MANAGEMENT

**Professional Sales
Advanced Technology Marketing
Small Business Development
Real Estate Studies
Advertising and Sales Management
Tourism Management**

Marketing is the task of making available the service a firm or organization can offer to satisfy the needs of its customers or patrons. This means that people with marketing skills are needed in a wide range of organizations to perform many different functions. Manufacturers, professional services and non-profit institutions depend on marketing to sustain a viable, efficient operation.

Marketing managers concentrate on product development, market research, sales and promotion or they may find their jobs require the broad skills of all these areas.

The Tourism and Marketing Technology is designed to equip graduates with a solid generalist background, and allows students to concentrate on the unique skills associated with specific sectors of our economy. These include the technical consumer or industrial product/service sector; the Real Estate industry; the international trading sector, the business communications industry, and tourism firms and services.

Job Opportunities

The **Advanced Technology Marketing** program leads to career positions in manufacturing, wholesale and retailing firms, with emphasis on those that are exploiting new or rapidly changing technologies.

The **Professional Sales** program prepares individuals for positions in distribution companies that sell their products and services to commercial buyers and purchasing agents.

The **Real Estate Studies** program prepares the graduate for sales, agent, mortgage brokerage, appraisal, property management, investment analyst positions. Graduates may choose to pursue either licenced or non-licenced positions within the Real Estate industry.

Advertising and Sales Promotion graduates are employed in advertising agencies, broadcasting companies, publishing firms and in-house promotion operations.

The **Small Business Development** program is ideally suited to individuals planning to start their own businesses or becoming general managers in an established small firm.

The **Tourism Management** program prepares graduates for both private and public sector jobs in firms or organizations engaged in developing new tourism products and services or expanding the existing demand for these services.

The Program

In the first year, all Tourism and Marketing Management students complete the same course of studies covering general business and economic principles. The second year offers specialization. **Technical Sales and Marketing** emphasizes sales skills, new product development and entrepreneurship. **Real Estate Studies** addresses residential and commercial property sales and investment analysis skills. **Advertising and Sales Promotion** courses develop creative communication skills and campaign planning. **Tourism** focuses on the operational and marketing aspects of a wide variety of tourism facilities and services.

Prerequisites

Algebra 11 and English 12 both with C+ are entry requirements for this program. Completion of grade 11 and 12 science courses enhances chances for success in the program.

A personal interview with the program faculty may be required to obtain final acceptance.

Candidates **must** state program preference when applying for admission to the first year of the Tourism & Marketing Management Technology. Business experience and/or other successful post-secondary education is an asset. Admission may be granted to mature students provided they have completed high school at least 2 years prior to date of entry, are willing to complete pre-entry preparatory programs, and have acquired prerequisite work experience. Upon completion of the first year, candidates will be screened for appropriate second year option placement.

Course Descriptions

ADMN 100 Microeconomics — The major areas studied are the product and resource market. Students analyze supply and demand, how production costs vary and how prices are determined in various market structures. In addition, resource allocation and economic policy implications are explored.

ADMN 102 Management Marketing Technology — An orientation to the nature of business in the private enterprise system embracing forms of business ownership, organization, leadership, management techniques and business elements of production. Typical cases taken from industry are studied to encourage students to think and decide for themselves.

ADMN 200 Macroeconomics — Develops understanding of the organization and operation of the Canadian Economy in an international setting. The theoretical tools of the economist are used to expand the concepts of national income employment, inflation, money and banking, international trade, and growth. An appreciation of the relationship between economic theory and economic policy is provided.

ADMN 385 Business Law — A one-term course. It acquaints the business student with a basic knowledge of Canadian law including the legal system, contracts, torts, sale of goods and consumer protection, secured transactions and creditors' remedies, employment law and agency, business organizations, negotiable instruments, real estate and administrative law.

ADMN 386A Law for Advertising — A nine-week condensed version of ADMN 385 created as a prerequisite for ADMN 387. ADMN 386 is not a substitute for ADMN 385.

ADMN 387 Law for Real Estate Marketing — A nine-week course which covers the case law and legislation relevant to real property: interest in land, B.C. land registration system, agency, mortgages, tenancies, condominiums, real estate agents and land use planning. Prerequisite: ADMN 385 or ADMN 386.

BCOM 106 Business Communication for Marketing — Introduces students to the fundamentals of business writing. Students study various marketing communications including letters, memos, questionnaires and news releases.

BCOM 206 Business Communication for Marketing — Extends the material covered in BCOM 106 and deals with both written and oral presentations. Short and long reports, job application packages, research techniques and graphic techniques are covered. Emphasis is on practical aspects of professional marketing communication. Prerequisite: BCOM 106.

COMP 100 Data Processing — Introduction — Offers training in basic data processing principles to develop recognition of the application of these principles to industry. The principal functions of data processing are illustrated and practised with an H.P. minicomputer operating interactively. Elementary computer programs are written and tested on the computer. Use of flow-charting and elementary data processing systems design will illustrate the achievement of data processing objectives.

COMP 120 Computers in Business — Designed to give the student an understanding of business computer systems. Topics include computer hardware: types, usage, evaluation; systems development: feasibility studies, analysis, design, implementation; packaged software: use and evaluation. Emphasis will be placed on areas of particular interest to specific technologies. Prerequisite: Comp 100.

FMGT 101 Accounting 1 — Permits persons with little or no accounting background to become familiar with the techniques of working through the full accounting cycle. It provides theoretical and practical training in basic accounting as preparation for FMGT 201. Topics include accounting as an information system; introduction to accounting theory; income measurement; traditional record-keeping procedures; the accounting cycle; special journals; cash; investments and receivables.

FMGT 201 Accounting 2 — The follow-up to FMGT 101. Topics include inventory, long-lived assets, liabilities, forms of business organizations, cash-flow and working capital analysis, manufacturing accounting, management accounting, consolidated statements, analysis of financial statements and price level changes. Prerequisite: FMGT 101.

FMGT 403 Marketing Management Accounting — Emphasis is upon profit planning, pricing strategies and control in the marketing environment. Also studied are cost-accounting control concepts and applications, inventory management techniques, cash and capital planning techniques and revenue reporting systems. The course ends with a study of the implications for managerial decision-making of accounting reporting methods and policy. Prerequisite: FMGT 201, ADMN 110, MKTG 200, OPMT 110, OPMT 130.

MKTG 100 Marketing 1 — A comprehensive study of the foundations and principles of marketing intended for those students pursuing a concentrated marketing program. Covers basic marketing functions, marketing research, product planning, distribution activities, sales and promotion activities. Examines marketing in relation to all types of consumer, industrial and service firms.

MKTG 103 Sales Skills — Introduction to professional selling. Emphasizes practical problems of locating and qualifying prospects, use of depth approach and improving sales preparation and organization. Also examines improving interpersonal communications in non-selling situations.

MKTG 200 Marketing 2 — A continuation of MKTG 100. Prerequisite: MKTG 100.

MKTG 203 Sales Management — General principles of sales management. Emphasis is given to the human resource, with stress placed on selection, assimilation, training and supervision. Examination of sales research, planning, organization and analysis is made. Computer applications in sales management are also covered. Prerequisite: ADMN 100, ADMN 110, ADMN 200, BCOM 207, COMP 120, FMGT 201, MKGT 103, MKGT 200.

MKTG 301 Quantitative Methods/Computer Applications in Marketing — An examination of decision support systems now available utilizing mathematical modelling methods, data bank access, and computer based information. Prerequisite: ADMN 100, ADMN 110, OPMT 110, ADMN 200, BCOM 207, COMP 120, FMGT 201, MKTG 200, OPMT 130.

MKTG 302 Industrial Marketing — An examination of the complex purchase process faced by companies selling to industry, government and institutions. Alternative distribution and pricing strategies are considered. Emphasis is on understanding the growing British Columbia industrial base. Prerequisite: ADMN 100, ADMN 200, BCOM 207, MKTG 200.

MKTG 304 Market Strategies — The development of strategies suited to high technology products and services to achieve productivity improvement. Prerequisite: ADMN 100, ADMN 200, BCOM 207, MKTG 200.

MKTG 305 International Marketing — An examination of import/export procedures, particularly in relation to sophisticated technology products and services. Trading patterns and forecasts are thoroughly covered. Prerequisite: ADMN 100, ADMN 200, BCOM 207, MKTG 200.

MKTG 306 Principles of Small Business Management — Examination of the planning stages involved in starting a new business including market, financial and legal feasibility requirements. Prerequisite: ADMN 100, ADMN 110, ADMN 200, BCOM 207, FMGT 201, MKTG 200.

MKTG 308 Advertising and Sales Promotion — Covers fundamentals of mass communications, media characteristics, message design and campaign planning. Prerequisite: BCOM 207, MKTG 200.

MKTG 309 Marketing Research 1 — Examines the basic approaches to marketing research. It discusses the techniques and tools of this research and relates these tools to the decision-making process. Emphasis is placed on the use of marketing research in the total marketing decision concept. Special applications of marketing research to simulated real-life situations are examined. Prerequisite: ADMN 100, ADMN 200, BCOM 207, COMP 120, MKTG 200, OPMT 110, OPMT 130.

MKTG 311 Real Estate Management 1 — The real estate function includes law, estates and interests in land, and the personal and business management decision process. The economic characteristics of urban real estate and the market, city growth and development, locational factors in influencing the determination of land use and ownership, institutional lenders, the mortgage market and the functions of the real estate agency, salesman and appraiser are covered. This is a credit course recognized by the Real Estate Council of British Columbia and the Department of Real Estate Studies at UBC. It exempts graduates of the program entering the real estate brokerage business from the salesman's pre-licensing course. Prerequisite: ADMN 100, ADMN 200, BCOM 207, COMP 120, MKTG 200, OPMT 130.

MKTG 312 Economics of Real Estate Markets — Covers the basic principles and concepts relating to urban land economics and provides the tools for analysing the impact of economics on real estate markets.

MKTG 313 Introduction to Real Estate Analysis — Presents the tools and techniques for analysis that assist decision making in specific real estate problems including investment (purchase or sale), financing, development or redevelopment, leasing, income and property taxation and property management. In each of these areas, the use of mathematics of finance is central to analysis of the situation, the analysis of alternative courses of action and the comparison of costs/benefits, both today and in the future. Prerequisite: ADMN 100, ADMN 200, BCOM 207, COMP 120, MKTG 200, OPMT 110, OPMT 130.

MKTG 316 Principles of Advertising — Examines the evolution and function of advertising and sales promotion within the contexts of society and the business system. The topic is surveyed rigorously, with consideration being given to its application in the fields of retailing, wholesaling, manufacturing, professional and industrial activities. Prerequisite: ADMN 100, ADMN 200, BCOM 207, MKTG 200, OPMT 110, OPMT 130.

MKTG 317 Promotional Marketing — A study of all promotional support activities such as trade shows, publicity, special events, direct response marketing and promotional specialties. Emphasis is on when and how to use them. Prerequisite: ADMN 100, ADMN 200, BCOM 207, MKTG 200, MKTG 316, MKTG 318.

MKTG 318 Introduction to Media — Emphasis is placed on development and execution of the media plan. Close contact is maintained by students with agency media buyers and other industry factors to ensure a practical direction to the course. Quantitative media planning techniques are evaluated in light of most recent computer applications. The main objective of this course is to provide marketable skills in media planning and buying to qualify students for career entry in advertising agencies. Prerequisite: BCOM 207, COMP 120, MKTG 200, OPMT 110, OPMT 130.

MKTG 330 Real Estate Practice — Designed to apply the principles learned in real estate management on a practical basis. Students will learn to complete contracts required in real estate transactions; the forms of legal documentation concerning interests in land; land registration procedures; and how to search a title of real property at a land title office. Prerequisite: ADMN 100, ADMN 200, BCOM 207, MKTG 311, MKTG 200, OPMT 110, OPMT 130.

MKTG 333 Real Estate Marketing — Reviews, reinforces and expands the more important marketing concepts and theories which were taught in the introductory marketing course and examines how these concepts and theories can be applied to the real estate industry in a wide variety of areas. Particular emphasis will be placed on the development of real estate selling, negotiation and communication skills, and the development of real estate marketing programs and strategies. Prerequisite: MKTG 200 or 201, or MKTG 102.

MKTG 401 Marketing Planning — Examines how to develop a formal marketing plan including situation analysis, market and competitive conditions research, objective setting and action scheduling, using computer based management systems. Prerequisite: ADMN 100, ADMN 200, BCOM 207, COMP 120, FMGT 201, MKTG 103, MKTG 200, MKTG 301, MKTG 309, OPMT 110, OPMT 130.

MKTG 402A Advanced Sales Techniques — Professional selling skills utilizing buyer behavior, product knowledge, time management and sales call planning tools. Prerequisite: MKTG 103, MKTG 200, MKTG 203, MKTG 302, MKTG 308.

MKTG 403B Industrial Sales Practicum — Field work experience with the sales force of a sponsoring firm. Full evaluation of on-the-job performance is included. Prerequisite: MKTG 103, MKTG 203, MKTG 402.

MKTG 404B Information Systems Practicum — Examines the hardware/software systems, data sources, and resources available to marketers of high-tech products in gathering and dispensing needed information. Prerequisite: MKTG 301, MKTG 304, MKTG 309, MKTG 406.

MKTG 406A Product Development — A study of effective processes for generating product ideas, design planning, performance evaluation and market testing. Commercialization of highly innovative products is emphasized. Prerequisite: MKTG 301, MKTG 304, MKTG 309.

MKTG 407A Case Studies/Entrepreneurship — An analysis of both successful and unsuccessful ventures to reveal the role of the entrepreneur. Prerequisite: MKTG 306.

MKTG 408B Business Planning Practicum — Involves the student in the detailed preparation of a business prospectus. The student is required to demonstrate the legal markets and financial feasibility of a selected new venture. Prerequisite: MKTG 306, MKTG 407.

MKTG 409 Marketing Research 2 — Examines the basic approaches to marketing research. The course discusses the techniques and tools of this research and relates these tools to the decision-making process. Emphasis is placed on the use of marketing research in the total marketing decision concept. Special applications of marketing research to simulated real-life situations are examined. Prerequisite: MKTG 309.

MKTG 411 Real Estate Management 2 — see MKTG 311. Prerequisite: MKTG 311.

MKTG 412 Introduction to Real Estate Appraisal and Investment Analysis — Designed for use by appraisers, real estate brokers, lenders, builders, investors and assessors. On completion of the course, the student will have learned how to apply appraisal principles and techniques to actual residential appraisal problems. To become a professional appraiser, the student completing this course must add meaningful practical appraisal experience and further advanced training. The material covered will include such topics as principles of real estate, elements of urban land economics, nature and principles of real estate value, appraising as applied economics analysis, feasibility studies, which includes investment analysis and the various indices used to measure a 'return'. For students seeking credit in recognized programs of professional appraising societies. Prerequisite: MKTG 311, MKTG 312, MKTG 313.

MKTG 413 Mortgage Finance — Will enable students to demonstrate a knowledge of the macroeconomic aspects of Canada's mortgage market; structure and analyse both residential and commercial mortgage loan applications and be familiar with loan management, contemporary repayment arrangements, development financing, participation loans, leasehold financing and appraisal for mortgage lending. Prerequisite: MKTG 311, MKTG 312, MKTG 313.

MKTG 416 Advertising Internship — An assigned work experience position with a lower mainland advertising, promotion, broadcasting, print or graphic services operation. On-the-job performance is fully evaluated. Prerequisite: MKTG 316, MKTG 317, MKTG 318, MKTG 417.

MKTG 417 Design Production — Creative advertising starts with a powerful idea built upon a sound business strategy. The execution of the strategy can polish effective advertising into brilliance. This is a practical "how-to" course that starts with business direction and finishes with actual print and broadcast advertising. It examines computer graphics, laser separations as well as basic art design techniques. Of interest to those in advertising positions, media sales and graphic/printing sales as well as those with a general interest in the area. Prerequisite: MKTG 316.

MKTG 418 Directed Studies — One day a week of the student's timetable is allocated to carry out a major project. The project will be in a marketing area of the student's choice, carried out under the guidance of assigned faculty members. Prerequisite: ADMN 100, ADMN 200, BCOM 207, COMP 120, FMGT 201, MKTG 103, MKTG 200, MKTG 203, MKTG 309, OPMT 110, OPMT 130.

MKTG 430 Distributive Systems — A study of the channels and supporting infrastructure necessary to move products from manufacturer to consumer, including coverage of new technology applications to retailing and merchandising systems. Prerequisite: ADMN 100, ADMN 200, BCOM 207, COMP 120, FMGT 210, MKTG 103, MKTG 200, MKTG 203, OPMT 110, OPMT 130.

OPMT 110 Business Mathematics — Review of basic mathematics applicable to business and industry. Mathematics of finance including retail operations, simple and compound interest, discounts, annuities, financial papers and depreciation methods. Emphasis is on practical applications to business administration.

OPMT 130 Business Statistics — Major emphasis is on descriptive statistics, including numerical and graphical presentation of data, measures of central tendency and dispersion, elementary probability, index numbers and time series. Introduction to inferential statistics through selected topics such as sampling, confidence limits of the mean, hypotheses testing and simple linear regression.

TOUR 160 Introduction to Tourism — An overview of the tourism industry structure and impacts. Course topics examine the industry sectors; common industry terminology; sector inter-relationships; British Columbia Tourism Regions; markets and economic impacts from domestic and global perspectives; an understanding of time zones and world currencies and their impact on travel; travel industry liability, legal, contractual relationships; industry associations, facilities, infrastructure and resources. The course is accented to local British Columbia development, and provides students with a broad view of the total industry and its opportunities. Prerequisite: none

TOUR 260 Issues in Tourism — Examines the evolution, function and direction of tourism at the macro level. Group discussion, case histories, brainstorming, and lecture formats. Topics covered include historical influences on tourism; basic ingredients of community tourism; satisfying/ acknowledging minority interests; basic British Columbia geography; government, associations and travel industry conflicts; psychology of travel including allo-psycho segmentation, demographics of travel and acculturation; tourism legacies; destination determination; festivals, arts, film industry and recreational influences on tourism; group and incentive travel; training and educational issues for industry and the public. Students may also be invited to participate in Superhost and/or Encore workshops. Prerequisite: TOUR 160

TOUR 310 Passenger Transportation 1 — Introduces the concepts of marketing in a regulated environment. Air travel, including both schedule and charter carriers, plays a major role in the development of tourism and the flow of business and vacation travellers. The impact of deregulation in the USA is a model for the industry in Canada. Route awards, subsidies and promotional activities such as frequent flyer programs. Pricing includes fare structures, yields and prorates. The wave of mergers has altered the competitive environment. Bilateral air agreements dictate the level of international air service. Regulation of third level, feeder and commuter carriers in BC is also included. Prerequisite: TOUR 160, TOUR 260, MKTG 100, MKTG 200.

TOUR 320/420 Organizational Behavior 1 and 2 — Examines personnel issues involved in all aspects of the Tourism Industry. The two major themes are human resource management and organizational behavior. Topics of discussion and practise include human resource recruitment, selection, induction; orientation and training; role of government and unions; management and labor negotiation skills; counselling, discipline and documentation; human resource problem solving and decision making; leadership, motivation and team building; conflict resolution; communication and interpersonal skills; human rights, employment standards, employment equity and sexual harassment issues; stress and time management; health, safety and environment issues. Prerequisite: ADMN 102

TOUR 325 Tourism Product Development — Designed to familiarize the student with tourism product development. Examines general demand factors, travel motivations, market segmentation, travel advertising, sales support, public relations, marketing risks and problems, statistical applications and analysis, tourism research, tour packaging and its various elements, etc. Prerequisite: MKTG 100, MKTG 200, TOUR 160.

TOUR 330 Community Tourism and Planning Attractions — Designed as a "how to" study in generating positive economic and social impacts on British Columbia communities from the growth of tourism business. Case history approach, supplemented with lectures, group discussion and practical, community-related projects will lay a good foundation for grad-

uates to identify and develop economic benefits in a variety of venues and business sectors. The course is oriented toward rural, smaller British Columbia communities. Major topics include: tourism and community ("It's not for everyone"); the nature of attractions; developing a planning strategy; economic and business considerations; environment and recreational factors; social, cultural and communications issues. Prerequisite: TOUR 160, TOUR 260.

TOUR 410 Passenger Transportation 2 — Introduces operational characteristics of surface modes as means of access to tourist areas. Transportation economics and regulations includes passenger rail, sightseeing and tour coaches, harbour ferries, fishing charters, river rafting, car rentals and recreational vehicles, house boating and ski lifts that are examined as part of the tourism product. Impact of the provincial highways system, including ferry services on the B.C. coast and inland lakes. Examines cruise ship facilities and the Alaska route. Prerequisite: TOUR 310.

TOUR 430 Convention, Conference and Group Services — This course examines the detail involved in developing and hosting group business, and program planning requisites. While marketing is covered briefly, major emphasis is on satisfying physical needs of groups, ingredients in program planning, and details unique to group travel business. Subjects covered in lectures, discussion seminars and practical exercises include accommodation and hospitality, transportation planning, audio visual and staffing needs, contracts, stages of program development, communication systems, packaging and pricing for "winwin" conferences, speaker and spousal programs, group activities, attractions for benefitting the broader community. Prerequisite: TOUR 160, TOUR 260, MKTG 100, MKTG 200.

TOUR 444 Destinations: World Geography — Develops an appreciation of world tourism markets, competitive factors and diverse cultural heritages. The course objective is to provide an understanding of the backgrounds of touring publics as they are encountered in local business environs, and insights to share with the outbound travelling public. Begins with British Columbia, then Canada, the United States, and then all continents and island-groups of the world. Particular emphasis is placed on Pacific Rim countries and peoples. Discussion will cover locational and physical geography, historical, cultural, language, social and political distinctions, as well as significant tourism features of nations and regions. Prerequisite: TOUR 160, TOUR 260.

Aircraft Maintenance Engineer

Categories A.R.E.

This is a 16-month program recognized by Transport Canada. Graduates are accredited with 18 months credit toward the three years practical experience required for the AME License.

Program Length:

4 terms of 15 weeks (450 hours per term)

Prerequisite A.R.:

Grade 12 with Algebra 11 and Physics 11. Good color vision is essential. A mechanical background is recommended.

Prerequisite E.:

Grade 12 with Algebra 12 and Physics 11. Good color vision is essential.

Categories A.R: Maintenance

Theoretical and practical training enables students to work on light/medium/heavy, fixed/rotary-wing aircraft, and provides the necessary preparation for employment in the aviation industry — first as an aircraft mechanic learner, later as a mechanic or Aircraft Maintenance Engineer (category A or R license). Completion of the program assures 18 months credit toward the category A or R license.

Program content includes aircraft powerplant, avionics and ground equipment operating principles; methods and parts for maintenance/repair of airframes and power plants; major aircraft/powerplant parts and controls; how to use manuals and technical bulletins to test/maintain aircraft, powerplants and ground equipment.

Instructors

Jack Baryluk, A.M.E.
John Edwards, A.M.E.
Brian Lockwood, A.M.E.
Charles Roberts, A.M.E.
Jack Sargent, A.M.E.
David Upton, A.M.E.

Category E: Avionics

Theoretical and practical training enables students to work on light/medium/heavy, fixed/rotary-wing aircraft and provides the preparation for employment in the aviation industry as a technician or Aircraft Maintenance Engineer (category E license). Completion of this program assures 18 months credit toward the category E license.

Program content includes electrical/electronic power generation and distribution, analog/digital electronics and radio theory; Canadian Aircraft Regulations and Airworthiness Standards; the operating principles and maintenance of aircraft powerplants, avionics and ground equipment; communication, navigation and instrumentation systems and their maintenance; how to use manuals and technical bulletins in the testing/maintenance of aircraft electrical, avionic and ground systems.

Instructors

Patrick Muldoon, A.M.E.
Vincent Murray, A.M.E.

Aircraft Structures

This program trains students in the basics of repairs to aircraft structures. Aircraft Structures graduates have found lifetime careers in the aviation industry; several companies give preference to BCIT students when hiring new learner mechanics.

Program length: 6 months

Prerequisite: Grade 12 with Algebra 11. Good color vision is essential. Some drafting is recommended.

Program Content

Program content includes how to use materials and tools safely; how to repair damaged composite/stressed skin aircraft structures; the major parts of an aircraft; the laws of nature governing flight and the forces acting on aircraft structures; how to interpret simple shop drawings and blueprints; how to use manufacturers manuals to repair aircraft structures; the role of Transport Canada in the aviation industry; the importance of time management in profitability.

Theoretical and practical training will enable students to carry out repairs to composite and stressed skin (sheet metal) aircraft of varying types, and provides the basis for employment in the aircraft industry as a learner structures mechanic.

Please note: the School of Engineering Technologies and Trades through its Part-time Studies department, offers a wide range of part-time courses related to the aviation industry.

— Custom Furniture

Benchwork and Joinery (Cabinetmaker) (ELTT)

A joiner works in a wide range of specialties such as cabinet-making, furniture making, pattern making, store fixture manufacturing and millwork. The type of work done in each of these areas varies. In some shops the joiner will be a machine operator, feeding components in at one end and/or extracting them at the other. In other shops the joiner will be required to read detailed blueprints and visualize the item to be built, lay out and compile a cutting bill, cut and machine all the components, and then assemble the final product.

The joiner must be familiar with all the machinery in the shop and be able to set up, use and maintain this machinery. Any hardware items such as hinges, locks or drawer slides specified in the blueprints must be considered during fabrication. The joiner not only installs these items, but also ensures that the units will accept each particular hardware.

The Program

Training is intended to prepare students for entry-level employment in the joinery trade. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic interior woodworking tasks. Upon successful completion of the program, students should work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

Use safe work practices
Solve mathematical problems
Sketch and read drawings, use and layout procedures
Care and use of hand tools
Care and use of portable power tools
Care and use of shop equipment
Identify and use materials
Lift and support loads
Use specialty tools
Floor and wall framing
Interior and exterior finishing
Cabinets and finishes
Prepare for employment

Length of Program

Approximately 6.5 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0730-1415

Prerequisites

- a. Good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor. (604) 434-3304.
- b. Anyone over 16 who meets the following requirements may apply.
Either:
 1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years.
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services. (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Employment Opportunities

Opportunities are currently found in small shops producing such items as custom cabinets. Most of these shops are in town. Graduates should be prepared to work in production shops at this time, although formal apprenticeships are still common in this trade.

Instructors

Erwin Bublitz, Chief Instructor
Peter Oldham

Bricklayer

The Program

The Bricklayer program prepares students for entry level employment in the bricklaying trade. Basic theory and related information combined with shop practice will develop competence in basic bricklaying.

Program Content

Practical use of basic masonry tools
Masonry units
Mortar
All phases of basic masonry construction
Trade-related international (metric) measurements
Students will be required to build some projects within a set time to given standards

Length of Program

Up to 5 months: minimum 10 weeks, maximum 20 weeks (practical work is self-paced). Program content has been organized into modules to ensure maximum flexibility for individualized training.

Prerequisite

Grade 10 recommended. Applicants must have a good working knowledge of the English language.

Instructor

Jack Andrews, Chief Instructor

Carpenter (ELTT)

Carpentry is divided into two fields: rough carpentry and finish carpentry. The rough carpenter erects the basic structure of a building (foundation, floors, walls and roof); the finishing carpenter installs doors, cabinets, wall panelling, stair railings and wood trim. Some carpenters are skilled in both fields.

Today, with so many new products and techniques, some carpenters specialize in one particular field of the trade. Among the specialties:

- site preparation and layout
- blueprint reading
- installing cabinets and hanging doors
- building stairs and railings
- installing exterior siding

The rough carpenter may also specialize in wood framing or erecting concrete structures such as hi-rise buildings.

The Program

Training is intended to prepare students for entry-level employment in the carpentry trade. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic carpentry tasks. Upon successful completion of the program, students may wish to work toward journeyman status in the trade by seeking employment as an apprentice.

Program Content

Use safe work practices
Solve mathematical problems
Sketch and read drawings
Care and use of hand tools
Care and use of portable power tools
Care and use of shop equipment
Identify and use materials
Lift and support loads
Site preparation and layout
Concrete and formwork
Use specialty tools
Oxyacetylene cutting and welding
Floor and wall framing
Ceiling and roof framing
Exterior finishing
Interior finishing
Cabinets and finishes
Prepare for employment

Length of Program

Approximately 6.5 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0800-1445

Prerequisites

- a. Must be able to work at heights and in adverse weather. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years.
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services. (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Employment Opportunities

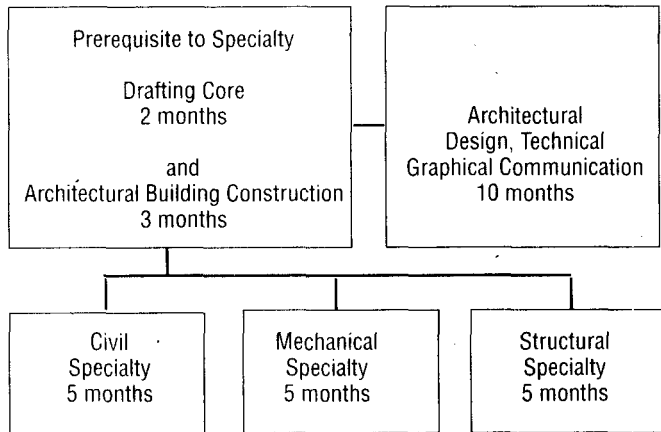

As a result of the downturn in the construction industry, most opportunities at this point are found in the residential building sector. Apprenticeship prospects are not strong at this time. Graduates should be prepared to work as helpers until better opportunities become available. Those who do not serve formal apprenticeships, but gain enough work experience with employers, may be eligible to write the Trades Qualification (T.Q.) examination.

Drafting Trade

Drafting

Prerequisite for Combined Program

Grade 12 with Grade 11 math. Good hand/eye coordination and technical aptitude. Students will normally enter at the core level although credit for prior experience and/or acquired knowledge may be given. *Test required.*

Drafting Core

Prepares the student with the basic knowledge and skills of drafting to enter any drafting specialty and includes introduction to drafting, math and surveying, and CAD training.

Length

Two months

Architectural Building Construction

Prepares the student to choose one of the four specialties available and concentrates on developing basic drafting skills. Includes introduction

to architectural specialty, introduction to building systems and graphic techniques, and continuation of CAD training.

Length

3 months if credit is granted for drafting core. 5 months if combined with drafting core.

Career Potential

Possible employment at the junior drafter level.

Civil Drafting

The Specialty

Prepares the student to combine the necessary understanding of building construction with the requirements of municipal regulations.

Specialty Content

Basics of civil drafting as combined with architectural building construction and highway design, municipal services, surveying; plus a continuation of CAD training

Length of Specialty 5 months

Career Potential

Students may be potential drafters and surveying assistants working for engineering firms, surveyors, municipalities.

Mechanical Drafting

The Specialty

Prepares the student to combine the understanding of building construction with the design and regulatory devices used in detailing building mechanical systems.

Specialty Content

Combines the mechanical processes of buildings (i.e. plumbing, electrical, heating and ventilating, gas) with building construction techniques.

Length of Specialty 5 months

Career Potential

Employment may be found in architectural offices specializing in systems design.

Structural Drafting

The Specialty

This drafting specialty covers specific detailed information on structural building components and the preparation of working drawings, using architectural and structural techniques and requirements as they apply to building construction.

Specialty Content

Combines building construction with the design of reinforced concrete and structural steel.

Length of Specialty

5 months

Career Potential

Students may find employment in engineering offices with special concerns dealing with reinforced concrete and structural steel.

Architectural Design Technical and Graphical Communication

The Specialty

In assessing their suitability for this program, the potential applicant should consider that:

1. In general, programs of professional study are highly focused. Architecture is no exception to this, calling for a high degree of motivation;
2. Architectural studies involve an understanding of people's needs, of technologies, the human ethic and fine arts. The student should, therefore, expect to draw upon a breadth of academic and personal experience;
3. Much of the program calls for judgement and decision-making ability in situations where there are no clean-cut solutions. Students find that, in addition to intellectual and creative ability, they also need initiative, tenacity and a tolerance for uncertainty.

Specialty Content

Graphic communication	Site planning
Architectural principles	Construction systems
The design process	Building elements
Behavioral design	Building types planning
Modern architectural history	Building codes and bylaws
Townscape and urban space	Directed studies projects

Prerequisites

Applicants should have:

1. Completed a study of English (Literature Eng 12 C+ and Composition);
2. Completed a study of Mathematics Algebra 12 C+ (Introductory Calculus), except that the Admissions Committee may instead require a written examination in the subject;
3. Prior training or experience in arts, crafts or design oriented activities. Ability for visual communication is extremely valuable.

All applicants will be required to attend an interview with:

1. Evidence, such as a portfolio of materials, demonstrating the applicant's creative ability in the manipulation of three-dimensional form;
2. A short essay (approximately 550 words) detailing their reasons for choosing Architecture as a career.

Applicants will also be required to complete a Test of Aptitude.

Mature students who lack formal education may be considered if they have clear objectives and display evidence for success.

Career Potential

Employment may be found in architectural firms or related engineering companies.

T. Start, Instructors Diploma, Higher National Diploma (Structures)

Plumber (ELTT)

A plumber works with domestic hot and cold water, drainage waste and vent systems, hot water heating systems, sewage disposal systems and septic tanks. Many plumbers hold gas tickets because of the widespread use of natural gas in B.C.

All plumbing work in Canada is closely regulated. Accordingly, plumbers must become familiar with the National Building Code, the B.C. Plumbing Code and Municipal by-laws and amendments.

The Program

Students are prepared for entry-level employment in the plumbing trade. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic plumbing maintenance tasks. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

- Use safe work practices
- Solve related math problems
- Solve related science problems
- Use piping hand tools
- Use specialized power tools
- Use piping equipment
- Use fasteners and fittings
- Use measuring tools and hand tools
- Describe the piping trades
- Select common piping materials
- Install valves, fittings, hangers, supports and sleeving
- Rigging and scaffold
- Use oxy-acetylene equipment
- Read and sketch basic drawings
- Construct piping systems projects
- Select common plumbing materials
- Install and test low temperature hot water heating systems
- Layout and design piping drawings
- Maintain plumbing systems and components
- Install and test a drainage, waste and venting system
- Install and test a potable water supply system
- Install standard plumbing fixtures
- Prepare for employment

Length of Program

Approximately 6.5 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0730-1415

Prerequisites

- a. Must be able to work at heights and in enclosed spaces. Good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor. (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years.
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years:
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services. (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Employment Opportunities

At this point, opportunities are primarily found in town in the housing and commercial sectors. Graduates of the program should be prepared to start as helpers in the trade as apprenticeships are difficult to find.

Instructors

John Masse, Chief Instructor
David Bowles
James Endert
William Evans

Nick Potis

Steamfitter (ELTT)

A steamfitter/pipefitter installs, alters, maintains and repairs piping systems which convey low and high pressure steam, hot water, air, fuel gases, fuel and finely divided solids. Steamfitters/pipefitters are employed in thermal and hydro power plants, mines, chemical and industrial plants, petroleum refineries, pulp and paper mills, dairies, schools, apartment and office buildings, hospitals, shopping malls, laundries, ships, shipyards and oil drilling platforms.

The Program

Training will prepare students for entry-level employment as steamfitters/pipefitters. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic steamfitting/pipefitting tasks. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

- Use safe work practices
- Solve related math problems
- Solve related science problems
- Use piping hand tools
- Use specialized power tools
- Use piping equipment
- Use fasteners and fittings
- Use measuring tools and hand tools
- Describe the piping trades
- Select common piping materials
- Install valves, fittings, hangers, supports and sleeving
- Rigging and scaffolds
- Use oxygen acetylene equipment
- Read and sketch basic drawings
- Construct piping systems projects
- Install a selected pump
- Install and test low temperature hot water heating systems
- Layout and design piping drawings
- Install a basic steam heating system
- Install manufacturing fittings
- Fabricate fittings
- Prepare for employment

Length of Program

Approximately 6.5 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0730-1415

Prerequisites

- a. Must be able to work at heights and in enclosed spaces. Good physical condition is desirable. Potential students with any medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years.
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services. (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Employment Opportunities

In this trade opportunities are found in industrial plants, pulp and lumber mills, and some commercial areas. Most of these industries are unionized and graduates are encouraged to seek apprenticeships.

Instructors

John Masse, Chief Instructor
Ron Marier
Gary Miller

Upholstery — Auto Trimmer

The Program

This program prepares students for entry-level employment as automotive upholsterers. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic and custom automotive upholstery work.

Program Content

General shop practice
Tools and equipment
Sewing machine operation
Button machine operation
Trim and hardware
Materials
Models and styles of automobiles
Design, layout, cutting, sewing and installation of:
— Door panels
— Seats
— Carpets
— Headliners
— Vinyl tops
— Convertible tops
— Glass

Length of Program

5 months

Prerequisite

Grade 10. Must have a good working knowledge of the English language and a genuine interest in the restoration of automobiles.

Career Potential

Employment opportunities exist with automotive body shops, upholstery shops, auto seat cover centres and industrial upholstery trimming shops which specialize in a particular area of work, such as restoring cars or custom work.

Instructor

Menno Janzen

Upholstery — Custom Furniture

The Program

This program covers the theory and practical skills required by a custom furniture upholsterer. Students are taught how to use hand and power tools, layout, match materials, plus mark and cut to a particular design or style. Students learn the use of sewing machines, cements, glues, buttons and tufting: how to estimate jobs, and good business practice.

Program Content

Level 1

Safety and handling equipment
Estimating and layout — basic
Fabric cutting and lay up — basic
Paddings, terms and usage
Foam pricing and estimating — basic
Fabricating cement and solvents
Stripping upholstery — basic

Level 2

Stripping for templates
Frame repairs and styling
Showwood refinishing
Coil and no-sag springs
Sewing cushions and skirts
Edgings and installations
Basic tufting

Level 3

Designing tufts and flutes
Installation of tufts and flutes
Application of layouts
D.N.R. — railroad cutting
Fabric variations and treatments

Level 4

Technical sewing methods
Detailed sewing — back seats
Types of sewing
Upholstery terms (five major areas)
Stitching methods
Application of pleating methods
Upholstery with vinyls

Level 5

Trimming and finishing — terms and methods
Application of finishings
Estimating
Decorating methods — fabric
Decorating methods — design
Pricing
Business practice
Sales calls

Length of Program

5 months

Prerequisite

Grade 10, or a good working knowledge of the upholstery trade.

Career Potential

Employment opportunities may be found with furniture manufacturers, department stores, furniture refinishing and recovering firms. Many graduates have started their own businesses.

Instructor

Bob Andrews, Chief Instructor

- Structures

Surveying

- Surveying
- Technician's Program
- Photogrammetry

Building

Spiralling advances in technology have increased the public's expectation of their communities and the buildings constructed within them. Structures are expected to be designed and constructed to rigorous standards of workmanship and safety while at the same time incorporating all the features which contribute to speed of erection, financial efficiency and user satisfaction. The construction industry is one of the major employment fields in Canada, turning over a large proportion of the total dollar volume of business in the country. These two factors, high public expectation of the industry and the dynamic nature of the industry, present both a challenge and an opportunity — attractive criteria for any career.

Job Opportunities

Since graduates have the advantage of understanding buildings from several perspectives — the architectural and structural elements; the mechanical, plumbing, drainage and electrical systems; the cost implications and the contractual and managerial processes — they will be able to fill technological positions which lie between the professional architect, engineer and contractor on the one hand, and the skilled tradesman on the other.

With experience, graduates of Building Technology become senior drafting personnel, job captains, specification writers, estimators or contracts managers, building inspectors, officials in property management departments, appraisers and assessors, partners in construction organizations and technical representatives for building supplies and equipment manufacturers. Many graduates will become estimators with general and sub-trade contractors, preparing bids and checking job costs and progress. Instruction is also given in appraisal and assessment, leading to employment with public and private agencies. The growing field of Building Technology presents opportunities in consulting offices, assisting in design, specification writing and construction inspecting; with contractors, doing estimating, shop drawings and supervision; with suppliers, explaining the capabilities and application of equipment and systems.

The Program

The Building Technology program is designed to give both men and women a sound preparation for rewarding careers in many facets of the construction industry.

First year courses are common to all students and in addition to English, math and physics, include various basic technological subjects. Lecture instruction, drafting room practice and field trips are part of the program, and students are often able to further their education through summer jobs with architects, engineers, contractors or by doing inspection work for public and private agencies.

In their second year, students (subject to their demonstrated ability and departmental approval) will be placed in one of two specialized majors: Architectural or Economics. Information on these two electives is available from the Program Head.

The **Architectural Major** is primarily intended for those students who plan to work in architectural design and drafting offices. Subjects such as design, drafting, rendering techniques and graphics are studied to enhance expertise in this area.

The **Economics Major** is primarily intended for those students who plan to work in construction and project management offices. It is concerned with costing and the evaluation of property and construction, either in the drawing stage or already constructed.

Post-graduation

The Architectural Institute of British Columbia offers graduates credit for some of the examinations in their syllabus of studies for articulated students. The Canadian Institute of Quantity Surveyors will accept graduates as Probationer Members, and give credit in a similar manner. The Building Technology program is fully accredited by the Applied Science Technologists and Technicians of B.C. Information on these professional development possibilities is available from the Program Head.

Prerequisites

English 12, Algebra 12 plus Physics 11, all with C are course requirements for this program.

Course Descriptions

ADMN 311 Industrial Management — Designed to give students an understanding of business management and an opportunity to apply principles and techniques through analysis of business case-problems.

BLDG 101 Drafting — Architectural drafting techniques and lettering. Drawing development with specific reference to office procedures and related design activities. Building standards for line development and graphics. Drawing process in terms of systemization and computerization.

BLDG 102 Building Construction 1 — Principles of building construction in terms of the assembly of materials. Examination of typical systems of wood and masonry construction. Study of architectural detailing and the origins and purposes of building and zoning by-laws. Application of the above components to the preparation of working drawings.

BLDG 103 Materials and Methods — Physical and chemical properties of common construction materials. Standards and gradings for materials. Construction methods and building procedures. Field studies and examination of sample products. Filing and retrieval of technical literature.

BLDG 104 Construction Site Processes — Job site management. Planning, implementation and control of site construction processes. Supervision of construction activities. Contractual relationships and documentation. Application of field studies to actual practice layouts.

BLDG 105 Construction Contracts 1 — Fundamentals of contracts. Parties to construction contracts. Basic types of construction contracts. Relationship between information and risk. Standard forms of construction contracts used in Canada and elsewhere. Appropriate documentation and related issues.

BLDG 108 Introduction to Computers — Computers as machines. Computers as management devices. Hardware and software defined. Aspects of programming, operating, and networking. Demonstrations of practical applications in building technology. Hands-on practice and research assignments related to the topic.

BLDG 201 Planning — Fundamentals of functional building design. Planning and organization of residential spaces. Design of simple utilitarian objects. Elementary architectural design problems and presentation techniques. Prerequisite: BLDG 101.

BLDG 202 Building Construction 2 — Continuation of BLDG 102. Prerequisite: BLDG 102.

BLDG 205 Construction Contracts 2 — Continuation of BLDG 105. Detailed examination of contents of current standard forms of Canadian construction contracts. Contractual procedures involving payments and adjustments. Application of principles to actual cases. Study of recent litigation involving construction contracts. Responsibilities for design and advice. Prerequisite: BLDG 105.

BLDG 206 Construction Estimating 1 — Introduction to general theories of measurement and pricing of construction work. Specific study of particular methods of measurement. Application to elementary examples of work. Introduction to bidding procedures and documentation. Sources of cost data. Introduction to computer applications for estimating. Prerequisite: BLDG 103.

BLDG 302 Building Construction 3 for Architectural Major 1 — Continuation of BLDG 202. Examination of typical systems of construction in heavy timber, steel and concrete. Site fabrication and assembly; prefabrication. Selection and location of materials in buildings. Extensive preparation of working drawings. Field trips to building sites and fabrication plants. Prerequisite: BLDG 202.

BLDG 305 Construction Specifications — Fundamentals of language as a means of communication. Style in specifications. Organization and presentation of information in construction contract documentation. Filing and retrieval of construction information using Masterformat. Preparation and reproduction procedures for production of project manuals. Use of word-processing equipment for specifications. Practical applications. Prerequisite: BLDG 103.

BLDG 306 Construction Estimating 2 — Continuation of BLDG 206. More detailed study and application of measurement and pricing of work of specific trades with emphasis on concrete work. Examination of CIQS Methods of Measurement of Construction Work. Prerequisite: BLDG 206.

BLDG 309 Architectural Major 1 — Short history of contemporary architecture and building. Conceptualization and planning. Theory, aesthetics and structure as integral parts of design. Prerequisite: Completion of first year program.

BLDG 312 Construction 3 for Economics 1 — Same as BLDG 302, but with less emphasis on drawing board skills and more emphasis on construction implementation procedures. Prerequisite: BLDG 202.

BLDG 316 Economics Major 1 — Principles of land development, use and title. Appraisal and assessment of property values for purchase, sale, taxation and other purposes. Techniques of analysis and synthesis of construction project costs. Sources of cost information and data. Prerequisite: Completion of first year program.

BLDG 402 Construction 4 for Architectural Major 2 — Continuation of BLDG 302, for Architectural Major. Prerequisite: BLDG 302.

BLDG 406 Construction Estimating 3 — Continuation of BLDG 306. Measurement and unit pricing of specific construction trades. Preparation of estimate summaries and bids or proposals to owners or clients. Construction cost accounting. Documentation used in estimating and cost accounting processes. Bid strategies, bid depositories, bid procedures in general. Prerequisite: BLDG 306.

BLDG 409 Architectural Major 2 — Continuation of BLDG 309. Graphics and freehand drawing of architectural subject matter. Advanced perspective drawing in a variety of media. Architectural model making. Extensive seminar discussions, guest lecturers and field trips. Prerequisite: BLDG 309.

BLDG 412 Construction 4 for Economics 2 — Continuation of BLDG 312, for Economics Major. Prerequisite: BLDG 312.

BLDG 413 Codes and Regulations — Building Law in Canada. A general survey of codes and regulations affecting design and construction, including zoning and professional practice. Specific study of the National Building Code, with particular reference to use and occupancy, and the control of fire hazards. Prerequisite: BLDG 302 or BLDG 312.

BLDG 416 Economics Major 2 — Continuation of BLDG 316. Financial management; contract management. Cost accounting and budget control methods. Bid strategies and procedures. Development of feasibility studies. Presentation of reports on construction economic affairs and jobsite controls. Techniques of costing, pricing and analysis of economic data. Prerequisite: BLDG 316.

BLDG 419 Building Acoustics — Theory and principles of sound, including properties, propagation, sources and measurement techniques. Noise criteria and control of noise in buildings. Selection of materials having appropriate acoustical and aesthetic qualities for buildings. Calculations encountered in acoustical considerations. Prerequisite: BLDG 302 and 309.

CIVL 135 Building Structures 1 — Basic theory of statics including the calculation of loads acting on structures, and the calculation of support reactions and internal axial and shear forces and bending moments due to the applied loads. Students will be expected to analyse simple trusses and plot shear and bending moment diagrams for beams. This course lays the groundwork for subsequent courses in strength of materials and elementary structural design, and is presented in lectures followed by tutorial problem solving sessions.

CIVL 236 Building Structures 2 — The link between statics and design, this course concentrates initially on various types of stress, including shear, bending and buckling stresses. Investigation of properties of sections, shear forces, bending moments, deflections, loads, methods of framing and site visits, allow for analysis of existing buildings and use of the timber design manual. Prerequisite: CIVL 135.

CIVL 337 Building Structures 3 — The emphasis in this course is placed on elementary structural design concepts for timber, steel and reinforced concrete structures. Students are familiarized with design aids such as handbooks, manuals, catalogues and tables used in the construction industry. Architectural students study primarily timber structures, including concrete formwork design. All other students study a more condensed course including timber, steel and concrete. Concepts such as lateral stability and resistance to wind and earthquake forces are included. Prerequisite: CIVL 236.

CIVL 438 Building Structures 4 — Architectural students study elementary reinforced concrete design including an appreciation of its variations, such as prestressed concrete and reinforced masonry, followed by an introduction to soils engineering including compaction, foundation systems and retaining walls. All other students take a shorter course including bolted and welded connections of steel members, a condensed version of the soils engineering mentioned above, and an introduction to concrete formwork design. Prerequisite: CIVL 337.

ELEC 150 Illumination — Deals with the types and characteristics of lighting sources; quantity and quality of light; lighting units, terminology and calculations.

ELEC 250 Electrical Systems — Students learn how to plan the electrical system for a specific building, with the electrical designer. How to read and work with common electrical drawings and specifications, understand single and three-phase systems, and power factor correction for minimal operations costs; recognize and avoid building designs that create costly electrical design problems. Prerequisite: ELEC 150.

MATH 140 Basic Technical Mathematics — Quadratic equation and systems of linear equations. Radian measure. Trigonometric functions, solution of triangles, and vectors. Irregular areas and volumes. Exponential/logarithmic theory and transformations, common and natural logarithms, and logarithmic/semilogarithmic graphs. Variation, straight line equation, and curve fitting. Linear programming.

MATH 240 Calculus 1 and 2 with Analytic Geometry — Conic sections and polar/rectangular transformations. Limits, the derivative, differentiation rules for algebraic, trigonometric, logarithmic and exponential functions, curve sketching, implicit differentiation, higher order derivatives, applied maxima/minima, related rates and differentials. Antidifferentiation, the indefinite integral and the definite integral including area, volume, centroid and moment of inertia.

MATH 440 Mathematical Methods and Computing — BASIC arithmetic and functions, input/output statements, relational operators, branching statements, strings and arrays. Linear programming using the simplex method and the transportation problem. Cost estimating computer case study.

MECH 412 Space Conditioning — The student will study and analyze factors influencing indoor comfort, including building solar orientation, evaluation of cooling loads, properties of air, air conditioning processes, and gain an overview of air conditioning methods.

MSYS 101 Plumbing — Topics include codes, basic engineering principles and graphic presentations related to plumbing systems design, load calculations, piping methods, sizing of system components for storm and sanitary drainage and water distribution. Some drafting skill will be required.

MSYS 202 Heating and Ventilating 1 — Covers the principles involved with heat loss in buildings and practises of heating and ventilating encompassing a study of system components and design procedures. These will then be applied to the preparation of heat loss calculations and working drawings for a heating/ventilating system.

OPMT 185 Project Management — An introduction to the fundamentals of Critical Path Method (CPM) as it applies to project planning, scheduling and control, and project management. The course includes arrow, precedence and time logic diagrams; resource allocation, time cost analysis and the role of the computer.

OPMT 260 Management Engineering 1 — Applies the systematic problem-solving and decision-making approach to construction industry problems. The course includes computerized facilities planning; work study, using recognized method study techniques to examine and improve the way in which a job is accomplished; recognized work measurement techniques for estimating, planning and cost control and engineering economics.

OPMT 360 Management Engineering 2 — Techniques of work innovation and management problem-solving. Goal setting, agreement creation, work measurement and documentation. Uses computer software for project management with emphasis on the manager's perspective.

PHYS 219 Physics — A general physics course designed to meet the specific needs of the Building Technology. There is a lab component. Topics include: mechanics — statics, kinematics, dynamics, work and energy, basic machines; electricity and magnetism — electrostatics, basic circuits, electromagnetic effects; electric motors; matter — solids, liquids and gases, hydrostatics, fluid flow; heat and thermodynamics — change of state, heat transfer, heat engines, energy sources; wave and simple harmonic motion — mechanical and acoustical vibrations.

PHYS 319 Applied Physics — A general physics course designed to meet the specific needs of the Building Technology. There is a lab component. Topics include: mechanics — statics, kinematics, dynamics, work and energy, basic machines; electricity and magnetism — electrostatics, basic circuits, electromagnetic effects; electric motors; matter — solids, liquids and gases, hydrostatics, fluid flow; heat and thermodynamics — change of state, heat transfer, heat engines, energy sources; wave and simple harmonic motion — mechanical and acoustical vibrations.

SURV 120 Introduction to Survey — An introduction to engineering survey; linear distance; the theory and use of theodolite; direction, bearing and angles; use of traverses in site engineering; elevations, use and theory of the level, how to use the plane table.

TCOM 102 Technical Communication — In this course students learn the basic techniques and applications of written and spoken communication. Assignments are related as closely as possible to the practical careers of Building Technology students, including direct and persuasive requests, informational memos, job application letters and resumes.

TCOM 201 Technical Communication — In this applied communication course students learn the theory and practice writing different types of short reports based on industry-related case studies. They learn report formats and write occurrence, trip, progress, investigation and recommendation reports. Prerequisite: TCOM 101.

TCOM 301 Advanced Technical Communication — In this course, students concentrate on two problems of particular relevance to second-year students — obtaining employment and writing presentations. They update their job search packages and write proposals, follow-up letters, progress reports, a formal technical report and give an oral technical briefing. Prerequisite: TCOM 101, TCOM 201.

Faculty and Staff

E. Hull, B.Sc., P.Eng., Associate Dean
F.A.A. Alfeld, Dipl.Eng., Instructor
G. Berkenpas, Senior Instructor, 1st year
R. Guerin, A.Sc.T., Seminar Co-ordinator
D.C. Hale, Dipl.T., Assistant Instructor
G.M. Hardie, M.Ed., F.R.I.C.S., Program Head
H.E. Kuckein, M.A.I.B.C., M.R.A.I.C., Senior Instructor, 2nd year
M. Kuzych, B.Arch., M.R.A.I.C., M.A.I.B.C., Instructor
J. Lancaster, B.Comm., M.C.I.Q.S., Instructor
J.A. McInnes, P.Eng., Instructor
A. Maharajh, B.A., Dipl.T., A.Sc.T., M.C.I.Q.S., Part-time Studies Co-ordinator
D.D. Workman, Instructor

Civil and Structural

Civil and Structural technologists are involved in the design and construction of highways, bridges, airports, railways, municipal works, power developments, dams, canals, docks and harbors. The field has enormous creative potential and offers the technologist involvement in all phases of a project, from design stage to finished job.

Job Opportunities

Graduates find employment as inspectors, construction supervisors, testing lab technicians, design detailers and investigation and construction technologists in government and in private industry. A number of graduates have founded their own consulting or construction businesses. Others are placed in engineering, contracting, surveying or architectural firms as project managers or supervisors, or to work in design or analysis. These jobs usually entail an equal amount of time spent outdoors as indoors. Fieldwork usually takes place from spring to fall.

The Program

The diverse and stimulating program includes field trips to assist students in developing their creativity, ingenuity and critical abilities, as well as major projects in which the student develops, in consultation with professionals, appropriate methods of approach and solution. In the second year, students may choose their options to provide a degree of specialization in varying areas of the civil and structural technology. These include Geotechnical/Highways, Water Resources, Construction and Structures.

The program has been accredited at the technologist level by the Applied Science Technologists and Technicians of B.C. and, upon completion of the BCIT diploma program, graduates are eligible for membership in the Society.

Prerequisites

Algebra 12 and Physics 11 are course requirements for this program. Applicants should be skilled in the use of the English language, have good mathematical ability and be interested in the physical sciences. Drawing or sketching ability is useful.

Exemption from the academic requirements may be made in the case of mature applicants with applicable practical experience.

Transfer

Graduates of the Civil and Structural Program with a sufficiently high standing are granted full credit for their work at BCIT by the University of Lakehead Civil Engineering Department. After taking summer school they are then eligible to enter fourth year engineering directly and graduate with an accredited degree in two years. Students with a high academic standing also obtain good transfer credits to other Canadian Universities such as the University of Waterloo and the University of Calgary.

Course Descriptions

CIVL 101 Statics — Vectors, force systems, graphical analysis, resultants, components, moments, equilibrium laws, force polygons, funicular polygons, frames and trusses, stress diagrams, Bowes' notation, flexible tension members, load shear and bending moment curves. Closely supervised problem sessions are used to provide the student with practice in common analytical and graphical solutions to problems of static load on statically determinate structures.

CIVL 103 Hydrology — This introductory course presents the basic concepts and techniques of small watershed analysis and the type of work involved in the design, supervision and construction of drainage facilities. The course will present the fundamentals of practical hydrology including: the hydrologic cycle; precipitation types and measurement; snowmelt, runoff and streamflow; basic frequency analysis and open channel flow. Lectures, assigned problems, and two design projects will be used to demonstrate the principles involved.

CIVL 109 Concrete Technology — After successfully completing this course, a student will have the knowledge required to select suitable materials for making quality concrete; design a concrete mix for strength, workability and economy; sample and conduct quality control tests on concrete and aggregates and understand the theory and practices used in concrete manufacturing and construction. Topics include cements, water/cement ratio, admixtures, concrete properties manufacturing, transportation, placing, finishing, curing, CSA code A23.1 and 2 Inspection Techniques.

CIVL 202 Stress Analysis — Simple stresses; stress, strain, elasticity; compound bars and columns; temperature stress; elastic limit, limit of proportionality; yield; ultimate; factor of safety; load factor; ductility; resilience; fatigue; shock. Properties of sections; bending moments; shear forces; theory of flexure; slopes and deflection of beams; restrained and continuous beams. Strut theories; eccentric loading, lateral loading. Testing techniques; machines; extensometers; strain gauges; brittle lacquers; photo elasticity; evaluation of results. Prerequisite: CIVL 101.

CIVL 203 Elementary Structural Design — Having previously studied forces and material properties, students learn to apply these to the analysis of real structures. They also study

the effects of wind, snow and earthquake loads as determined by national standards. Design and analysis of steel and timber beams, columns and trusses and their connections are used as examples. Prerequisite: CIVL 202.

CIVL 207 Hydraulics 1 — Through problem sessions and lectures, the student learns to determine the hydrostatic forces exerted by water on a variety of structures, gates, tanks and dams. As part of a project, the student analyzes a complex tank full of water to determine the forces and centres of pressure. Special problems of hydrostatic pressures produced in accelerated or rotated fluids are given. Further problem sessions lead to the understanding of energy transfers and losses in pipe systems and the significance of friction losses in waterworks systems. In this part of the course, the student analyzes a simple pump-driven circulation system and graphs all energy gradients in profile along the system. Evaluation is by individual interview, problems and quizzes.

CIVL 211 Civil Computer Applications — BASIC language commands, statements, line numbers variables, string variables, expressions, input/output logic including algebra employing arrays, built in functions, subroutines, random access and sequential access files, screen graphics. Projects using BASIC; FORTRAN compared to BASIC; mainframe file editing/printing using CMS/VM spreadsheets; word processing data bases. Highway terminology — horizontal/vertical curves. Introduction to Canadian Standards.

CIVL 304 Structural Design General — Designed for students taking Civil options. Through analysis and design projects, students are introduced to reinforced concrete as a structural material. The effects of continuity with structures are discussed in lectures and connection details for all structural components in basic building materials are developed. Prerequisite: CIVL 203.

CIVL 308 Hydraulics 2 — Lectures and assignments on open and closed channel flow including distribution of flow pipe networks, water-hammer, and stresses in pipes. Hydraulic element chart and specific energy in open channel and culvert flow. Prerequisite: CIVL 207.

CIVL 314 Urban Street Design — Through a review of the urban street classification system, the student will determine the basic requirements of a road right-of-way and its relationship to other utilities. In preparing the design of a major road, it will be necessary to understand both vertical and horizontal design elements and the use of cross-sections to correlate these design controls. The concepts of road drainage, intersection design, sidewalks, channelisation and drawing preparation will be discussed. A review of the design process, extent of field information, legal surveys and the preparation of as-constructed drawings will conclude the course.

CIVL 315 Subdivision Planning — Provides the student with an understanding of the planning concepts and restraints for subdivision developments at the municipal/city level. Sections of the Municipal Act and local bylaws are reviewed to establish layout criteria, subdivision procedures and rezoning applications. Consideration will also be given to the engineering requirements and the concerns of external approving agencies. In preparing an actual subdivision plan, the student will be evaluated based on the city, developer and engineers view points, complete with a preliminary cost analysis.

CIVL 322 Structures 1 — Heavy emphasis is placed on statically indeterminate structures in this, the first of three second year structures courses. In addition to determining the design criteria for continuous beams and frames by the use of moment distribution, reinforced concrete designs for one way slabs, continuous beams and columns, as well as retaining walls, are investigated. The designs are "drafted" and "reinforced" with site visits. Prerequisite: CIVL 203.

CIVL 325 Soil Mechanics 1 — Through lectures and laboratory work the principles of basic soil mechanics and soil testing are covered. Topics include mass/volume relationships, soil classification, compaction, geology, subsurface investigation, permeability and pressure diagrams, effective stress, consolidation, shear strength.

CIVL 383 CADD for Civil and Structural — (1) Basic CADD commands for controlling elements, views, drawings and files. (2) Project using above knowledge/skills to produce civil/structural drawing and hard copy thereof. (3) Project to make a modified version of drawing as in (2) with radical changes utilizing power of CADD system. (4) Project to utilize data from above drawing for design and quantities take off. Prerequisite: CIVL 211.

CIVL 410 Asphalt Technology — After successfully completing this introductory course, a student will have the knowledge to select suitable materials for asphaltic concrete design using the Marshall method. Topics include plant and paving quality control, asphaltic cement testing, calculation for asphaltic design.

CIVL 412 Municipal Services — Students plan a residential subdivision for a piece of accessible raw land and design an arterial street bordering the subdivision and specific minor streets and intersections within the subdivision. The instructor acts as supervisor and consultant to students. Lectures on the basics of neighborhood planning and on design standards and methods are given as needed. The plan includes the waterworks distribution system, sanitary sewers and storm sewers and their design with full plans and profile drawings for each service. Through preparatory lectures and discussions, the student is introduced to municipal road standards, crown and drainage, street geometry, street appurtenances, paving methods, domestic fire and industrial water demands, water distribution design methods, distribution reservoirs and pressure control, pumping, sewer flows and sewer design, sewage pumping stations and loads on buried conduits. Field trips are made to municipal operations. Prerequisite: CIVL 207, CIVL 206.

CIVL 416 Water Resources — Lectures and problem sessions present the analysis of surface runoff by the rational formula and unit hydrograph, mass curves for water supply storage, flood routing and detention storage. The use of the computer in predicting water resources and quality (mathematics modelling) is covered. Prerequisite: CIVL 207 or CIVL 105.

CIVL 417 Highway Design — Students will complete the preliminary design of a section of rural highway in B.C. Working in groups, students will establish curve radii, spiral lengths, curve data, stations, curve superelevation, superelevation development, centre line profile, vertical curve lengths, typical section details, drainage details, culvert sizes. Using an earthwork computer program students will optimize earthworks by manipulating input files on vertical alignment, typical section and superelevation and by analysis of resulting mass haul. Preliminary working drawings will also be prepared. Prerequisite: CIVL 206, CIVL 207, CIVL 211.

CIVL 419 Highway Design Basic — Students will prepare preliminary drawings and a design brief for an actual project in British Columbia. Students will choose an alignment within a corridor and design spiralled curves and a preliminary alignment. Curves will be suitably superelevated. Students will select an appropriate typical section. Existing ground and proposed alignment data will be input into a computer earthworks program. Input files will be adjusted interactively with this program in order to achieve an earthworks balance. The resulting mass haul diagram will be analysed. Students will prepare a report or series of short reports at various stages during the course.

CIVL 423 Structures 2 — Through analysis and design projects, students continue to achieve appreciation and understanding of structures. Emphasis is placed on computer aided structural analysis and design, and on formwork design. Students will acquire the ability to present calculations, sketches and drawings in a clear, concise, professional manner, and to solve problems within a specified time limit. A field trip to inspect a structure under construction is included. Prerequisite: CIVL 322.

CIVL 424 Structures 3 — An existing bridge is chosen in consultation with the instructor, and the student designs, aligns and details an alternative crossing to the original. The student learns about layout, moving loads, influence lines, continuous girders, trusses, arches, deflections of spans, bridge deck floor systems, sway bracing, deck slabs, joint details, piers and abutments, and piling. Prerequisite: CIVL 423.

CIVL 426 Soil Mechanics 2 — This course applies the knowledge learnt in CIVL 325 to a variety of geotechnical, foundation and drainage design problems. Projects include seepage studies and stability analysis of soil slopes, earth pressures and retaining structures, foundation design. Prerequisite: CIVL 325.

CIVL 427 Soil Mechanics 3 — Lectures, laboratory and project work and guest lectures cover the following topics: geotechnical aspects of tailings dam design, construction and maintenance; triaxial soil testing; maintenance and operation of laboratory/field electronic equipment; reinforced earth; elementary rock mechanics. Prerequisite: CIVL 426.

CIVL 432 Construction Estimating — The student is involved in construction estimate preparation both as an individual and as a member of a team. Lectures illustrate the procedures for taking off quantities, establishing productivity forecasts and unit costs, and accounting and job control methods.

CIVL 433 Construction Detailing — Introduction to the practical aspects of taking-off, fabrication, and the placing and inspecting of reinforcing steel in concrete structures. Field trips to fabricating plants and construction sites augment classroom instruction.

CIVL 434 Structural Detailing — Students are required to design and detail connections, and draw solutions to detailing problems taken from structures used in other related courses, i.e. timber, steel and reinforced concrete. Includes bill of materials and reinforcing bar lists.

CIVL 436 Construction Planning — Introduction to the time-value of money and the application of sound economic principles to comparison of construction alternatives and acquisition and maintenance of equipment. A major construction project is analyzed by the student emphasizing critical path planning and the optimum use of resources. Planning for construction projects involving repetitive operations is demonstrated by worked examples. Construction industry guests lecture on current projects and the responsibility of the technologist.

MATH 142 Basic Technical Mathematics for Civil and Structural — Quadratic equation and systems of linear equations. Radian measure. Trigonometric functions, solution of triangles, vectors. Irregular areas and volumes. Exponential/logarithmic theory and transformations, common and natural logarithms, logarithmic/semilogarithmic graphs. Variation, straight line equation, curve fitting. Linear programming.

MATH 242 Calculus 1 and 2 for Civil and Structural — Conic sections and polar/rectangular transformations. Limits, the derivative, differentiation rules for algebraic, trigonometric, logarithmic and exponential functions; curve sketching, implicit differentiation, higher order derivatives, applied maxima/minima, related rates and differentials. Antidifferentiation, the indefinite integral and the definite integral including area, volume, centroid and moment of inertia.

MATH 342 Matrix Methods for Civil and Structural — Matrix theory and operations, types of matrices, determinants, matrix inversion, elementary matrix transformations and solution of systems of linear equations. Linear programming using the Simplex method. Network analysis.

MATH 442 Statistics for Civil and Structural — Organization and graphical presentation of data, frequency distributions and measures of central tendency, variation and other measures. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Method of least squares, regression and correlation. Time series analysis. Control chart concepts and application, acceptance sampling.

MECH 101 Drafting Fundamentals — An introductory course for persons with little or no experience in graphics. (Students are required to purchase drafting equipment and supplies on the first night of class). Students learn to produce and read simple drawings. Topics include scales, geometric constructions, basic orthographics detail interpretation, line visibility, dimensioning, auxiliary views, true shape, inclined and skewed surfaces, sections, pictorials, working drawings and freehand sketches.

MECH 202 Drafting Civil and Structural — Intersections, developments, descriptive geometry, contours, sections, profiles, cut and fill problems. All treated generally on a project basis with civil and structural design procedures.

OPMT 180 Construction Management 1 — An introduction to the fundamentals of the Critical Path Method (CPM) as it applies to project planning, scheduling, control and management. This course includes arrow diagrams, precedence diagrams, resource allocation, time-cost analysis, PERT, bid determination, project management and the role of the computer. The course is designed to meet the needs of the civil engineering student.

OPMT 280 Construction Management 2 — The study of problem-solving in industry, with particular emphasis on heavy construction and manufacturing problems. The course includes

method study, process charting, activity sampling, work measurement, motion economy and productivity. Special emphasis is placed on the human problems associated with change. The course is particularly slanted towards civil engineering.

PHOT 127 Photo Interpretation for Civil and Structural — Covers the fundamentals of aerial photo interpretation, basic photo interpretation equipment, geologic and soil mapping, air photo interpretation for terrain evaluation, engineering applications of aerial photo interpretation including site evaluation and route location. The fundamentals of photogrammetry and the applications of photogrammetric equipment to highway engineering are also covered.

PHYS 107 Physics for Civil and Structural — This is a general level physics course emphasizing the application of physical principles to the Civil and Structural Technology. A section on the application of geophysical exploration techniques used in the technology is included. Topics covered include statics, kinematics, dynamics, energy and power, angular motion, thermal properties of matter, fluid mechanics, wave motion and waves in elastic media, basic electricity and magnetism, instrumentation, optics and atomic and nuclear phenomena. The lab program stresses measurements, data analysis and experimental techniques.

PHYS 207 Physics for Civil and Structural — see PHYS 107.

SURV 130 Surveying for Civil and Structural — Fundamental concepts of surveying; measurement of distances, use of compasses, theodolites, plane tables, levels and chains, site surveys. Calculations relating to traverses, triangulations, areas and volumes; obtaining, recording and plotting topographic detail. Care, maintenance and adjustment of equipment.

SURV 230 Surveying for Civil and Structural — see SURV 130.

SURV 330 Surveying for Civil and Structural — see SURV 130.

SURV 430 Surveying for Civil and Structural — see SURV 130.

TCOM 101 Technical Communication for Civil and Structural — This course covers basic writing and speaking skills needed for communicating technical information in industry. Students learn how to organize messages, illustrate documents, define and describe mechanisms and processes, and write memos, letters and instructions. Students also prepare and deliver oral presentations.

TCOM 203 Technical Communication for Civil and Structural — Students will write job application letters and resumes and learn about job interviews. They write short progress, incident, trip reports and inspection reports common to the Civil and Structural field. They also practice oral reporting. Prerequisite: TCOM 101

TCOM 302 Advanced Technical Communication for Civil and Structural — Students analyze and write problem-solving, analytical and recommendation reports typical of the civil engineering field. They also learn small group communication theory, write management letters, organize staff and site meetings and participate in role-plays. Prerequisite: TCOM 101, TCOM 203.

TCOM 401 Advanced Technical Communication for Civil and Structural — In this course, students continue practising advanced communication skills such as using word processing to write specifications, how to handle complaints on the telephone, persuasive presentations and technical proposals. The focus of the course is on selling engineering ideas. Prerequisite: TCOM 101, TCOM 203, TCOM 302.

Surveying

The skills of the survey technologist are in demand in a large number of businesses and industries. Surveying and photogrammetry are essential to many phases of industrial and business development including construction, natural resource exploration and development, and mapping. Surveying techniques have become more sophisticated through the use of electronic devices and computers so that shape, size and location of objects or land masses can be determined with precision and speed.

Job Opportunities

Surveying firms, consulting engineers, the oil and gas industry, government mapping, highway, planning and engineering departments and utility companies provide some of the job possibilities for surveying graduates. Employment may be found throughout Canada and around the world. This program is accredited by the Applied Science Technologists and Technicians of B.C.

The Program

BCIT offers both two year and specialized one year programs. In conjunction with Part-time Studies, the Survey department presents a training program to the Technician level. The major surveying program is the two year course of studies leading to a National Diploma in Surveying. Students in this program acquire a solid background in math, physics, cartography, photogrammetry, plane and geodetic surveying and computers. The practical skills of note keeping, drafting, field operations and calculations are also covered. Prospective students should have a genuine interest in mathematics, computers and earth sciences, and should enjoy a vigorous outdoor lifestyle. Students desiring a less academic program may take advantage of the more field-oriented Junior Technician level program. Students who select this program will normally complete Term One of the General Survey program and then transfer into a specialized course of studies in applied survey techniques.

Students whose interests are centred in the areas of photography, computers and cartography, should consider the Photogrammetric Operators program. This program is a two term course of studies specializing in production photogrammetry. Employment in surveying during the summer break is considered desirable.

Post-graduation

Following completion of the two year diploma program, students are eligible for membership in the Applied Science Technologists and Technicians of BC. Graduates are granted some course credits at the University of Calgary, in the Surveying Engineering Department, and at the University of New Brunswick; and examinations set by the Western Canadian Board of Examiners for Land Surveyors' Association or Corporation of the four Western Canadian provinces.

Prerequisites

Algebra 12 and Physics 11 are course requirements for this program. Applicants should have a good understanding of math and physics to the university level. Good health is also important because of the physical demands of survey work. Photogrammetry Option students must have good stereo vision.

Course Descriptions

MATH 151 Basic Technical Mathematics — Quadratic equation and systems of linear equations. Trigonometric functions of any angle, solution of triangles, graphs of trigonometric functions, identities, and trigonometric equations. Celestial mechanics and angular measures. Definitions and theorems from solid geometry, solutions of spherical triangles and problems in navigation. The straight line, conic sections and transformation of coordinates.

MATH 251 Calculus — Limits, the derivative, differentiation rules for algebraic, trigonometric, inverse trigonometric, logarithmic and exponential functions; curve sketching, related rates, differentials and radius of curvature. Partial differentiation, Taylor and Maclaurin series and Puissant's theorem.

Least squares theory. Antidifferentiation, the indefinite integral and the definite integral including area, volume and ARC length. Integration by parts, partial fractions and substitution techniques.

MATH 351 Matrix Methods — Matrix theory and its application in surveying focussing on the elements of matrix operations used in least squares adjustments. Included are vectors and coordinate transformations, matrix calculus, eigenvalues and eigenvectors, quadratic forms and ellipses.

MATH 451 Statistics — Organization and graphical presentation of data, frequency distributions and measures of central tendency, variation and other measures. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Sampling, estimation, propagation of error, pre-analysis, regression and correlation, and the use of variance/covariance matrix.

MECH 101 Drafting Fundamentals — An introductory course for persons with little or no experience in graphics. (Students are required to purchase drafting equipment and supplies on the first night of class). Students learn to produce and read simple drawings. Topics include scales, geometric constructions, basic orthographics detail interpretation, line visibility, dimensioning, auxiliary views, true shape, inclined and skewed surfaces, sections, pictorials, working drawings and freehand sketches.

MECH 203 Drafting — Techniques in ink; intersections and developments; contours; profiles; rights-of-way; survey problems and projects.

PHOT 267 Photogrammetry 2 — Introduction to aerial photographs and other remote sensing acquired data; use of map and air photo; geometry of the air photo (scale, displacement and parallax); optics for photogrammetry (refraction, reflection, prisms and lenses); stereoscopy and stereoscopes; radial line triangulation and planimetric map compilation; aerial cameras.

PHOT 365 Cartography: Photogrammetry — Drafting principles as applied to photogrammetric compilation and cartography; inking and scribing techniques; surround detail, lettering and scales; production procedures.

PHOT 367 Photogrammetry 3 — The compilation of a flight plan and detailed specifications for a photogrammetric project. Photographic measurements and refinements using a comparator and other instruments. The elements of exterior orientation expressing the space position and angular orientation of a tilted photograph. Use of direct optical projection stereoplotters. Stereoplotters with mechanical or optical mechanical projection systems and automated stereo plotting instruments. Application of on and off-line projection systems and automatic contouring during orthophoto production. The location of points by intersection from two or more terrestrial photographs.

PHOT 377 Photogrammetry — The geometry and physical nature of the photograph. Optics for photogrammetry. Principles of photography. Dark room procedures. Aerial cameras. Stereoscopy. The spatial model. Comparator measurements of photocordinates. Planning aerial photography. Plotting instruments. Classification and operation of stereoplotters. Aerial triangulation. Photogrammetric control extension, coordinate transformation. Use of electronic computers. Photo-interpretation. Terrestrial and oblique photogrammetry. Map compilation. Cartography. Remote sensing. Photogrammetric refinement. General specifications.

PHOT 465 Cartography: Photogrammetry — Drafting principles as applied to photogrammetric compilation and cartography; inking and scribing techniques; surround detail, lettering and scales; production procedures.

PHOT 467 Photogrammetry 4 — Review of geometric projections, inner, relative and absolute orientation. Three dimensional similarity transformation, projective transformation, collinearity transformation, projective transformation, collinearity and coplanarity equations. Restitution instruments — analogue and analytical types. Accuracy of photogrammetric measurement. Aerial triangulation. Photogrammetric products — topographic maps. Orthophoto maps and digital elevation models (DEM).

PHOT 477 Photogrammetry — Coordinate transformations. Collinearity and coplanarity equations. Accuracy of coordinate determination. Aerial triangulation — preparation, measuring and adjustment. Applications of photogrammetry to survey and mapping projects. Introduction to digital mapping.

PHYS 123 Physics — General topics covered include light and optical instruments, kinematics, statics, dynamics, angular motion, energy, work properties of matter, temperature, thermal properties of matter, wave motion, basic electricity and magnetism and electronic distance measuring. The lab program stresses measurement, data analysis, experimental investigation of physical laws and technical report writing. Mathematical treatment requires only algebra and trigonometry. Applications of the general topics are relevant to the Surveying Technology.

PHYS 223 Physics — see PHYS 123.

SURV 161 Plane Survey Computations 1 — Mathematical basics; geometry and theorems pertaining to circles; plane trigonometry; angles and bearings; definitions and conversions of angles to bearings and vice versa; coordinate systems; polar and rectangular; inverting; computations of traverses; traverse adjustment by compass and transit rules; locations of gross linear and angular gross errors; area computations by coordinate and DMD methods; UTM traverse computations; missing parts; see SURV 261.

SURV 164 Field Surveying 1 — An introduction to the types and history of surveying. The course also covers fundamental principles: accuracy and precision, linear measuring, trigonometric and differential levelling, plane table, angular measurement, compasses, theodolites.

SURV 172 Computer Applications 1 — This course is designed to familiarize the student with the operation of the hand held computer from two perspectives: first, as a calculator to do random computations; second, as a programming tool to solve routine survey problems. Material covered: modes of operation, operator hierarchy, numeric functions, numeric and string variables, array variables, basic statements and commands, program structure, elementary programming and program editing.

SURV 260 Computational Methods for the Field Technician — Review of important geometry theorems and their application to survey. Computations of simple circular curves and symmetric vertical curves. The solution of problems related to the subdivision of land. The reduction of field acquired measurements.

SURV 261 Plane Survey Computations 2 — Missing parts: different techniques of computation problems on subdivision of land; prismoidal and trapezoidal rules of area computations;

geometry and elements of circular and compound curves; various methods of curve layout; vertical curve; calculations of areas of cross-sections and earthworks volumes; slope staking; control surveys: intersection and resection; inaccessible base.

SURV 264 Field Survey 2 — An extension of SURV 164 Field Survey 1. Students use techniques developed in large field project where further instrumentation in the form of tachometers and electronic distance measuring equipment is used.

SURV 265 Survey Drafting — Completion of this course will give students the ability to apply drafting fundamentals to the solution of survey problems. Students will acquire skills in plotting cadastral survey data, drafting plans, profiles and cross-sections; developing simple earth-work diagrams.

SURV 268 Field Survey Techniques — This is an intensified field oriented course. Successful completion will give students the ability to carry out routine survey tasks. These will include extensive practice in the use of surveyor's levels, theodolites and various types of EDMs.

SURV 272 Computer Applications 2 — A continuation of SURV 172. Topics include BASIC programming for strings, For-next, loops, subroutines, data files, introduction to MS-DOS, introduction to word processing, serial communication for hand held computers.

SURV 361 Plane Survey Computations 3 — Geometric spaces in surveying, surveying measurements, propagation of errors, computers and numerical approaches in surveying; computations of control surveys; triangulation, trilateration, traversing, reduction of eccentric measurements, intersection, resection, inaccessible base; transformation of coordinates, partitioning of land, horizontal and vertical curves; integrated surveying; deformations; three dimensional surveying systems.

SURV 362 Geodetic Surveying 1 — Properties of the ellipse and the ellipsoid of revolution; calculation of radii of curvature; spherical excess; Legendre's theorem, method of addends. Field tests; triangle closures, side equations, sine consistency checks; reduction to sea level. Convergence of meridians, computation of geodetic position, foreward and inverse. Trigonometric leveling; reciprocal, non-reciprocal, refraction, intervisibility problems.

SURV 363 Adjustments of Survey Measurements — Definitions and classification of errors, measures of precision; propagation law of standard errors; weights and propagation of weights; principle of least squares (in matrix notation); adjustment by variation of parameters; conditional observations; combined adjustments; adjustments of triangulation, trilateration nets, and traversing.

SURV 364 Field Survey 3 — This course introduces the student to the instruments and methods used in carrying out plane and geodetic surveys. The projects are aimed at engineering, hydrographic, mining, legal and precise surveys. The student is introduced to the reduction and presentation of the field data, with the application of computers in some areas.

SURV 365 Drafting and Survey CAD — Topics covered include sequential files, string manipulation, microcomputer graphics, role of CAD in surveying, BASIC and FORTRAN programming for plotters and digitizers, data collector transfers, reduction of field data, coordinate geometry programs, creation of plot files. Surveyor general requirements for survey plans, inking.

SURV 367 Earth Sciences — A study of the forest flora of British Columbia. The characteristics of native trees, their identifying features and common uses. Elementary geology, including the study of rocks and minerals, geologic structures, general location and uses of common ores. Soil classification and location.

SURV 368 Descriptions and Survey Law — This course covers basic Survey Law, land tenure and land registration systems. Land survey systems are examined and the format of descriptions for deeds is outlined: the use of metes and bounds descriptions, adjoiners, aliquot parts and centre line descriptions are developed.

SURV 372 Computer Applications 3 — Students will study the FORTRAN language and achieve a moderate proficiency in writing programs for survey computations and graphics. Topics include features of the IBM mainframe, CMS terminal operating systems, XEDIT (Editing Utility), use of the WATIV compiler, fundamentals of the FORTRAN language, FORTRAN 77 compiler, CALCOMP calls, file handling and transfers, IBM PC, FORTRAN compilers.

SURV 374 Field Surveying — Control surveys by triangulation, trilateration and traversing. Indirect optical distance measurement. Electro-magnetic distance measurements. The gyro-theodolite. Trigonometrical and barometric levelling.

SURV 461 Plane Survey Computations 4 — see SURV 361.

SURV 462 Geodetic Surveying 2 — Gravitational and centrifugal force; gravity, gravity measurements and reductions, anomalies, separation of the geoid; precise levelling, orthometric and dynamic heights. Close satellite theory, spherical and rectangular coordinate systems, Doppler positioning by satellite, electronics in surveying, propagation of electromagnetic waves, refraction. B.C. system of integrated surveys, computations in the UTM system, zone to zone transformations.

SURV 463 Mathematical Cartography — Concepts and properties of maps; classifications of maps; theory of distortions; conformality; equivalency; Tissot's indicatrix, conical projections; cylindrical projections; perspective projections; polyconic projection of British Columbia; UTM projection; stereographic projection of New Brunswick.

SURV 464 Field Survey 4 — This course is a survey 'camp' during the final four weeks of term four. The academic requirements for this term will have been covered by this time and the practical or field requirements will be met during the survey 'camp'.

SURV 465 Survey CAD 2 — Topics covered include data structures, programming for digitizers and plotters, introduction to computer graphics, and algorithms for computer cartography.

SURV 468 Cadastral Surveying — Deals with surveys which do not have to account for curvature of the earth. Analysis of methods and instrumental errors, use of specialized equipment. Application of survey methods to engineering surveys, mining surveys, hydrographic surveys and legal surveys.

SURV 469 Planning and Land Utilization — The planning process as it applies to regional and community planning. The role of various planning authorities and their powers. Legislation affecting planning. Zoning and its implications for land use and land development. Land use studies, the subdivision of land and elementary economics related to land development.

SURV 474 Field Surveying — see SURV 374.

TCOM 101 Introduction to Technical Communication — In this course, students learn the style and organization of clear technical writing. They write letters and memos, process descriptions and instructions, and design graphics relevant to surveying. They also give an oral report.

TCOM 121 Technical Communication — Under development.

TCOM 212 Technical Communication — In this course, students learn the fundamentals of job seeking, meeting and reporting. They participate in meetings and give an oral technical report. They write resumes, job application letters, technical briefs and proposals; occurrence, trip progress, evaluation and recommendation reports. Prerequisite: TCOM 101.

COMPUTER SYSTEMS

Decision Systems Engineering/Communications Systems Expert Systems Information Systems Microcomputer Systems

The advent of the computer, and its combination with data communications, has made it possible to store, manipulate, retrieve, analyze and display vast quantities of information in unlimited combinations of text, images and sound. This new technology of information is increasingly widely used in science, engineering, medicine, geology, business, the arts, music, etc., as a creative and analytical tool. Common application areas are: artificial intelligence, forecasting and simulation, engineering and scientific data management and calculation, decision support, communications, accounting, billing, sales analysis, transaction processing (order entry, airlines reservations, banking systems), and a myriad of planning and control functions associated with many business activities. Computer types ranging from large mainframe computers through medium sized minicomputers to desktop personal computers are now commonly used tools of commerce, industry and government, and are increasingly connected with communications networks spanning vast distances. In order for the computer to do its job, a systems analyst must define the problem to be solved, design a solution, and give the computer a detailed set of instructions (called a program) to solve the problem. The job functions just described are quite often combined into one job — the "Analyst/Programmer". Thus it is the human element which determines the degree of success in any computer application.

Job Opportunities

Many graduates begin their careers as junior programmers or junior analyst/programmers and after some experience move into jobs as programmers, systems analysts, programmer/analysts or operating systems programmers; some advance into management in these fields. Other career opportunities exist in such areas as: software and hardware sales, technical writing, training others on computers, consulting, software development or technical support. Still others seek an entrepreneurial role in the computer world as independent business owners, software authors, consultants, and systems and equipment suppliers.

The entire Computer Systems curriculum is under review. Course content is subject to change. New course information may be obtained from the Computer Systems Technology Office or from Counselling.

The Program

The first year of the program is comprised of a mix of computer-related and general business courses. The computer-related courses use mainframe, mini and microcomputers to introduce the standard techniques of programming using PASCAL, ASSEMBLER, BASIC and COBOL languages; the use of software packages covering wordprocessing, spreadsheets and databases, and systems analysis and design. The general

business courses include accounting, economics, mathematics and statistics, communications and computer law. In the second year, students specialize in one of the following options:

Decision Systems: Students specialize in quantitative approaches to managerial decision making. Some of the topics covered are computer simulation, linear/dynamic programming, computer graphics and decision support systems.

Engineering/Communications Systems: This option offers specialized courses in CAD/CAM, computer graphics and data communications as well as traditional training in computer programming and systems analysis.

Expert Systems: This is the branch of Artificial Intelligence which develops automated systems to capture the skills of human experts. Students design and implement prototype expert systems on micro and mainframe computers. Students learn LISP, PROLOG, and a variety of expert system shell packages.

Information Systems: In addition to business systems and programming, students receive additional instruction in MIS and management skills.

Microcomputer Systems: Students specialize in microcomputer technology, digital logic and hardware, microcomputer systems programming, micro-based systems design and micro applications software. Most options are limited in size to about 20 students. Where the number of applications exceeds the option size, students will be selected using a weighted average of selected first year marks.

Prerequisites 1: First Year Entry

At least 6 grade 11 or 12 academic courses (arts and sciences), including English 12 and Algebra 11. Second year options: We specifically recommend Algebra 12 for Decision Systems, and Physics 11 or 12 and Algebra 12 for Engineering Systems.

In the case of mature students, academic transcripts may be supplemented by relevant business experience, successful recent completion of relevant BCIT Part-time Studies courses with 75%, or successful recent completion of relevant courses at other post secondary institutions with 75%. Candidates may be asked to write an aptitude test to aid in the selection process.

Prerequisites 2: Second Year Direct Entry

Qualified applicants are also accepted for direct entry into the second year of the diploma program. Successful applicants usually have a university degree or a diploma of technology from a recognized post secondary institution, or a number of courses from the BCIT Part-time Studies Program equivalent to the first year course load, or an equivalent combination of post secondary training and work experience. Direct entry students may be required to take additional courses in order to make up deficiencies in their backgrounds. Such courses may be scheduled in consultation with the heads of the respective options.

Additional Information

All applicants should enjoy solving problems, using a logical and systematic approach. Because students spend many hours at computer terminal keyboards, applicants will find that the ability to touch type is useful.

Note: The School of Engineering Technologies and Trades, through its Department of Part-time Studies and Industry Services, offers a wide range of part-time courses and programs in the above technology.

- Engineering Systems students take ADMN 111 if they have previously taken COMP 251.

Course Descriptions

ADMN 101 Economic Issues — Exposes students to the application of various economic principles to the study of particular problems. Topics vary depending upon the instructor and the technology receiving the courses.

ADMN 111 Management Fundamentals — An insight into the basic nature of business problems and the administrative process involved in handling them, with emphasis on the personnel management function. Study and discussion is undertaken of actual business situations illustrating problems frequently met in industry requiring managerial analysis, decision and action.

ADMN 220 Organizational Behavior — The study of factors that either influence or are influenced by people at work. The course will focus on macro factors such as organizational structure, technology and environment; group factors such as conflict and decision making; and micro or individual factors such as attitudes, perception and motivation.

ADMN 483 Computers and the Law — Acquaints students with the legal system of Canada and British Columbia, with an emphasis on understanding how to deal with the kinds of legal problems that one is likely to encounter in the computer field.

BCOM 103 Business Communication for Computer Systems — Teaches basic communication theory and the principles of effective business writing. Practice is given in writing informational and persuasive memos and letters. Students also make an informative oral presentation and complete a job application unit. Assignments are specific to the computer field.

BCOM 203 Business Communication for Computer Systems — Continues the studies begun in BCOM 103. Students write a variety of informational analytical reports. They make persuasive oral presentations and learn how to interview for information. Assignments are specific to the computer field. Prerequisite: BCOM 103.

COMP 150 Application Programming ASSEMBLER — An introduction to the principles of programming using IBM ASSEMBLER language. Emphasis is on understanding the mode of operation of a program, practice in the flow-charting, coding, debugging and documenting of simple business applications. Topics include data storage, use of registers, binary arithmetic, loading and searching tables.

COMP 170 Systems Analysis and Design 1 — An introduction to common business applications such as accounts receivable, accounts payable and inventory. The course will focus on the analysis, design and development of information systems. It also introduces the student to an integrated software package using microcomputers.

COMP 172 Systems and Programming Methodology — This course complements COMP 150 and 170 and is a prelude to all future systems and programming courses. It introduces the modern principles of programming methodologies. The philosophies (as advocated by pioneers like E. Dijkstra, N. Wirth, etc.) are used as guidelines to produce software that is understandable, well-structured and easy to maintain. **Pascal** (or **Modula-2**) will be used as the major language for illustration. The concept that **program = algorithm + data structure** is used as the basis of course development. Various popular data structures are examined and the various techniques of developing algorithms are covered. Top-down approach and the concept of modularization are emphasized.

COMP 250 Application Programming BASIC, COBOL — BASIC is used to develop interactive programming and processing techniques. COBOL is introduced to reinforce the structured, modular programming techniques developed in COMP 150 and 172. COBOL programs are written to provide experience in solving practical business problems. Topics include subroutines, table handling, disk file updating and data validation.

COMP 251 Microcomputer Systems and Applications 1 — A study of microprocessors and microcomputer systems. Stresses the wide range of microcomputer applications as well as the differences and similarities to mini/mainframe systems. Topics include: overview of LSI and VLSI technology, microcomputer system architecture, hardware and software characteristics, application considerations. Also includes selected topics in computer fundamentals as related to microcomputers such as machine concepts, Boolean logic and digital design principles. Students complete a project involving microcomputer hardware, software or related topic.

COMP 270 Systems Analysis and Design 2 — A continuation of the material covered in COMP 170 covering areas such as: systems development life cycle, getting a project started, preliminary investigation, systems requirements, fact finding techniques, data flow concepts and diagrams, data dictionaries, cost/benefit analysis, design of input/output and controls, on-line system design considerations, system testing and implementation, hardware and software selection. Human factors and ethical issues are stressed.

COMP 280 Introduction to Decision Systems — An overview of the use of computers to assist management in short and long run decision making for planning and control. Topics include decision theory, inventory models, simulation and linear programming, as well as the behavioral aspects of implementation of computer models.

COMP 350 Application Programming COBOL, ASSEMBLER — Continuation of COMP 250. Completion of ASSEMBLER language programming including the linkage of separately written program sections. Completion of COBOL language. Students write several programs incorporating a variety of programming techniques.

COMP 351 Microcomputer Systems and Applications 2 — Hardware topics include digital logic, MPU and MPU support chip sets, interfacing techniques and current real life microcomputer systems and peripherals. Software topics include several MPU instruction sets, microcomputer operating systems, and common microcomputer programming languages such as **PASCAL**, **C**, advanced **BASIC**, and various **ASSEMBLY** languages.

COMP 352 Software Support Systems 1 — This course covers technical topics in hardware and software related to operating systems and other software support systems. Topics include hardware and software architecture, operating systems, resource management (memory processor, I/O device, data, etc.) utility functions and programming language issues.

COMP 355 CAD/CAM 1 — Lectures, demonstrations and practical hands-on exercises are used to present topics on: CAD/CAM hardware, CADD software, 2D drawing production and management.

COMP 356 Applications Programming FORTRAN, C, APL — Continuation of COMP 150/250. Upon successful completion of this course, the student will be able to design and code advanced FORTRAN programs using structured style and top down design, use subprograms, C programming, know the fundamentals of programming in APL.

COMP 357 LISP and Expert Systems — A major goal of this course is to have students become proficient in the language LISP so they can use it as an Expert System development tool in COMP 457. Once the basic syntax and features of the language have been covered, the course will focus strongly on LISP application areas, in particular those suitable for Expert Systems work.

COMP 370 Technical Aspects of Systems Design — Topics include tape and disk storage characteristics with an in depth study of file organization methods: Sequential, Indexed, VSAM and Direct. In addition, issues in the development of on-line systems are investigated with a major data base systems project.

COMP 381 Decision Systems 1 — The development of computer and non-computer models which assist management in decision making in an uncertain environment. Topics include decision theory, inventory models, queuing theory, simulations of discrete and continuous systems, and risk analysis. Behavioral as well as quantitative aspects are emphasized. Feasibility studies, reports and presentations are required throughout. Students develop programs in FORTRAN and C.

COMP 392 Computer Projects 1 — These courses allow students to work on projects of their choice within guidelines specified by faculty. The projects will be drawn from a variety of sources, wherever possible from industrial situations, and may require extensive contact with the business community; they will cover a large number of diverse applications. Students will work in teams and will seek direction from a faculty member assigned as their project supervisor. Some of the projects will continue through both terms, others will end in COMP 392 and new ones start in COMP 492.

COMP 450 Application Programming PL/I, CICS, 4th Generation Languages — This course includes accelerated PL/I, the chief programmer team approach and on-line programming using CICS. In addition students will use FOCUS to set up and report from a data base. Considerable time will be spent on a large multi-program system designed in COMP 470.

COMP 451 Microcomputer Systems and Applications 3 — An advanced course in Microcomputer Systems. Topics covered will include Systems Software (assemblers, compilers, operating systems, editors); Applications Software (spreadsheet, data base, communications, word processing, etc.); microcomputer networks; microcomputer management and control. Students will conceive, design and implement a systems software project (e.g. language interpreter, cross assembler, communications package, etc.). The impact of microcomputer technology within organizations and its relation to traditional data processing will also be emphasized.

COMP 452 Software Support Systems 2 — see COMP 352.

COMP 453 Selected MIS Topics — An overview of current topics of interest to the Management Information Systems practitioner. Professional journals and articles are used to explore such themes as: trends and controversies in MIS; ethical issues; career paths and professionalism; future directions for MIS. Students read, interpret and lead discussions on relevant material.

COMP 455 CAD/CAM 2 — Lectures and demonstrations are used to present topics on CAD/CAM hardware, CAD filing systems, CAD software algorithms, 2D and 3D applications, practical applications of CAD/CAM, robotics and computer aided manufacturing.

COMP 457 PROLOG and Expert Systems — This course stresses Expert Systems project development techniques. The language PROLOG is taught as the course progresses, and students use LISP, PROLOG, or Expert Systems shell packages to do major projects towards the end of the course.

COMP 470 Advanced Systems Analysis and Design — Structured systems analysis; relational data base concepts; design of on-line systems; data communications and networking. Includes analysis, design and specifications of a major project which will be programmed in COMP 450. Also includes a series of special computer related topics of current interest.

COMP 481 Decision Systems 2 — Systems which assist management in planning and control of projects, the allocation of scarce resources and other short and long range planning and operational decisions. As in COMP 381, behavioral as well as quantitative aspects of the systems are examined and feasibility studies, reports and presentations are required. Topics include PERT and CPM scheduling methods, linear programming theory and application with emphasis on problem formulation, sensitivity analysis and implementation of findings; non-linear, integer and dynamic programming; comparison of optimization, simulation and heuristic methods; choosing the appropriate technique. The course uses "package" programs where applicable.

COMP 492 Computer Projects 2 — see COMP 392.

FMGT 101 Accounting 1 — Permits persons with little or no accounting background to become familiar with the techniques of working through the full accounting cycle. It provides theoretical and practical training in basic accounting as preparation for FMGT 201. Topics include accounting as an information system; introduction to accounting theory; income measurement; traditional record-keeping procedures; the accounting cycle; special journals; cash; investments and receivables.

FMGT 201 Accounting 2 — The follow-up to FMGT 101, topics include inventory, long-lived assets, liabilities, forms of business organizations, cash-flow and working capital analysis, manufacturing accounting, management accounting, consolidated statements, analysis of financial statements and price level changes. Prerequisite: FMGT 101.

FMGT 305 Cost Accounting — Direct costing and the contribution approach; cost-volume-profit analysis; cost analysis for managerial planning and decisions; inventory planning, control and valuation; budgeting and profit planning; standard costs; cost and price variance analysis; capital budgeting. Applications on HP 3000 will be studied during late term labs. Prerequisite: FMGT 201 or 215.

FMGT 309 Financial Management 1 — Basic accounting procedures, closing the books, adjustments, working papers, merchandise operations, statement and ledger organization, special journals, forms of business organization, accounting principles, introduction to cost accounting, analysis of financial data, working capital, departmental and branch operations, consolidations.

MKTG 102 Introduction to Marketing — Includes a detailed study of the basic marketing functions, marketing research, product planning, selection of trade channels, merchandising, advertising, sales promotion and salesmanship. Marketing of consumer goods as well as industrial goods will also be covered.

OPMT 113 Applied Math — First portion of course involves positional numbering systems, binary arithmetic and an introduction to Boolean Algebra as it relates to operation of digital computers. The second phase covers mathematics of finance including simple interest, compound interest, annuities and project evaluation methods both before and after taxes. Typical business and personal applications are illustrated.

OPMT 133 Statistics in Industry — Fundamentals of descriptive statistics and an introduction to inferential statistics. Inferential statistics include probability theory; sampling and sampling distributions; estimation; hypothesis testing; linear regression and correlation analysis using a computer package (SPSS).

OPMT 168 Management Engineering 1 — The use of systematic problem solving techniques to apply cost saving measures to a data processing environment. The use of terms of reference to clarify goals for system improvements. Recording and analysis techniques such as work measurement, activity sampling, flow process charting and multiple activity charting in the information processing workplace. The application of critical examination to selected work situations. Quantified evaluation of alternatives to arrive at a best solution. Tactics for implementing and maintaining the change.

OPMT 268 Management Engineering 2 — Project control through the use of arrow and precedence diagrams. Time logic to level resource use. Microprocessor software packages for project control. Financial analysis of an investment proposal to prepare a request for expenditure, risks as a decision parameter, sensitivity analysis, decision trees and Monte Carlo techniques to analyze risks. Forecasting and projections using spreadsheet software. Applications of multi-dimensional corporate modelling. Overview of robotics and the implications for computer students. Students research a topic or a company within the computer industry and make an effective oral presentation.

PETR 403 Process Dynamics — Introduces a practical and effective 'real time' process control situation. The student is required to produce interim progress reports during the course and a final, formal technical report at the end of the course. Topics include: system dynamics, response time, control strategies, system optimization, system modelling, flow charting, transducer and control valve evaluation.

Faculty and Staff

J.M. Wilson, B.Sc.(Hons.), M.Sc., Associate Dean

R. Abel, B.A. (Hons.), C.G.A.

P. Coolidge, Dipl. T., Co-ordinator, Service Courses

D.L. Gervin, B.A., B.Ed., Dipl.T., C.D.P.

K.E. Holden, R.I.A.

H. Holst, C.D.P., C.S.P., Program Head, Information Systems Option

G.T. Kidd, B.Sc.

M.W. Lo, B.Sc.(Hons.), M.Sc., Program Head, Microcomputer Systems Option

R.B. Long, C.G.A., Manager, Information Technology Programs (P.T.S.)

F.J. Martin, B.A. (Hons.), M.Sc., F.L.M.I., C.D.P., Program Head, Expert Systems Option.

V.A. Nagel, Dipl. T., C.D.P.

J.L. Parry, B. Math.

M. Ramkay, B.Sc.

M. Scriabin, M.B.A., Ph.D., Head, Laboratory for Applied Research in Computer Systems

C.P. Simmons, C.G.A.

K. Takagaki, B.A. (Hons.), R.I.A., C.D.P.

M.E. Turner, M.B.A., P.Eng., Ph.D., Program Head, Decision Systems Option

A.Y.W. Wong, B.A.Sc., M.Eng., P.Eng., Program Head, Engineering/Communications Systems Option

ELECTRICAL TRADES

Appliance Repair Electrician Electronics

Appliance Repair

The Program

Appliance repair training includes the service and repair of domestic electric and microwave ranges, dishwashers, washing machines, electric clothes dryers, food waste disposers, water heaters, freezers, refrigerators and air conditioners.

Program Content

Trade tools and procedures
Basic electrical and mechanical theory
Cooking appliances
Laundry appliances
Freezers, refrigerators and room air conditioners
Dishwashers and food waste disposers
Water heaters
Solid state control of appliances
Test and measurement
Public relations
Portable appliance repair

Length of Program

10 months (40 weeks)

Prerequisite

Grade 10. Must have a good working knowledge of the English language.

Career Potential

Employment opportunities may be found with department stores, major appliance stores and appliance servicing shops which deal with electro-mechanical processes.

Instructors

Gary Arneja
Lou Beaubien
Alan Dawson, (Chief Instructor)

Electrician (ELTT)

Traditionally, the electrical trade was split into two groups called the construction trade and the industrial trade. Consequently, there were construction electricians and industrial electricians. Recently, this distinction has been changed by combining the two groups under the one heading of "electrical worker". The electrical worker lays out, assembles, installs, repairs, maintains, and corrects electrical equipment; tests fixtures, apparatus, control equipment, and wiring systems for alarm, communication, light, heat or power in buildings or other structures. Plans proposed installations from blueprints, sketches, or specifications. Installations consist of panelboards, switch-boxes, pull boxes and other electrical devices.

The Program

Students are prepared for entry-level employment in the electrical trade. Basic theory and related information along with hands-on shop practice will develop competence to perform basic electrical tasks. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

Apply safe and acceptable work habits
Solve mathematical problems
Apply science concepts
Read and interpret drawings and specifications
Process technical information
Use hand tools
Use power tools
Lift loads and erect scaffolds and ladders
Apply the principles of magnetism
Prepare for employment
Apply electrical energy and power concepts
Apply principles of electricity circuit characteristics
Use electrical test equipment
Apply the Canadian Electrical Code
Select and install circuit devices
Connect AC motors and simple controls
Select conductors, boxes, raceways and fittings
Install cables, conductors and fittings

Length of Program

6 months*. Continuous intake. Combination of classroom and self-paced learning.

* Please note: Program length may vary up to 20% plus or minus for students who are faster or slower than the average. However, students will not be allowed to proceed at a rate that would extend the length of their program more than 20%.

Normal Course Hours: 0800-1500

Prerequisites

- Good manual and mechanical ability; good health and physical condition. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor. (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years.
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C or passing
grade on the entrance test
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test in mathematics and reading skills. To pass, you must achieve approximately a Grade 8 score.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services. (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Job opportunities exist in the electrical construction field relating to residential, commercial and industrial installations. Resource industries and manufacturing firms also offer electrical working positions. Most firms prefer applicants with some pre-electrical training.

Instructors

Vince Foley, B.Ed., A.Sc.T.
Mike Horcoff, P.Eng.
Alan Miles, B.Ed.
Stephen Sallaway
Herbert Schweigert, A.Sc.T.
Jim Simpson
Roy Ternes
Otmar Wetzlmayr

Electronics

The Program

Electronics training will provide the graduate with the skills to construct, install, maintain, analyze and troubleshoot electronic equipment and circuits. Students will learn the use of tools and test equipment; repair, adjust and test communication systems; troubleshoot and interface microcomputer systems, and participate in more advanced analog and digital systems training.

Program Content

Level A

Fundamentals of electronics AC/DC theory
Safety in electronics
Tools for electronics
AC/DC theory circuits and network analysis
Measurement and instruments
Electro-magnetism and application

Level B

Semiconductor devices and theory
Characteristics of semiconductors
Power supplies
Oscillations
Amplification
Integrated circuits
Operational amplifiers
Communication circuits

Level C

Digital techniques and systems
Digital circuitry maintenance
Microprocessor and computer maintenance
Process technical information

Length of Program

39 weeks consisting of three 13-week levels, plus 5 days of testing and evaluation (40 weeks total).

Prerequisites

- Level A — Grade 12 with Algebra 12 and Physics 11;
- Level B — Completion of Level A* or pass assessment for Level A;
- Level C — Completion of Level B* or pass assessment for Level B. Poor color vision may restrict employment in some electronic fields.

- * Students with training, or a combination of work experience/training may write a gating exam for advance placement. (Effective September 1, 1986 Algebra 12 and Physics 11 will be mandatory.)

Career Potential

This program trains graduates to undertake the installation, troubleshooting and repair of a variety of electronic equipment, including microprocessors, in the manufacturing and service departments of industrial and commercial establishments. Graduates are also suitable to work in the electronics sales field.

Instructors

Herb Adams, P.Eng.
Miro Angeles, P.Eng., B.A.Sc., M.Ed.
Russ Brendzy
Neil Simmonds, Chief Instructor
Canede Wong, Dtl.Eng.

Apprentices

Fred Bailey
Peter Dell, A.Sc.T.

ELECTRONICS

Control Microelectronics Power Process Automation and Instrumentation Telecommunications

Electrical energy, industrial automation and control, telecommunications and microchips form the base of modern high technology. These disciplines and related systems and equipment are essential to the factory, the industrial process, the office, the small business, the hospital and the home. There is a need for persons trained in the principles and applications of electronics to take their places in the technical team. The positions held by these persons are found in design, development, production, installation, sales and maintenance. The positions may be with commercial companies, government agencies, or educational institutions. The technologist graduate of the Electronics program is an essential member of the team.

The Electronics Technology program is accredited by the Applied Science Technologists and Technicians of British Columbia.

Electronics Technology offers students the flexibility of an equal-term, multiple-intake system, with course-by-course registration, and the option of enrolling in two terms of academic study per year, starting each September and January. All terms run concurrently, thus a student can start a program in September or in January. It takes four terms of academic study to reach graduation, thus a student who starts a program in September of one year can graduate 21 months later. A student who enrolls in the Coop program would take longer. Although students are encouraged to take six courses per term, as listed below, course-by-course registration makes it possible for students with special needs to carry a reduced course load; they would of course then take longer to reach graduation.

Cooperative Education is an integral part of the Electronics Technology program. Students who successfully complete a minimum of two and a maximum of three work periods receive a Cooperative Education Endorsement on their Diplomas of Technology. The paid work periods with an employer in the Electronics industry are each of three or four months, and are interleaved between terms of academic study. The industrial experience gained in the Coop component of the program makes a student more immediately valuable to prospective employers.

The Programs

Five options are offered in the Technology: Control; Microelectronics; Power; Process Automation and Instrumentation; and Telecommunications.

The first two terms of the technology program are common to all five options. Terms 3 and 4 for all five options are practically oriented, being primarily related to specific industrial practices.

Throughout Terms 3 and 4, students spend a good portion of their time in laboratories and workshops carrying out practical, applied assignments.

Transfer credits from the Electronics Technology program to British Columbia universities are possible on an individual basis.

The Control Option, which might well be called the Computer Control Option, presents a broad-based electronics program of study designed to provide the student with the background necessary for entry into a wide variety of areas in the electronics career field. Emphasis is on digital electronics, industrial electronics and digital computers, since the techniques involved are common to all modern electronic systems.

The Microelectronics Option deals with the miniaturization and integration of electronic circuitry and the application of computer tools used in the design (CAD) and engineering (CAE) of electronic circuitry. The curriculum includes hands-on usage of commercial CAD/CAE systems. Students will employ simulation techniques as an aid in the design of complex digital and analog circuitry. Basic training will be given in the layout of both hybrid and monolithic integrated circuits using modern CAD methods. Logic design, based on gate arrays, and microcomputer architecture with lab activities based on Motorola's 32 bit 68000 microprocessor chip form part of the option curriculum. To emphasize the practical industrial situation, projects requiring design, circuit assembly and circuit testing are assigned and completed by the students.

The Power Option. Students enter the option in the 4th term after having completed the 3rd term of the Control option. This final term is concentrated in five main areas: programmable controllers (PLC's), electrical equipment, utility power systems, industrial power systems and industrial electronics. From the basic three phase power and machine theory learned in Term 3, students advance to the theory and practice of power system analysis and protective relaying. From the electronics theory learned in Term 3, students advance to switching power supplies, thyristor AC and DC power control and on to variable frequency supplies. Students will apply feedback theory in the design of voltage and motor speed control systems. Topics in "Industrial Systems" are integrated with a CAD course to emphasize the role engineering drawing has in these fields. The Power Option is offered in the January to May term only.

The Process Automation and Instrumentation Option is concerned with the application of automation and control systems to industrial processes. It is a multidisciplinary program combining analog and digital electronics, computer systems and software development, applied physics (mechanics, fluid mechanics and thermodynamics), and feedback techniques. Emphasis is placed on the application of modern measurement and control strategies to a wide range of manufacturing and processing industries. Offered January-May and September-January.

The Telecommunications Option emphasizes the application of electronics to the telecommunications industry, from simple broadcast receivers to high-density microwave radio systems. Also included are radio navigational systems, satellite communication systems and the use of new generation computers in the telecommunications industry.

Prerequisites

Algebra 12 and Physics 11 both with C+; Chemistry 11 with C

TECHNOLOGY: Electronics

Term 1

Course Descriptions

CHEM 302 Electronic Sensors for Analytic Measurements

— Teaches the student the principles and applications of electronics and circuitry for the process analysis of liquids and gases. Topics include electro-chemical principles and terminology, selection of transducers, electrolytic conductivity, specification probes, specific ion electrodes, flame ionization detectors, chromatographs and spectrophotometers. Lab exercises consist of design, construction and calibration of transducers such as coulometric electrodes and ionization detectors as well as construction of characteristic signal linearization and amplification circuitry. Prerequisite: ELEX 203.

CHSC 343 Thermodynamic and Fluid Mechanics — Before suitable measurement and automatic process control strategies can be designed and implemented, a detailed knowledge of the behavior of that process is required. CHSC 343 fills that requirement by introducing the student to the static and dynamic properties of common industrial processes. Topics include transportation of fluids and fluid dynamics as well as an introduction to thermodynamics including heat transfer and energy balance equations. Prerequisite: MATH 243, PHYS 206.

ELEX 100 Circuit Analysis 1 — Teaches the principles and methods of analysis related to DC circuits. Topics include SI units and terminology, voltage, current, work, energy, power and resistance. Methods of analysis include mesh, superposition, Nodal, Thevenin and Norton. Transients in RC and RL circuits are analysed. Labs are synchronized with lectures so that

theory is studied and confirmed by application.

ELEX 101 Electronic Manufacturing Process — Through the design and manufacture of specific electronic projects, students learn the skills required to do basic soldering, printed circuit repair and rework, high reliability soldering, design and fabrication of single and double-sided printed circuit boards. Upon successful completion, the student will be able to demonstrate a good understanding of the components used in the manufacture of electronic equipment, chassis and metal cabinet design, electronic drafting conventions, tools and techniques used in electronic fabrication, printed circuit design and manufacturing methods, tools used for P.C.B. repair, high reliability soldering requirements, repair of heat and mechanically damaged P.C. boards, as well as techniques required in the design and manufacture of single and double-sided printed circuit boards.

ELEX 102 Digital Techniques 1 — Begins with a description of the fundamental theory of the decimal and binary number systems followed by the binary (two states/levels) concept and the description of binary variables as related to mechanical switches. Various digital logic circuits are discussed and their truth tables and Boolean output equations are generated. Various logic sources are defined and interfaced to combinational logic circuits comprising electronic logic gates. A TTL data book will be utilized to facilitate combinatorial logic circuit design. Boolean identities and Karnaugh Mapping will be used to minimize algebraic expressions. Combinational digital log will be designed and constructed implementing NAND and NOR Gates using Demorgan's equivalent logic symbols (duality of gates). Encoders and decoders will be introduced if time permits. Upon successful completion of this course, the student will be able to correctly use the standard logic symbols and apply proper gating techniques to the analysis and construction of basic logic circuits from word problems or in the laboratory.

ELEX 200 Circuit Analysis 2 — Introduces the behavior of electrical circuits and networks when driven by a single-phase alternating current (AC) source — preparation for courses in electronics and power systems. The course includes the sine wave, average and effective values, power and power factor; resistance, capacitance and inductance as elements in single-phase AC circuits; phasor diagrams, impedance, admittance, voltage, current and power diagrams; analysis of AC circuits with complex algebra; resonance and resonant circuits, high and low pass filters; the application of circuit laws and theorems to single-phase AC circuits, coupled circuits. The circuit theory is verified using multimeters, sine wave generators, amplifiers and dual trace oscilloscopes.

ELEX 201 PASCAL — Introduces microcomputer use, DOS operating system, programming languages, compilers and interpreters. The IBM personal computer is used throughout for interactive student training. The main part of the course covers PASCAL programs for engineering applications. Students will also learn to document and 'debug' software, and to utilize available software libraries.

ELEX 202 Digital Techniques 2 — Studies the utilization of logic circuits and TTL family specifications including noise margins, loading and propagation delays. Interfacing of digital circuits, encoding and decoding of numbering systems and digital arithmetic, sequential logic, flip flops, counters and shift registers. Also includes frequency counters, digital multiplexing and memories.

ELEX 203 Electronic Circuits 1 — Explains how electronic circuits work, how to analyse and how to design, modify and combine them to perform complex functions. Topics include interpretation of bipolar and field-effect transistor characteristic curves; voltage and current amplifying circuits; the transistor as a switch; loadline analysis; choice of Q-point; bias circuits; equivalent circuits; frequency response, feedback, oscillation response; oscillator circuits; power amplifiers of various types; heat sink calculations and characteristics and application of switching devices. Prerequisite: MATH 143, PHYS 106, ELEX 200 (may be taken concurrently)

ELEX 302 Digital Systems — Applies knowledge gained in Elex 102/202 to study digital Mux, display Mux, A/D and D/A concepts, bus techniques, memory IC's and memory decoding schemes. A detailed introduction to microcomputer architecture is undertaken using the Z80 as an example. The student is also introduced to machine/assembly language programming, an operating system, as well as utilities such as an assembler, text editor, linker, software debugger, etc. Z80 timing, control, buffering, interfacing, interrupts and support chips are studied in detail using a small single board Z80 system. Prerequisite: ELEX 200, 201, 202, 203, 303, or 333 (ELEX 303 or 333 may be taken concurrently).

ELEX 303 Electronic Circuits 2 — A continuation of ELEX 203. Begins with the differential amplifier and its small-signal analysis and performance. This material forms an introduction to linear integrated circuits, particularly the operational amplifier and some of its circuit applications including an introduction to active filters. Prerequisite: ELEX 200, 203 and MATH 243

ELEX 307 Pulse Circuits — Introduces pulse signal circuits such as clippers and clamps, transistor switches, astable and monostable multivibrators, Schmitt triggers, ramp generators, DC to DC converters and phase lock loops. Both discrete transistors (bipolar and FET) and CMOS integrated circuits are used in building these circuits. Each circuit is analyzed in detail and its practical application is considered. Prerequisite: ELEX 200, ELEX 202, ELEX 203, and MATH 243.

ELEX 309 Professional Practice — The Canadian legal system: business organizations; tort liability; proof; contracts; offers and acceptance; intent; consideration; capacity; legality; fraud; misrepresentation, duress and undue influence; mistakes; contract interpretation; discharge of contract; breach of contract; client—professional agreement; concurrent liability; honesty; construction contracts; arbitration; mechanics lien legislation; Combines Investigation Act; engineering legislation and statutes; industrial property, patents, trademarks, copyright, industrial design, trade secrets, federal and provincial laws relating to labor. Engineering technology organizations in Canada and their operation: development; legal status; professional designations; codes of ethics; discipline; errors and omissions.

ELEX 311 CAD Systems — Introduces computer programs used in engineering. The DOS operating system's advanced features and utilities are covered. A spreadsheet for costing and accounting and printed circuit board layout program are introduced. AutoCAD is used for drafting and the student will produce a project with it. PASCAL is also used to solve engineering problems. Prerequisite: ELEX 101, 201, 302 (ELEX 302 may be taken concurrently).

ELEX 325 Electrical Equipment — Begins as a continuation of circuit analysis then studies motors, generators, transformers and rectifiers. Topics include a review of phasor diagrams, power factors, three phase power and circuit analysis, single

and three phase power and circuit analysis, single and three-phase power distribution systems, DC motors and generators, induction motors, synchronous motors and generators, motor control circuits, transformers (single and three-phase), and three-phase rectification. Prerequisite: ELEX 200, MATH 243 and PHYS 106.

ELEX 331 Telecommunications Circuits and Systems 1 — Introduces the principles of telecommunications and defines the telecommunication system. Various modulation systems are explained including amplitude modulation, single-sideband, and frequency and phase modulation. A typical transmitter and receiver are examined first in block form then the various component circuits are examined in more detail. Frequency synthesis is also covered. Prerequisite: ELEX 203, MATH 243, and ELEX 200 or ELEX 208.

ELEX 332 Antennas and Transmission Lines — Examines the methods and devices used for the transmission of radio frequency energy. Topics include the characteristics and limitations of open-wire and coaxial lines; design of matching networks; waveguides; dipole antennas; loop antennas; antenna arrays; microwave antennas; propagation using ground waves, sky-waves and space waves. Prerequisite: ELEX 331 (ELEX 331 can be taken concurrently).

ELEX 333 Electronic Circuits 2 (Telecom) — Provides further knowledge of electronic circuits with emphasis on their application in telecommunications. Topics include small-signal tuned amplifiers; control of gain; tuned power amplifiers; stability of tuned amplifiers; wideband amplifiers; operational amplifiers; active filters; parameter systems and their use in small-signal analysis. Prerequisite: ELEX 203, MATH 243 and MATH 200 or 208.

ELEX 334 Telecommunication Principles — Introduces students in the Control option to the organization and operating principles of transmitters, receivers and basic antenna systems. Topics include frequency generation and RF amplification; the superheterodyne principle; modulation, including AM, FM and SSB; typical transmitters and receivers, their adjustment and performance evaluation; antenna and transmission line principles. Prerequisite: ELEX 200 or 208, ELEX 203 and MATH 243.

ELEX 341 Data Acquisition and Signal Conditioning — Examines the application and design of precision analog circuits to interface and signal conditioning systems. Topics include the specification, design and evaluation of amplifier systems commonly used in transducer interfacing applications; high accuracy and stability signal conditioning design techniques and analog signal transmission and multiplexing systems with emphasis on the 2-wire current loop. A strong practical approach is ensured by lab exercises and projects. Prerequisite: ELEX 203.

ELEX 342 Sensors for Measurement and Control — Examines techniques used in industrial control systems for the measurement of flow, pressure, level, density and temperature. Flow measuring devices such as orifice plates, turbine flowmeters, magnetic flowmeters and ultrasonic flowmeters are investigated. Various pressure sensors are examined and their application to level, density and flow measurements are demonstrated. Industrial applications of thermo-resistive and thermo-electric temperature sensors are examined. Labs consist of the configuration, calibration and testing of various industrial measurement devices. Prerequisite: PHYS 206.

ELEX 343 Process Control Devices and Techniques — Examines the principles and practices used in the design and application of common industrial process control components and systems. Topics include automatic process control principles using open and closed loop systems; basic feedback design principles used with electronic, pneumatic and hydraulic devices used as transmitters, signal converters, positioners and power amplifiers; control valve specification and sizing is also included. Lab exercises will analyse the design and performance of manufacturers' control equipment applied to steam and liquid processes. Prerequisite: ELEX 203, MATH 243 and *ELEX 342 (*co-requisite).

ELEX 352 CAD/CAE for Microelectronics — Offers an introductory treatment of logic simulation techniques, schematic capture and CMOS integrated circuit layout. This laboratory oriented course trains students in the use of current electronic CAD/CAE systems. In the first third of the course, the principles of logic simulation are covered and computer simulation exercises (IBM PC's) acquaint students with the use of TTL libraries, ROM's, ALU's and PLA's. Next, students learn to use Mentor Graphics workstations to create schematics and simulate circuits. The final third of the course is an introduction to CMOS mask level design using interactive graphics and a descriptive language. The fundamentals of MOS operation and manufacture are presented. Students develop small full-custom and standard-cell layouts up to the point where the data base could be used to manufacture parts. Prerequisite: ELEX 202, 302 (ELEX 302 may be taken concurrently).

ELEX 353 Hybrid Microelectronics — An introductory course covering the design, fabrication, and application of hybrid (thick film) microcircuits. Begins with an overview of the thick film production process, the properties and characteristics of thick film materials, and the resulting thick film design guidelines. Students are introduced to IC-GRAPH and IBM PC software tools for the interactive layout of microelectronic production process masks. Active RC filters are an application area that can take advantage of the precision resistor capabilities of custom thick film circuits. Students are introduced to procedures for generating the modern filter expressions (Butterworth, Chebyshev, Optimum, Bessel, etc.) and active RC circuits that are capable of synthesizing these filters. Lowpass, highpass, band-pass and band reject filters are investigated. Signal Flow Graphs are introduced as a circuits analytic tool and the computer software tool ACNAP is employed for predicting proposed design theoretical performance. Students perform a complete thick film active filter design project. Corequisite: ELEX 303, MATH 343.

ELEX 406 Data Communication — Introduces the techniques used to communicate digital data from one point to another. Topics include transmission media, channel characteristics and interface standards (RS 232C, RS 449, current loop). Techniques for modulation (FSK, PSK, QPSK) and data coding (NRZ, RZ, Manchester) are presented. Error detection and correction is covered. Other topics include bandwidth bit rate limitations, character oriented (HDLC) and bit oriented (Bisync) protocols, as well as networking schemes. Prerequisite: ELEX 302, ELEX 303 or ELEX 333, and ELEX 307.

ELEX 411 CAD for Electronics — Introduces computer software used in electronics: schematic drawing and digital logic simulation program; software utilities such as DEBUG explore computer and disk operation and software used with programmable devices (PAL, PLE, PLA, etc.) Prerequisite: ELEX 311, ELEX 412 (ELEX 412 may be taken concurrently).

ELEX 412 Computer Systems — Applies knowledge gained in ELEX 102/202/302 to the study of microprocessor systems. Topics include: microprocessor system troubleshooting techniques; memory systems; extended memory; buffering; dynamic memories; relocatable and modular software; EPROM burning; support chips; display and keyboard interface; direct memory access; disk drives and controllers. These topics introduce the student to the hardware and software concepts and strategies that are essential for development and maintenance of computer systems. Prerequisite: ELEX 307 and ELEX 302.

ELEX 413 Industrial Computer Applications — Applies knowledge gained in ELEX 412 to study examples of industrial application of microprocessor systems. Several microprocessors and microcontrollers are evaluated. Applications studied include data acquisition, alarm and binary control, analog control, inter CPU networking and real time systems. Processors are compared for their suitability in each of the applications. Prerequisite: ELEX 406, 412, 414 (ELEX 406 and 414 may be taken concurrently).

ELEX 414 Applied Electronic Circuits — Applies electronic circuit concepts to industrial applications. Introduces practical industrial applications of video for acquisition and display of data. The fundamentals of video raster scan and vector displays are reviewed and video cameras are used in image measurement and digital image storage. Image generation on a video monitor is discussed and simple digital circuits are used to generate pictures. The light pen, image storage in RAM, alphanumeric ROM character generators and CRT controllers are all introduced in lectures and lab projects. Assembly language programming is used with a small Z80 computer to create graphic displays. Other topics include position control and data sampling, collection and handling. Prerequisite: ELEX 302, 303, 307, 412 (ELEX 412 may be taken concurrently).

ELEX 415 Industrial Electronics and PLC's — Teaches students to construct and test common industrial transistor and thyristor power control circuits. They will be able to calculate appropriate values for circuit components used in linear and switching power supplies and to predict and calculate circuit conditions throughout switching power supply circuits, to draw and explain schematics for typical variable frequency thyristor and transistor power supply configurations; to explain how feedback is used to stabilize and improve the performance of electronic power control systems. Students will gain hands-on experience programming industrial programmable controllers. Prerequisite: ELEX 325, 307, 303.

ELEX 419 Technical Project — In their final term, students are required to research, design, prototype and evaluate a technical project within their fields of interest. Formal documentation in the form of a written report is required upon completion of the project. In addition, an oral report may also be required. Prerequisite: ELEX 315, 334, 411, 412 (ELEX 406, 413, 414, 415 and TCOM 204 may be taken concurrently).

ELEX 421 Industrial Systems — Teaches the design of electrical systems for industrial plants and commercial buildings. Topics include lighting systems, feeder calculations and ratings, motor branch feeders, motor control centres, switchboards, unit substations, demand factors, voltage levels, grounding, ground fault and system protection and co-ordination together with all appropriate sections of the Canadian Electrical Code this course is taken in conjunction with a computer aided drafting (CAD) course. Prerequisite: ELEX 325 and 311.

ELEX 424 Power Systems — Commences with an overview of present and future energy sources and then moves on to the circuit analysis of electrical power transmission systems. Topics include: hydro, thermal, nuclear, solar, wind and tidal power; synchronizing and load sharing of generators and systems; transmission and distribution line parameters; the per unit method of circuit calculation; transmission and distribution line voltage regulation; determination of available short circuit currents; protective relaying. Prerequisite: ELEX 325.

ELEX 425 Electrical Equipment and PLC's — A continuation of ELEX 305. A major portion of the course provides hands-on experience with programmable controllers. It commences with a review and expansion of topics on fuses and circuit breakers and the nature of short circuit faults. Other topics include a more detailed study of AC motors and their applications, motor starting equipment, electrical protective devices such as instrument transformers, protective relays and lightning arresters. Prerequisite: ELEX 325.

ELEX 431 Telecommunication Circuits and Systems 2 — There are three major topics in this course: complete transmitting and receiving systems, with emphasis on mobile communications including system performance; frequency control; AGC systems; squelch and muting; noise and emphasis; tone-controlled signalling; antenna coupling systems; digital and microprocessor system control. Video systems: including the video signal (B/W and color); NTSC, SECAM and PAL systems; video transmitting and receiving systems; and an introduction to video recording. Radar and radio-navigation systems including Loran-C, RDF, and VHF Omni-range. Prerequisite: ELEX 302, ELEX 331, ELEX 332, ELEX 333, and ELEX 437 (ELEX 437 can be taken concurrently).

ELEX 436 Switching Networks and Fiber Optics — Introduces the current North American telecommunications network. Topics include evolution of the telephone system; transmission and switching; transmission media; frequency division multiplexing; time division multiplexing, pulse code modulation; electronic switching systems, space division and time division types; associated signalling, power and traffic considerations; cellular telephone systems; fiber optic systems, types of fibers and their propagation characteristics; light sources and detectors and system design consideration. Prerequisite: ELEX 302, 331 and 406 (ELEX 406 can be taken concurrently).

ELEX 437 Microwave Principles and Systems — Introduces microwave principles and hardware, and their application in telecommunication, radar, etc., using microwave energy. Topics include sources of microwave energy, attenuating devices, frequency and power measuring devices, modulators, amplifiers, coupling devices and isolators; a study of high-capacity microwave communication links, and an analysis of satellite communication links. Prerequisite: ELEX 332 and 431 (ELEX 431 can be taken concurrently).

ELEX 438 Radio Frequency Circuit Design — Teaches how to design HF and VHF circuits. Topics include: impedance matching networks; wideband transformers; synthesis of low-pass, highpass, bandpass and bandstop Butterworth and Chebychev filters; introduction to microstrip circuits; high frequency modelling of transistors; small-signal amplifier design using Y and S parameters; stability analysis; design of oscillators and RF power amplifiers; use of feedback in design of wideband amplifiers; mixers; noise performance of amplifiers. Labs require students to design, build and test various circuits applying theoretical knowledge. Prerequisite: ELEX 331, 332, and 333.

ELEX 439 Technical Project — In their final term, students are required to research, design, prototype and evaluate a technical project within their field of interest. Formal documentation in the form of a written report is required upon completion of the project. In addition, an oral report may also be required.

ELEX 441 Microprocessors for Measurement and Control — Investigates application of the microprocessor to industrial process control systems. Topics include the design of hardware and software systems to implement basic binary control functions as well as more advanced two position and PID types. This course will also include a discussion of analog controller circuits. The lab component will provide practical experience in microprocessor circuit design, interfacing of analog and digital I/O and software design. Prerequisite: ELEX 312 and 341.

ELEX 442 Analysers for Process Automation — Covers a variety of analytical measurement applications. Techniques to measure humidity, dew point (psychrometers, hygrometers, vapor equilibrium and chilled mirror devices), gas composition (chemical absorption, thermal conductivity, heat of combustion, zirconium oxide analysers and gas chromatography), conductivity and pH are investigated. In the lab exercises, students will operate, calibrate and analyse typical industrial measuring devices. Prerequisite: ELEX 342.

ELEX 443 Strategies for Industrial Process Automation — Examines the practical application of automatic control systems to industrial processes. Common industrial processes are introduced and their basic operating characteristics identified. Appropriate control strategies are discussed for a wide variety of processes including boiler systems, energy management systems, evaporators, distillation columns and pH systems. These processes will be used to demonstrate the application of the most common multivariable control strategies: 3-mode feedback, cascade, selective, ratio, adaptive, non-linear and feedforward systems. Prerequisite: ELEX 343, CHSC 341, and *ELEX 442 (* co-requisite).

ELEX 444 PLC's and Distributed Control Systems — Examines the application of programmable control devices to industrial automation. Interlock and sequence control systems are designed using ISA and JEDEC symbologies and implemented using programmable logic controllers (PLC's). Microprocessor based configurable controllers are applied and programmed for process control systems. Distributed control system architectures are examined with reference to commercially available systems. Networking standards (MAP, PROWAY, IEEE 488) and their application to plantwide automation are also examined. Project work involves the design and implementation of systems using typical industrial programmable control devices. Prerequisite: *ELEX 441, *ELEX 443 (*May be taken concurrently).

ELEX 445 Industrial Control Projects and Computer-Aided Design — Examines process control system design and documentation techniques including computer-aided design. Current ISA, SAMA and ASME symbologies are used in the preparation of control system documents such as process and instrument drawings, loop diagrams, functional diagrams and specification sheets, the role of these documents in the management of instrument projects and CAD systems are used for their preparation. Hazardous area classification and system design for hazard reduction and intrinsic safety are also examined. Project work involves all aspects of control system design from concept to evaluation. Prerequisite: *ELEX 442, *ELEX 444, CHSC 343 (*May be taken concurrently).

ELEX 454 Principles of VLSI Design — A continuation of ELEX 352. More advanced topics in logic design, analysis, and simulation are covered including symbol library creation (Mentor) and behavioral language modelling. MOS chip layout and simulation concepts are further developed with emphasis on the CMPS process. Both full-custom layouts and design with gate arrays (ULA's) are explored. These include custom PLA techniques and algorithmic design. Design projects are taken to the stage where they could be sent out for manufacture. In addition to layout, students learn to use circuit extraction (MEXTRA) and circuit simulation (SPICE) programs. Analytical treatments are presented in parallel. Both static and dynamic logic structures are discussed and simulated. Laboratory work is done on Mentor Graphics workstations and IBM PC's. Prerequisite: ELEX 202, 302, and 352.

ELEX 456 Analog Integrated Circuit Design — An introduction to the analysis and design of analog integrated circuits. The course starts with a review of basic MOS and BJT, transistor operation and signal transistor linear circuits. Circuit design techniques specific to IC design are then introduced leading to techniques needed for combining stages into a complete operational amplifier. The course includes an introductory treatment of frequency response, compensation, pole splitting and slewing. Students design complete CMOS and VJT op-amps using both algebraic and computer simulation techniques and then implement their designs using transistor arrays in the laboratory. Prerequisite: ELEX 313, 353.

ELEX 458 Microelectronic Applications — A continuation of ELEX 353 stressing analog filter design employing custom CMOS monolithic integrated circuits. The course begins with the design of doubly terminated lossless ladder networks. Switched-capacitor equivalent circuits are then introduced and explained allowing the realization of switched-capacitor equivalent ladder networks. The Z-Transform is introduced to allow a more general approach to discrete time (sampled) filter circuit design. Through the aid of Bilinear Transform and Z-Plane mapping procedures, students learn to convert any analog (continuous time) filter expression into its equivalent discrete time low pass, highpass, bandpass, or band reject form and ultimate synthesis via a cascade of monolithic switched-capacitor biquad circuits. Students design, assemble, and test a switched-capacitor filter. The course terminates by returning to the thick-film hybrid circuit and investigating its potential in the area of high frequency and very high frequency circuit design. Prerequisite: ELEX 353.

ELEX 459 Microcomputer Architecture — An introduction to both macro-architecture (design of computer systems from chips) and micro-architecture (internal chip design). The micro-architecture part of the course examines architectural concepts, logical design, chip layout design, timing, data path and control circuitry architecture. The micro-architecture of the Motorola M68000 microprocessor is taken as an illustrative example. Topics in macro-architecture include microprocessor control lines, data and bus lines, interfacing of EPROM and RAM, interfacing of UARTS, exceptions and interrupts, assembly language and programming techniques, polled I/O, interrupt driven I/O, task synchronization and semaphores. Additional peripheral device interface techniques are discussed as time permits. Students design a small M68000 based computer and a suitable operating system, and implement and test their designs as an ongoing project in the laboratory.

MATH 143 Basic Mathematics for Electronics — Common and natural logarithms, logarithmic/semilogarithmic graphs, decibels, exponential growth and decay. Systems of linear equations, determinants, application to electrical networks.

Trigonometric functions, identities, solution of triangles, graphing and addition of sinusoidal functions. Complex numbers, rectangular/polar transformations, phasor representation of sinusoidal waveforms, application to electrical technology. The derivative, differentiation rules, applied maxima/minima.

MATH 243 Calculus for Electronics — Implicit differentiation, related rates and approximation using differentials with application to electrical technology. Antidifferentiation, the indefinite integral and the definite integral including evaluation of areas, average value and RMS value of a periodic waveform. Differentiation and integration of trigonometric, logarithmic, exponential and damped sinusoidal functions. Integration techniques including change of variables, integration by parts and partial fractions. First and second order differential equations with application to electronics technology. Fourier coefficients and line spectrum.

MATH 343 Transform Calculus for Electronics — Step and impulse functions. Laplace transforms of functions and mathematical operations. Partial fractions. Inverse Laplace transforms. Solutions of differential equations. Solutions of applied problems appropriate to the electronics technology.

OPMT 149 Small Business Fundamentals — The course will be centered around the preparation of a comprehensive, professional business plan for a small business of the student's own choosing, which shall be within the student's technological field. Students will work in groups of three. There will be several assignments, all of which will comprise the total business plan for the proposed venture. The final plan will be of a quality to inspire investor and lender support. Topics relevant to the plan will be introduced in the one hour weekly lecture. The two hour lab time will see these topics further developed in a seminar format. There will also be a requirement for at least three hours a week from each student, outside class, to work on the major assignment of the business plan.

OPMT 182 Operations Management — Covers problem-solving and decision making approaches to a project installation. Topics include: PERT networks, CPM barcharts, work measuring techniques in planning and project installations, method study techniques, acceptable management principles in labor supervision.

PHYS 106 Physics for Electronics — A general level course about physical quantities, their properties, relationships, how they affect each other and their connecting principles. Motion, force, mechanical energy and power are studied concerning translational and rotational motion. Then follows basic electricity, atomic physics and the band theory of solids and its application to semiconductor devices. The lab program emphasizes measurement, data analysis and experimental techniques while confirming and expanding the lecture concepts.

PHYS 206 Physics for Electronics — Topics include magnetism, induced electromotive force, thermal energy, vibrations and waves with particular reference to sound waves, electromagnetic waves; physical optics and nuclear physics. The accompanying laboratory program emphasizes measurement, data analysis and experimental techniques as well as an opportunity to expand on the lecture concepts. The presentation is on the whole non-calculus and technological applications are pointed out as appropriate.

TCOM 104 Technical Writing — This course emphasizes clear, correct, concise technical writing in the electronics field. Students learn how to organize technical information, illustrate documents, define and describe technical objects and processes, write routine letters, memos and instructions, and summarize technical articles. Students also write a resume and application letter for Coop.

TCOM 204 Technical Writing — In this course students prepare a professional job search package, practise interviewing skills, and write informal reports. They also learn techniques and formats for writing documentation. Students also do technical briefings. Prerequisite: TCOM 104.

Faculty and Staff

J.H. Casimir, B.A.Sc., P.Eng., Associate Dean

R. Bailey, Dipl.T., A.Sc.T.

R.J. Barrett, A.Sc.T.

R. Beketa, Dipl.T.

U.R. Bottcher

L.Boyle, Dipl.T., B.Sc., A.Sc.T., Program Head (Control)

R. Chadwick

J.N. Tompkin, B.Sc. (Eng.), P.Eng., Program Head (Terms 1 & 2)

E.A. Upward, Dipl.T., A.Sc.T., Program Head (Instrumentation)

MECHANICAL INDUSTRY TRAINING

Automotive Electrical/Electronics Technician
Automotive Mechanic
Commercial Transport Mechanic
Computer Numerical Control (CNC) Machine Operator
Diesel Engine Mechanic
Electric Generating Systems Technician
Heavy Duty Mechanic
Inboard/Outboard Mechanic
Industrial Maintenance Mechanic
Machinist
Millwright
Motorcycle Mechanic
Natural Gas Vehicle/Liquid Petroleum Gas Installer (NGV/LPG)
Small Engine Mechanic
Tool and Die Technician

Automotive Electrical/Electronics Technician

The Program

This program will take a technician through basic electrical diagnosing and repair to the latest "state of the art" automotive electronics.

Program Length: 17 weeks

Normal Course Hours: 0700-1345

Course Content

Under the hood electronics	Suspension
Charging systems	Brakes
Fuel systems	Accessories
Ignition systems	Electric steering
Emissions control	

Prerequisites

Journeyman or T.Q. status (must provide license number)

OR

Apprentice with a letter of recommendation from employer

OR

Pre-tested**

** PRE-TESTING: Pre-testing is available in the Mechanical Resources Centre.

Pre-Test

The pre-test will take up to one hour to complete. The general basis of the exam will be questions on electrical/electronics as they relate to automotive repair.

Procedure for Pre-Testing

All interested people must apply on an application form prior to being allowed to write the pre-test. The Admissions department will supply applicants with a form to take to the Resource Centre so that Resource Centre staff know that he/she is eligible to write the exam. Resource Centre staff will mark the exam and complete the results section of the Admissions Form for return to the Admissions department.

Resource Centre Hours

Pre-testing can be done Monday to Friday, between 0830 and 1400 hours.

Instructors

Jim Marchant, I.D., T.Q., I.P.
Gabor Retei, T.Q.

Automotive Mechanic (ELTT)

An automotive mechanic repairs and tests motor vehicles, performing such duties as disassembling, inspecting and assembling engines and accessories, cooling systems, transmissions and clutches, drive lines, brakes and controls, and suspensions.

A modern automotive mechanic employs logic and deductive reasoning in diagnosing and troubleshooting, using a variety of mechanical and computer controlled systems.

The Program

Training prepares students for entry-level employment in the automotive trade. Basic theory and related information along with hands-on shop practice enables students to become proficient in automotive maintenance and repairs. Upon successful completion of the program, students may wish to work toward a journeyed status in the trade by seeking employment as an apprentice.

Program Content

- Use safe work practices
- Solve mathematical problems
- Apply science concepts
- Process technical information
- Use basic measuring and layout hand tools
- Use power tools
- Use fasteners and fittings
- Lift loads
- Oxyacetylene cut and weld
- Describe basic hydraulic systems
- Use mechanics shop equipment
- Operate selected gas-powered equipment
- Describe mechanics trades
- Service wheels, tires, hubs and bearings
- Service suspension systems
- Service steering systems
- Service hydraulic brake systems
- Perform gasoline engine major overhaul
- Service engine support systems
- Service transmissions
- Service drive lines and drive axles
- Service electrical systems
- Service emission control systems
- Prepare for employment

Length of Program

Approximately 7.5 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1345 (first shift); or 1100-1800 (second shift)

Prerequisite

- a. Must have a valid driver's license; good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.
Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years.
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services. (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Employment is found with local garages, dealerships, and chains of specialty repair shops. A typical career path involves starting as a trainee until an apprenticeship becomes available. Although employment opportunities are mixed at this point, a reasonably good percentage of graduates are still expected to be successful getting into the trade.

Instructors

Len Arychuk, I.D., H.D.T.Q., Auto.T.Q.
Norm Cloutier, T.Q., I.P.
Terry Fletcher, I.D., T.Q., I.P.
Dave Huesken, I.D., T.Q., I.P.
Vito Ialungo, T.Q.
Rob Macgregor, I.D., T.Q., I.P.
David Ney, T.Q., I.P.
Mel Rudeen, I.D., T.Q., I.P.
Sandy Sudom, I.D., T.Q.

Commercial Transport Mechanic (ELTT) (Truck and Bus Mechanic)

A commercial transport mechanic overhauls, reconditions, repairs and maintains highway trucks, air-conditioned tour buses, fork-lifts and refrigerationequipped tractor trailers. Diagnostic troubleshooting is an important skill. Students learn to do tune-ups and general servicing of highway vehicles, and disassembly and reassembly of various vehicle parts: motor, transmission, clutch, differential, suspension system and brakes.

The Program

Training prepares students for entry-level employment as commercial transport mechanics. Basic theory and related information along with hands-on shop practice enables students to become proficient in basic mechanical maintenance of commercial transport and passenger vehicles. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

Describe mechanical trade
Solve mathematical problems
Describe and use safe work practices
Technical communications
Apply science concepts
Electrical principles and practice
Start, run, move, shut down selected equipment
Describe and use mechanic's hand tools and measuring tools
Describe and use mechanic's power tools
Describe and service hydraulic systems
Oxyacetylene welding
Arc welding
Lifting and blocking
Describe and overhaul internal combustion engines
Describe and service engine support systems
Describe and service transmissions
Describe and service clutches
Describe and service differentials
Describe and service steering systems
Describe and service frames, suspensions and attachments
Describe and service hydraulic brake systems
Describe and service air brake systems
Describe and service air operated controls and accessories

Length of Program

Approximately 7 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1345

Prerequisites

- a. Because some heavy lifting is involved, good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years.
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services. (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

There has been an increase in opportunities in this trade generally, as the inspection of commercial vehicles has recently become compulsory. As the trade is expanding at this point, apprenticeship opportunities should become available. Although those who gain the required work experience with employers may be eligible to write a Trades Qualification (T.Q.) examination, graduates of this program are encouraged to seek formal apprenticeships in the industry.

Instructors

Peter Condon, I.D., Com.Trans., T.Q.

Dave Mundell, H.D.I.P.

Ewan Sheard, I.D., Com.Trans. T.Q.

Larry Strong, I.D., Auto.I.P., Com.Trans. T.Q.

Computer Numerical Control (CNC) Machine Operator

The Program

This program trains students to operate CNC machines. Training is designed for machinists and other trades wishing to upgrade their skills in the operation of CNC equipment. Students must demonstrate ability to use conventional shop equipment before being trained to operate and program CNC equipment. Training provides students with a basic background in the production of CNC programs. The learning tasks involving programming provide the operator with sufficient background to produce simple programs, and to edit existing CNC programs.

Program Content

Describe computers
Describe basic NC and CNC programming
Use CNC equipment
Process technical information

Length of Program 14 weeks

Prerequisite

Students should have completed a machinist pre-employment program, hold a trade certificate or 4th year apprenticeship or have equivalent demonstrated capability in the following areas: use of conventional shop equipment; safe work practices; mathematical problems — machine shop geometry, angles; reading and interpreting drawings and using precision measuring instruments.

Career Potential

This efficient and precise method of machine operation has a variety of applications in: machine shops, the tool and die and moldmaking fields, the aircraft industry, steel fabrication, sign making, furniture production, etc. Any industry which requires the manufacture of individual parts or limited production runs could use this method of manufacturing.

Instructors

Ted Marchant, I.D., T.Q., I.P.

Derek Rampling, B.Ed., N.Z.C.E.(Mech), Tool & Die Advanced Trade Cert., Machinist Advanced Trade Cert., Millwright B.C.T.Q.

Diesel Engine Mechanic (ELTT)

A diesel engine mechanic repairs, maintains and rebuilds diesel engines which power a wide variety of mobile and stationary machinery. Students learn to disassemble, rebuild and reassemble diesel engines; replace working parts such as pistons, rings, bearings, gears, valves and bushings; rebuild engine blocks, cylinder heads; fuel, electrical and cooling support systems.

The Program

Students are prepared for entry-level employment as diesel engine mechanics. Basic theory and related information along with hands-on shop practice will enable students to become proficient in basic diesel engine maintenance and overhaul procedures. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

Describe mechanical trades
Solve mathematical problems
Describe and use safe work practices
Technical communications
Apply science concepts
Electrical principles and practice
Service electrical systems and components
Start, run, move, and shut down selected equipment
Describe and use mechanic's hand and measuring tools
Describe and use mechanic's power tools
Describe and service hydraulic systems
Oxyacetylene welding
Arc welding
Lifting and blocking
Describe and overhaul internal combustion engines
Describe and service engine support systems
Service cylinder block assemblies
Service engine support systems
Service emission control systems
Describe diesel fuel systems
Service diesel systems
Troubleshoot diesel engines
Marine gear
Prepare for employment

Length of Program

Approximately 10 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1345

Prerequisites

- a. Some heavy lifting is involved; good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years.
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services. (604) 434-3304

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Diesel engine mechanics are required wherever diesel engines are found in industry. This includes railways, bus and truck lines, the marine industry, repair garages, logging and mining camps and dealerships. In large businesses, apprenticeships may become available, but small shops usually don't offer them. Although some opportunities exist in this trade, graduates should be prepared to work out of town in entry level jobs in industry until trainee or apprenticeship positions become available.

Instructors

Don Eklof, I.D., Diesel Eng.I.P., H.D.I.P., Chief Instructor
Al Westfall, I.D., H.D.I.P.
Edward Wilk, H.D.I.P.

Electric Generating Systems Technician

The Program

Training will prepare students for entry-level employment in any of the diverse areas of activity related to production of electrical energy. Basic theory and related information combined with "hands-on" shop practice will provide students with a firm base upon which to build confidence and competency in future dealings with diesel-generators and their associated support equipment.

Program Content

Introduction (3 months)

Hand tools and shop practice	Welding
The lathe	Basic electricity

Electrical Generating Systems (5 months)

Prime movers
DC machines
AC circuits
Alternators and transformers
AC machines
Circuit protection, switch gear and instrumentation
Schematics and auto controls
Plant operation and maintenance procedure

Length of Program

The complete course is covered in 32 weeks or 20 weeks if credit is received for related training or experience.

Prerequisite

Grade 10 is required. Must have a good working knowledge of the English language.

Career Potential

Employment opportunities may exist with major power companies; equipment designers, assemblers, and field maintenance companies; remote northern communities and camps.

Instructor

Bob Gill, I.D., I.P.

Heavy Duty Mechanic (ELTT)

The heavy duty mechanic repairs and tests heavy duty machines such as tractors, crawlers, loaders, graders, cranes, shovels and trucks. The work ranges from simple daily maintenance checks to servicing hydraulic systems, air brakes and winches, blades and accessories. Today's heavy duty mechanic not only knows how to use service manuals, tools and equipment to best advantage, but also employs logic and deductive reasoning in diagnosing and troubleshooting.

The Program

Training prepares students for entry-level employment as heavy duty mechanics. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic heavy duty mechanical maintenance and repair. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

Describe mechanical trades
Solve mathematical problems
Describe and use safe work practices
Technical communications
Apply science concepts
Electrical principles and practice
Start, run, move and shut down selected equipment
Describe and use mechanic's power tools
Describe and service hydraulic systems
Oxyacetylene welding
Arc welding
Lifting and blocking
Describe and overhaul internal combustion engines
Describe and service engine support systems
Describe and service powertrains
Describe and service seals and bearings
Describe and service braking systems
Describe and service final drive systems
Describe and service track machine undercarriages
Describe and service track machine steering systems
Describe and service wheels, tires and rims
Describe and service working attachments
Service wheel machine steering and suspension
Prepare for employment

Length of Program

Approximately 7 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1345

Prerequisites

- a. Must have valid driver's license; good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Although there may be some opportunities in the Lower Mainland, most jobs are located in northern B.C. The majority of graduates can expect to find work in, or related to, the heavy duty field within a year of graduation. However, they may have to work at an unskilled job in the industry until an apprenticeship becomes available.

Instructors

Don Eklof, I.D., Diesel Eng.I.P., H.D.I.P., Chief Instructor
Al Westfall, I.D., H.D.I.P.
Edward Wilk, H.D.I.P.

Inboard/Outboard Mechanic (ELTT)

An inboard/outboard mechanic works primarily on gasoline engines in the marine pleasure craft industry. A mechanic must know all aspects of repair to outboard motors, inboard and inboard/outboard engines and stern-drive units. He or she will be required to do tune-ups and electrical troubleshooting, disassemble and overhaul complete units and/or components, make steering and shift adjustments, check and repair gauges and instruments, and install accessories such as radio-telephones and depth-sounders. Depending on the employer, a mechanic may need to be skilled in working with boat trailers as well as boats, and the maintenance and repair of boat rigging, boats and engines.

The Program

Students are prepared for entry-level employment as inboard/outboard marine mechanics. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic inboard/outboard maintenance. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

Use safe work practices
Describe the mechanics trades
Solve mathematical problems
Maintain mechanics measuring and hand tools
Use power tools
Use fastenings and fittings
Use materials
Use basic measuring, layout and hand tools
Lift loads
Oxyacetylene cut and weld
Process technical information
Basic electricity
Disassemble and reassemble selected engines
Service outboard engines
Service outboard engine support systems
Service marine electrical systems
Service outboard gear cases
Service remote control systems
Rig a boat for an outboard motor
Service inboard engines
Service inboard engine support systems
Service inboard propulsion systems
Describe and service outdrives
Service tilt and trim systems
Inboard/outboard installation and test running
Prepare for employment

Length of Program

Approximately 8 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1345

Prerequisites

- Good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.
- Anyone over 16 who meets the following requirements may apply.
Either:
 - Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

- Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Opportunities in this trade exist both in and out of town with dealers, marinas, fishing lodges and resorts. Most of these businesses are not unionized but apprenticeships are common in this trade. Experienced tradespeople who have not served a formal apprenticeship but can verify their employment may be eligible to write the Trades Qualification (T.Q.) examination. Although employment prospects vary with the economy and the weather, the potential is thought to be good at this point.

Instructor

Ken Nichol, I.D., T.Q.

Industrial Maintenance Mechanic (ELTT)

The Program

Industrial Maintenance Mechanics are responsible for the maintenance and repair of a wide variety of industrial equipment.

Program Content

Use safe working practices
Describe industrial maintenance mechanic occupation
Describe industrial, business and labor organization
Solve mathematical problems and use the Machinery's Handbook
Solve science concepts
Sketch and read drawings
Communicate in the workplace
Use layout tools, hand tools, and fasteners
Lift loads
Select lubricants
Use power metal working tools and shop equipment
Use measuring tools
Use support machines
Use precision grinders
Use lathes
Use shapers, planers and slotters
Use milling machines
Complete a machine shop project
Solve basic gearing problems
Distinguish between properties in materials and their uses
Use arc welding and oxy-acetylene equipment
Identify ferrous metals
Heat treat steel
Identify and test electrical equipment
Apply principles of fitting and assembling
Use steel fabrication hand tools, power tools and shop equipment
Install power drives
Perform machine installation
Describe material handling equipment
Describe, test and troubleshoot hydraulic components and systems
Describe the use computers have in industry
Describe preventive maintenance procedures
Prepare for employment

Length of Program: 60 weeks (15 months)
3 terms — 16 weeks each
2 terms — work experience — 6 weeks each

Normal Course Hours: 0700-1400

Prerequisites

- Must have valid driver's license; good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor. (604) 434-3304.
- Anyone over 16 who meets the following requirements may apply.

Either:

- Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

- Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Employment in this field may include maintenance and repair of mechanical, hydraulic, pneumatic and lubrication systems including power drives of all types, material handling equipment, conveyors and production machinery.

Machinist (ELTT)

A machinist makes or repairs metal parts, tools or machines, including custom work such as line boring pump castings or operating semi-automatic equipment on long production runs. General machinists use lathes, drill presses and milling machines to shape metal. Higher level work includes programming and operating computer controlled machine tools.

The Program

Training will prepare students for entry-level employment in the machinist trade. Basic theory and related information along with hands-on shop practice will enable students to become competent in the basic operations needed to make industrial parts and components. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

Apply safe working practices
Solve mathematical problems and use Machinery's Handbook
Read and interpret shop drawings
Use layout, measuring and testing tools and equipment
Use support machines
Identify common metals
Use lathes
Use shapers, planers and slotters
Use vertical and horizontal milling machines
Apply heat treatment
Use precision grinders
Oxyacetylene cut and weld
Fit bearings, seals, gaskets and packing
Select lubricants for specific applications
Describe the fundamentals of NC and CNC
Complete machine shop projects
Prepare for employment

Length of Program

Approximately 8 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1400 (first shift) **or**
1300-1945 (second shift)

Prerequisites

- Good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if

out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- Anyone over 16 who meets the following requirements may apply.

Either:

- Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

- Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Opportunities exist in the Lower Mainland and on Vancouver Island in machine shops. Formal apprenticeships are common in this trade, but a graduate should be prepared to take an entry level job in a shop until an apprenticeship becomes available.

Instructors

George Ainslie, I.D., Machinist I.P., Tool & Die I.P.
Greg Burke, I.P., B.Ed.
Don Grant, I.D., T.Q.
Ted Marchant, I.D., T.Q., I.P.
Derek Rampling, B.Ed., N.Z.C.E.(Mech), Tool & Die Advanced Trade Cert., Machinist Advanced Trade Cert., Millwright B.C.T.Q.
Walt Sakich, T.Q.
John Spencer, I.D., City & Guilds Machinist T.Q.
Pat Thomas, I.D., Machinist I.P., Electronics Tech T.Q.
Brian Weir, I.P.

Millwright (ELTT)

Traditionally, a millwright installed or repaired machinery in a mill. Today, millwrights work in sawmills, pulp and paper mills, mines, chemical plants, manufacturing and other industries. In some provinces millwrights erect or relocate machinery while industrial mechanics take care of overhaul and maintenance. In B.C., millwrights may be required to perform installation tasks as well as maintain and repair equipment.

The Program

Training will prepare students for entry-level employment in the millwright trade. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic millwright duties.

Program Content

Use safe work practices
Process technical information
Solve mathematical problems
Physics
Identify common materials
Sketch and read drawings
Use basic measuring layout and hand tools
Use fastenings and fittings
Use support machines
Shafts, hubs and keys
Bearings
Seals and packings
Lubrication
Power drives
Millwright shop equipment
Fitting and assembly
Riggings, ladders and scaffolds
Fluid power
Pneumatic systems
Material handling systems
Welding and cutting
Machinery installation and alignment
Machine shop equipment
Business organization and preparation for employment

Length of Program

Approximately 6 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0800-1500

Prerequisites

- a. Must be able to work at heights. Good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.
- b. Anyone over 16 who meets the following requirements may apply.
Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Job opportunities are expected in northern B.C. (mainly union). There are very few opportunities in town. Graduates should be prepared to take any entry level jobs available in the trade at this time as apprenticeships are difficult to find. Those who can gain enough experience on the job (usually 5 years) may be eligible to write the Trades Qualification (T.Q.) examination.

Instructors

Basil Acorn, T.Q.
Owen Collings, I.D., Machinist T.Q., Millwright T.Q.
Todd Davies, I.D., T.Q.
Peter Fill, I.D., T.Q., I.P.

Motorcycle Mechanic (ELTT)

A motorcycle mechanic tests, services and overhauls motorcycles and similar vehicles, and is sometimes required to repair other gas-driven products manufactured by motorcycle companies. A mechanic will be required to repair all major components including engines, drive trains, frames, wheels, suspensions and accessories. Since motorcycle mechanics often work closely with their customers, they must develop good communication skills in addition to the competence required to perform accurate diagnoses and repairs to sophisticated machines and systems.

The Program

Training prepares students for entry-level employment as motorcycle mechanics. Basic theory and related information along with hands-on shop practice will enable students to work in the motorcycle service industry. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

- Use safe work practices
- Solve mathematical problems
- Process technical information
- Use basic measuring and hand tools
- Use power tools
- Use fasteners, fittings and materials
- Oxyacetylene weld and cut
- Describe seal, gasket and bearing design and service
- Describe two and four cycle top end theory and design
- Perform two and four cycle top end service and rebuilding
- Perform clutch service
- Describe lubrication systems
- Service power transmissions
- Perform crankshaft service
- Service fuel delivery systems
- Describe exhaust system design and maintenance
- Service electrical systems
- Describe final drive service
- Service brake systems
- Service wheels and tires
- Service frame and suspension systems
- Perform selected service procedures
- Prepare for employment

Length of Program

Approximately 8 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0800-1500

Prerequisites

- a. Cannot be allergic to solvents. Good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Many positions are in service departments at franchised motorcycle dealers. There are some positions available in town, but most are out of town. There is no formal apprenticeship training in this trade at present; however, a program is being developed. Those who have the required years of experience, as verified by an employer, may be eligible to write a Trades Qualification (T.Q.) exam. Most graduates of this program are expected to find jobs in the trade.

Instructor

Tom Nelson, Dipl. Tech.

Natural Gas Vehicle/Liquid Petroleum Gas Installer (NGV/LPG)

The Program

Training prepares individuals in the motor vehicle industry to install and service NGV/LPG conversions and accessories. Theory and related information along with shop practice will develop competence to allow students to seek employment immediately in this specialized area. This program prepares you to write the required Provincial Government Certification exam.

Program Content

- Safety
- Basic test equipment
- Characteristics of NGV/LP
- Engine and ignition requirements
- NGV/LPG components
- Installation
- Refuelling
- Tune-up
- Troubleshooting

Length of Program

NGV/LPG 60 hours — 10 days

Prerequisite

Persons seeking entry into this course must show proof of journeyman status (certificate of apprenticeship or TQ acceptable) or have successfully completed a pre-entry evaluation.

Career Potential

Successful graduates may obtain employment in service stations, automobile accessory stores and motor vehicle manufacturers, as service and sales representatives, or be self-employed. A Provincial Government License is required to install and service NGV/LPG equipment.

Instructors

- Don Bilobzyski, T.Q.
- Jim Marchant, I.D., T.Q., I.P.
- Fred Raadsheer, I.D., T.Q., I.P.
- Gabor Retei, T.Q.

Small Engine Mechanic (ELTT)

A small engine mechanic is trained to diagnose, service and overhaul a variety of domestic and industrial machines powered by small gas or diesel engines. A qualified mechanic must be able to analyze the mechanical condition of lawn and turf equipment, generator sets, pumps, chain saws, golf carts, small outboard motors and other gas driven equipment, and make proper recommendations for service and repair. Small engine mechanics are employed in implement sales and equipment rental centres where quality of service and repair work directly affects product reputation and sales volume.

The Program

Students are prepared for entry-level employment as small engine mechanics. Basic theory and related information along with hands-on shop practice will enable students to perform basic small engine mechanic-related tasks. Upon successful completion of the program, students may wish to seek employment or they may choose to be self-employed.

Program Content

- Use safe working practices
- Describe the mechanics trade
- Process technical information
- Solve mathematical problems
- Apply science concepts
- Maintain mechanics measuring and hand tools
- Use mechanics shop equipment
- Use fastenings and fittings
- Oxyacetylene cut and weld
- Operate select diesel and gas powered equipment
- Identify lubricants
- Describe bearings and seals
- Electrical principles and practice
- Use special sharpening tools and machines
- Perform two and four cycle service and rebuilds
- Service electrical systems
- Service fuel systems
- Service recoil and electric starters
- Service clutch and transmission
- Service hydraulic systems
- Service diesel fuel systems
- Perform select service procedures
- Prepare for employment

Length of Program

Approximately 8 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1400

Prerequisites

- a. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.

- b. Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Opportunities exist both in and out of town in rental yards, service shops, and even golf courses. Graduates should be prepared to start as trainees, as there is no formal apprenticeship training in this trade at present.

Instructor

Doug Singel, I.D.

Tool and Die Technician

The Program

The student will require patience, deductive reasoning and above average academic and practical skills in the designing and building of tools — dies, molds and special machinery.

A tool maker is required to operate all types of shop equipment such as lathes, grinders, milling machines and computer aided electrical and numerical machines.

Program Content

Tool and die machining	Level 1, 2 and 3
Mathematics	Level 1 and 2
Metallurgy	Level 1 and 2
Mechanics	Level 1, 2 and 3
Tool design	Level 1, 2 and 3
Blueprint reading and drafting	Level 1 and 2
Manufacturing processes	Level 1 and 2
Materials and processes	Level 1 and 2
Computer numerical control (CNC)	Level 1, 2 and 3
Electrical discharge machining	Level 1 and 2
Technical communication	Level 1
Industry work terms	Level 1, 2 and 3

Length of Program: 3 academic levels with 3 co-op education sessions (total 103 weeks)

Normal Course Hours: 0700-1400

Prerequisites

Graduation from Grade 12 with English 12, Algebra 12 and Physics 11

OR

Graduation from a Metal Fabrication (Machinist) Career Preparation Program

OR

Graduation from TRAC, ELTT or Pre-apprenticeship Machinist Program

OR

Mechanical Related Technology

OR

Journeyman Machinist

OR

Individual assessment by department

Career Potential

Graduates of the two year Toolmaking Technician Program can look forward to a career in modern production process which includes machining, tool and die making, mold making, quality control, process planning, estimating, designing, teaching, technical sales and apprenticeship.

On completion, graduates will receive a technician certificate. Two years technical training credit will be given towards a machinist or tool making apprenticeship.

Instructors

George Ainslie, I.D./Machinist, I.P., Tool & Die I.P.
Owen Collins, I.D./Machinist T.Q., Millwright T.Q.

Robotics and Automation

CAD/CAM Technology

It is now a widely recognized fact that Canadian industrial and engineering practices are being radically transformed by the introduction of automation into the workplace. A variety of acronyms — CAD, CADD, CAE, CAM, and CIM — have been coined to denote that this shift is different in kind from the normal evolutionary "fine tuning" of traditional processes. The CAD/CAM program — Computer Aided Design/Computer Assisted Manufacturing — explores the effects of this transition and develops a sophisticated end user of this complex technology.

CAD/CAM has important applications in the production, supervision, distribution and storage of computerized drawing. CAD/CAM design tools are used in the development of machines, tools, buildings, structures and maps. Associated non-graphic information can be stored and retrieved affecting a wide range of corporate data bases. This challenging field offers exciting opportunities for the modern technologist.

Job Opportunities

CAD/CAM technologists will work in disciplines as diverse as surveying, civil and structural, mining and forestry, architectural practices, manufacturing industries and software development. Students have started their own consulting and service companies. Oil companies, municipalities, government agencies and manufacturing companies are actively implementing or examining CAD/CAM. Finally, opportunities exist in technical sales and training.

The Program

Two streams are currently available to students. Graduated engineering technologists and engineers are offered the opportunity of upgrading their current skill-set through a direct entry program. This program offers intense one year training in CAD/CAM. Students with a strong mechanical background are encouraged to enter the Advanced Manufacturing option of Applied Industrial Computing; students with an earth/science background are encouraged to enter the Spatial Information systems option of Applied Industrial Computing. Regular students are offered a two year program with a first year emphasizing traditional engineering discipline training.

Prerequisites

For first year applicants: Algebra 12, Physics 11.

For second year, direct entry applicants: a Diploma of Technology equivalent to BCIT or better, Departmental approval and CDCM 201 (or equivalent).

Applicants should have good communication and engineering aptitudes, ability to reason in a logical manner and good disposition towards team work.

Course Descriptions

AICO 214 AUTOCAD 2 — A continuation of AUTOCAD 1. Topics covered are annotations, dimensioning; screen menu creation, plotting and digitizing. Class assignments may be tailored to one of four discipline areas: mechanical, architectural, survey or electrical depending on student's background. Prerequisite: AUTOCAD 1 or equivalent.

AICO 313 AUTOLISP Programming 1 — Introduction to AUTOLISP. Upon completion students will be able to obtain and display user information in an AUTOCAD work session, perform math calculations using AUTOLISP, use the logic control structures of AUTOLISP, access and change system-wide AUTOCAD settings, and write elementary graphic programs in AUTOLISP.

AICO 501 Graphics Programming in FORTRAN 77 — Introduction to FORTRAN programming. Emphasis will be on the solution of engineering problems and theory of CAD systems using structured programming techniques. At the completion of the course, the student will understand how a simple CAD system is implemented. Prerequisite: CDCM 101 and CDCM 201 or equivalent.

AICO 502 Systems Analysis — Introduction to standard problem analysis tools: flow charting, Nassi-Schneidermann, decision tables, systems analysis tools, flow graphs, structure charts and data flow analysis, scheduling and CP methodology.

AICO 601 File Handling and Data base — Sequential, direct and keyed indexed file handling. Introduction to data base systems: hierarchical, network and relational. Stress on micro based systems and engineering applications. Inventory control, BOM, etc. Discussion of DB and its impact in an integrated DP environment. Prerequisite: AICO 501.

AICO 602 Systems Management — Issues related to the management of computer systems: backup strategies, security issues, system utilization measures, system accounting, vendor liaison, preventative maintenance scheduling. Stress on micro and minicomputer support.

AICO 603 Systems Acquisitions — Documentation required for the acquisition of automating equipment. Cost/benefit analysis. Analysis of organizational issues. Identifying scope of automation. Impact of implementation on existing structures.

CDCM 101 Computer Sciences 1 — Introduction to computer science and programming using the BASIC language. Emphasis will be on engineering problems using structured problem solving techniques.

CDCM 201 CADraft 1 — VAX based CADD using INTERGRAPH software. The course includes an introduction to CAD machine components, architecture, logon procedures and displays. INTERGRAPH functions including: windows, views, measuring, element placement, annotations, dimensioning, screen menu creation, plotting and digitization. Class assignments may be tailored to one of four discipline areas: mechanical, architectural, electrical or survey.

CDCM 303 Computer Aided Manufacture — Introduction to computer aided manufacturing, computer integrated manufacturing and automated process control. Generation of machine instructions from computerized 3D models. Prerequisite: CDCM 311, ELEC 470.

CDCM 311 3D CAD Drafting — A continuation of CADraft 1. Elementary 3D modeling, auxiliary, isometric and perspective projections using a computer. Prerequisite: CDCM 201 or equivalent.

CDCM 312 Graphics Programming Language — Graphics programming using INTERGRAPH's User Command Language (UC). Upon completion, students will be able to obtain and display user information in an INTERGRAPH work session, perform math calculations using UC, use the logic control structures of UC, access and change system wide INTERGRAPH settings, and write elementary graphics programs in UC.

CDCM 402 CAD/CAM Projects — Student managed projects with applications in student's area of interest. Projects integrate programming in graphics, data base practice and engineering problem solving. Prerequisite: permission of the department.

CDCM 404 CAD Design — Understanding how computers can help in the design process. Interaction with software packages using surface and/or solids modeling. Prerequisite: CDCM 304.

CHSC 105 Engineering Materials — Comparative properties of all classes of engineering materials including metals, alloys, polymers, concrete, wood and ceramics. Common causes of failure in service including fatigue, weathering, embrittlement and corrosion.

ELEX 209 Electrical Principles and Applications — Power, resistance, capacitance, inductance, circuit theory and load analysis. Concepts of integrated circuits, component identification and application. AC and DC drives, stepping motors, encoders, resolvers and induction scales.

ELEX 470 Robotics and CNC Languages — Introduces the student to current CNC and robot languages such as APT and VAL. Investigates the integrated manufacturing centre. Prerequisite: CDCM 311 and MECH 130 or CDCM 303.

MATH 149 Basic Technical Mathematics for Mechanical — Introduction to differential and integral calculus of polynomial functions including appropriate support topics from algebra, analytical geometry, plane geometry, solid geometry, trigonometry and the theory of logarithms and exponential functions. There will be a strong emphasis on applications to the physical sciences and mechanical engineering.

MATH 249 Calculus for Mechanical — An introduction to the differential and integral calculus of trigonometric, logarithmic and exponential functions and their application, maxima and minima, areas and volumes, centroids and moments of inertia, calculation of work, bending beams, functions of several variables and partial derivatives, and elementary first order differential equations.

MATH 349 Numerical Methods for Mechanical — Numerical integration, solution of algebraic and transcendental equations by iterative methods, numerical solution of differential equations and numerical differentiation. Matrix approach to 2D and 3D transformations with application to computer graphics. Gauss-Jordan method applied to the solution of systems of linear equations. Linear programming using the simplex method and the transportation problem.

MATH 460 Mathematics for CAD/CAM — Geometric modeling including cubic splines, bezier curves and surface patches. Matrix approach to transformations. Raster algorithms and techniques including curve generation, halftoning and other special effects. Kinematics and simulation. Solid modeling. Overview of finite element method. Selected algorithms from cartography. Interactive computer graphics concerns.

MECH 100 Mechanical Drafting 1 — Techniques of producing and reading mechanical drawings using standard format and the development of basic skills in applying these techniques. Use of instruments, line work, lettering, geometric construction, isometrics, with emphasis placed on orthographic projection, auxiliary views, sections, dimensions and working drawings.

MECH 104 Statics — Vectors, force systems, concurrent and coplanar, noncurrent and coplanar. Graphical representation and solutions. Ideas of equilibrium. Mathematical representation of equilibrium. Analysis of frames. Statically determined structures. Redundancies. Beams, principles of moments and centroids. Second moment of area.

MECH 106 Manufacturing Processes 1 — A basic orientation course which provides the student with practice in metal removal, and a study of related theory.

MECH 107 Thermal Processes — Introduction to heat and fluid processes, steam tables, first law of thermodynamics. Basic steam power and refrigeration cycles.

MECH 200 Mechanical Drafting 2 — Advanced techniques including limits and fits, isometric and orthographic single line piping diagrams, descriptive geometry, intersections, development, gears, threads and fasteners, weld symbols and working drawings and projects.

MECH 205 Dynamics — Kinematics: basic equation of motion, motion diagrams, trajectories. Kinetics: Newton's Laws, inertia, rectilinear and rotational kinetics, systems of bodies. Work, energy, power, efficiency.

MECH 206 Mechanics of Materials — Stress, strain and deflection. Tension, compression, shear, torsion, deflection and buckling of material under load. Beams, columns, shafts, thin and thick-walled cylinders, riveted and welded joints.

MECH 240 Manufacturing Processes 2 — Machine tool operation, production processing and economics; evaluation of production features, maintenance. Metal joining processes and equipment, production costs and design applications.

MECH 301 Machine Design 1 — Covers the theory in prerequisite courses plus combined stresses with emphasis on solution by Mohr's circle; theories of failure; stress concentration; fatigue phenomena; welded connections; bolted and riveted connections; spur; helical and worm gear drives; speed reducers; belt and roller chain drives; flexible couplings; shafts; antifriction and journal bearings; brakes and clutches; power screw; helical and leaf springs; introduction to mechanical vibrations with emphasis on the critical speeds of rotating assemblies. Continued in MECH 401.

MECH 320 Fluid Power 1 — Provides an understanding of pneumatic control systems. Fluid power components, their symbols, function and construction are examined and used in the design, construction and testing of simple and sequential control systems. Sizing calculations for system components are covered.

TCOM 109 Technical Communication — In this course, students learn the basic skills to become effective writers and speakers in the mechanical industry. They learn the layout, content and graphic skills of technical writing, research and employment application techniques. They write technical memos, letters and descriptions and give an oral report.

TCOM 210 Technical Communication — In this course, students practice the reporting techniques used in the mechanical engineering industries. They write feasibility reports, proposals, memos, letters, comparison and progress reports, and a formal technical report. They also present an oral technical report. Prerequisite: TCOM 109.

Computer Aided Engineering

Computer Aided Engineering (CAE) embraces a diverse field of engineering disciplines. Programs in CAE have in common the use of emerging computer technology to solve traditional problems. All of these programs mix courses of interest to discipline specialists with general courses in new technologies.

The foundation courses in computers include Computer Aided Design (CAD), Computer Aided Manufacturing (CAM), Spatial Information Systems (SIS), Geographical Information Systems (GIS), Computer Numerical Control (CNC), and Direct Numerical Control (DNC). Programming languages, file handling and database systems, theory and practice of networking, distributed systems are used where relevant.

These programs are of interest to the practicing technologist and engineer, recent graduates from technology level programs, and others with relevant engineering backgrounds. Four one year post-diploma level programs are currently offered:

- Spatial Information Systems
- Advanced Manufacturing
- Resource Processing
- CAD Programming

Spatial Information Systems

Post-diploma Program

Computers are affecting all engineering practice, but nowhere is the technology more exciting than in the creation and maintenance of earth models. With the computer, our traditional flat, deformed representations of the earth are being transformed into fully informative models with a myriad of applications. The development of Spatial Information Systems has been accelerated by advances in computer hardware, software and space technology.

The objectives of this one year post-diploma program are to upgrade the skills of those students already in possession of a relevant National Diploma and/or equivalent experience in the Surveying, Photogrammetry, Civil and Structural, Mining and Forestry Technologies; to provide these graduate technologists with the tools to perform advanced computerized analysis specific to their respective technologies; to have the graduate technologist develop competence in the use of micro/mini and mainframe computers, as well as in networking of systems. Graduate technologists will also become proficient in mathematical skills to a level where they will be able to solve modeling and simulation problems. To allow the graduate technologist to acquire the knowledge and practical aspects of remote sensing and digital image processing and finally, to provide the graduate technologist the fundamentals of digital terrain mapping through analytical photogrammetry.

SIS have important applications in the production, supervision, distribution and storage of computerized maps. SIS tools include the processing of remotely sensed data used in the development of source manuscripts. Associated nongraphic information can be stored and retrieved affecting a wide range

of corporate data bases. SIS also includes the production of local digital terrain, subterrain and submarine models of earth features. These models have extensive applications in the resource industries. It is to be noted that interesting applications of this technology exist outside of the earth based sciences, particularly in medicine.

This challenging program offers exciting opportunities for the technologist already trained in an earth based science.

Job Opportunities

Since SIS graduates will already have completed a curriculum of study at the National Diploma level or higher in a traditional engineering discipline, they will make ideal "facilitators" of the new technology. They will be able to assist moderate sized engineering firms to select CAM technology and position it successfully within the corporate structure. In addition, graduates should be able to direct training programs, provide system management services, develop new software applications and use the system as a drafting and design tool.

The Program

Graduated engineering technologists and engineers are offered the opportunity of upgrading their current skill-set through a one year post-diploma level program. The program offers intense one year training in computing.

Emphasis is placed on the practical use of graphics systems for the solution of mapping problems, use of the graphics system as a design tool, and projects in SIS selected from the student's field of interest. Several software packages will be sampled. Data base concepts and applications, systems management, and acquisition studies are addressed.

Prerequisite

Applicants must have attained a Diploma of Technology equivalent to BCIT or better, or approval by the Associate Dean.

Applicants should have good communication and engineering skills, ability to reason in a logical manner and a good disposition towards team work.

Course Descriptions

AICO 501 Graphics Programming in FORTRAN 77 — Introduction to FORTRAN programming. Emphasis will be on the solution of engineering problems and theory of CAD systems using structured programming techniques. At the completion of the course the student will understand how a simple CAD system is implemented. Prerequisite: CDCM 101 and CDCM 201 or equivalent.

AICO 502 Systems Analysis — Introduction to standard problem analysis tools: flow charting, Nassi-Schneidermann, decision tables, systems analysis tools, flow graphs, structure charts, and data flow analysis, scheduling and CP methodology.

AICO 503 CAD and Graphics — This concentrated CAD course is intended to give the student extensive hands-on practice on leading edge CAD equipment. Students will be given exposure to both 2D and 3D graphics with examples drawn from the earth sciences.

AICO 504 Data Structures in "C" — Introduction to "C". Emphasis will be on the solution of problems solvable in a microcomputer environment; software package design and implementation, and programming techniques. Problems will be selected from polygon processing algorithms. Prerequisite: CDCM 101 or equivalent.

AICO 505 Spatial Information Systems 1 — Gives the student a broad overview of hardware, software systems and capability measuring. The course establishes our perspective for subsequent courses in Spatial Information Systems.

AICO 507 Applied Mathematics 1 — Gives students expertise in numerical methods. Floating point computations, matrices, and simultaneous linear equations, interpolation methods, approximation methods, numerical integration, solutions to non-linear equations, random number generation.

AICO 601 File Handling and Data Base — Sequential, direct and keyed indexed file handling. Introduction to data base systems: hierarchical, network and relational. Stress on micro based systems and engineering applications. Inventory control, BOM, etc. Discussion of DB and its impact in an integrated DP environment. Prerequisite: AICO 501.

AICO 602 Systems Management — Issues related to the management of computer systems: backup strategies, security issues, system utilization measures, system accounting, vendor liaison, preventative maintenance scheduling. Stress on micro and minicomputer support.

AICO 603 Systems Acquisitions — Documentation required for the acquisition of automating equipment. Cost/benefit analysis. Analysis of organizational issues. Identifying scope of automation. Impact of implementation on existing structures.

AICO 605 Issues in Networking — Communication between computers. Networking theory and practice. Distributed processing with special emphasis on microcomputers. Software management of LAN systems. Theory of ETHERNET and ISO standards.

AICO 607 Projects — Affords students the opportunity to work on a comprehensive project with an industry mentor, or on a project of their own choosing. Students will have an internal advisor. The project is intended to demonstrate the student's practical grasp of SIS.

AICO 608 Natural Resources and Engineering Mapping — Informs students of the fundamental operations involved in the process of digital base mapping through analytical photogrammetry, and how to compile, transform, edit and store data sets in a form equivalent to government standards for this type of information.

AICO 618 Remote Sensing — Describes the concepts and foundations of remote sensing; the features of the instrumentation used in remote sensing; defines pattern recognition and examines the key steps in applying remote sensing to earth resources management problems.

AICO 619 Spatial Information Systems 2 — Defines the components of a GIS; gives system functions and capabilities; examines weaknesses and strengths of GIS, DEMs, raster vs polygon systems, micro vs minicomputer implementations. Various applications are addressed.

AICO 620 Spatial Information Systems 3 — Examines a variety of data structures used in SIS. Develops a number of the common algorithms used in GIS development and gives the student an appreciation of the internals of a GIS. Students will understand the reasons for the strengths and weaknesses of the different systems.

AICO 621 Applied Mathematics 2 — A continuation of Applied Mathematics 1.

CDCM 312 Graphics Programming Language — Graphics programming using INTERGRAPH's User Command Language (UC). Upon completion, students will be able to obtain and display user information in an INTERGRAPH work session, perform math calculations using UC, use the logic control structures of UC, access and change system wide INTERGRAPH settings, and write elementary graphics programs in UC.

Advanced Manufacturing

Post-diploma Program

It is now a widely recognized fact that Canadian industrial and engineering practices are being radically transformed by the introduction of automation into the workplace. Nowhere is this transformation in greater evidence than the area of manufacturing techniques. A variety of tools — CAD (Computer Aided Design), CAM (Computer Aided Manufacturing), CIM (Computer Integrated Manufacturing) — are available to the manufacturing technologist which, if properly exploited, lead to productivity increases.

The objectives of this one year post-diploma program are to upgrade the skills of those students already in possession of a relevant National Diploma and/or equivalent experience; to develop competence in the use of manual parts programming; to develop competence in the use of NC/CNC (Numerical Control/ Computerized Numerical Control) techniques; to develop competence in at least one higher level parts programming language; and to familiarize the student with emerging technological advances in CIM.

Successful students will be able to provide technical assistance in introducing this technology into a traditional shop; undertake cost/benefit analyses; perform feasibility studies; develop implementation plans; develop training programs for other employees; and be competent users of the technology.

This challenging program offers exciting opportunities for the technologist already trained in a relevant engineering discipline.

Job Opportunities

Since graduates will already have completed a curriculum of study at the National Diploma level or higher in a traditional engineering discipline, they will make ideal "facilitators" of the new technology. They will be able to assist moderate sized engineering firms select CAM technology and position it successfully within the existing corporate structure. In addition, the graduate should be able to direct training programs, provide system consultation services, develop new parts programs and use CAD as a drafting and design tool.

The Program

Graduated engineering technologists and engineers are offered the opportunity of upgrading their current skill set through a one year post-diploma level program. The program offers intense one year training in Computer Aided Manufacturing.

The emphasis is placed on the practical use of computer systems for the solution of manufacturing production problems. Projects will be selected from the student's field of interest. Several software packages will be sampled.

Prerequisite

Applicants must have attained a Diploma of Technology equivalent to BCIT or better, or approval of the Associate Dean.

Applicants should have good communication and engineering skills, ability to reason in a logical manner and good disposition towards team work.

Course Descriptions

AICO 501 Graphics Programming in FORTRAN 77 — Introduction to FORTRAN programming. Emphasis will be on the solution of engineering problems and theory of CAD systems using structured programming techniques. At the completion of the course the student will understand how a simple CAD system is implemented. Prerequisite: CDCM 101 and CDCM 201 or equivalent.

AICO 502 Systems Analysis — Introduction to standard problem analysis tools: flow charting, Nassi-Schneidermann, decision tables, systems analysis tools, flow graphs, structure charts, and data flow analysis, scheduling and CP methodology.

AICO 508 CNC Programming — Introduces the student to current CNC and Robot languages such as APT and VAL. Investigates the integrated manufacturing centre. Special emphasis on exposure to CNC machines, model milling machines and lathes, drill presses, and 2 1/2 axis milling machines.

AICO 510 3D Graphics and Design — This concentrated CAD course is intended to give the student extensive hands-on practice on leading edge, micro-based CAD equipment. Both the AUTOCAD system and ComputerVisions Microcad packages will be used. 2D drafting, 3D wire frame models, and surface modeling.

AICO 512 Manufacturing Management — At the completion of this course students will be familiar with techniques, models, procedures and philosophies for managing a manufacturing process.

AICO 601 File Handling and Data Base — Sequential, direct and keyed indexed file handling. Introduction to data base systems: hierarchical, network and relational. Stress on micro-based systems and engineering applications. Inventory control, BOM, etc. Discussion of DB and its impact in an integrated DP environment. Prerequisite: AICO 501.

AICO 605 Issues in Networking — Communication between computers. Networking theory and practice. Distributed processing with a special emphasis on microcomputers. Software management of LAN systems. Theory of ETHERNET and ISO standards.

AICO 611 Advanced Manufacturing Projects — At the completion of this course the student will be able to analyze the causes of a CIM related problem in an industrial setting and prepare a written report describing a feasible solution to the problem.

AICO 613 Quality Control — Provides the student with a concentrated applications-focused overview of the fundamentals of statistical process control.

AICO 614 Interactive Graphics NC Programming — Automatic tool path takeoff from a CAD model. Exposure to production model CNC milling machines and lathes. Software tools will be popular microbased systems.

AICO 615 Robot Applications — Theory and practice in automated manipulators and servers. Multi-axis arms, painters, welding units, pick and place devices. Programming methodologies. Effective selection of devices.

AICO 616 Computer Integrated Manufacturing — This course is the capstone course of the advanced manufacturing management program. The CIM course has been designed to integrate and expand on topics covered in the other courses in the program.

Resource Processing

Computers are changing the way we do business: one of the major areas of automation has been in the means used for the processing of our natural resources.

In the past, this area of automation has been left in the hands of computer experts and automation specialists. The end users of the technology: forestry, mining and mechanical production technologists and engineers, have been hard pressed to stay current with these techniques. The program will attempt to address this problem by allowing these technologists to upgrade their existing skills with a comprehensive understanding of how computer techniques can be applied to many phases of natural resource processing.

The objective of the program is to produce facilitators of this technology who are familiar with the production issues in forestry, mining and mechanical production, who are also capable of selecting and implementing computers for specific production tasks: inventory control, process control, modeling and simulation, and optimization. In complex process control environments, the graduate should be able to liaise knowledgeably with process control specialists.

This challenging program offers exciting opportunities for the technologist already trained in a production science.

Job Opportunities

Since all students will already have completed a curriculum of study at the National Diploma level or higher in a production engineering discipline, they will make ideal "facilitators" of the new technology. They will be able to assist moderate sized engineering firms select this technology and position it successfully within the existing corporate structure. In addition, the graduate should be able to direct training programs, provide system management services and develop new software applications.

The Program

Graduated engineering technologists and engineers are offered the opportunity to upgrade their current skill set through a one year post-diploma program. The program offers intense one year training in computing.

Emphasis is on the practical use of these systems for the solution of production problems, use of the computer system as a design tool, and production projects selected from the student's field of interest. Several software packages will be sampled. Data Base concepts and applications, systems management, and acquisition studies are addressed.

Prerequisites

Applicants must have attained a Diploma of Technology equivalent to BCIT or better, or approval of the Associate Dean.

Applicants should have good communication and engineering skills, ability to reason in a logical manner and good disposition towards team work.

Course Descriptions

AICO 501 Graphics Programming in FORTRAN 77 — Introduction to FORTRAN programming. Emphasis will be on the solution of engineering problems and theory of CAD systems using structured programming techniques. At the completion of the course the student will understand how a simple CAD system is implemented. Prerequisite: CDCM 101 and CDCM 201 or equivalent.

AICO 502 Systems Analysis — Introduction to standard problem analysis tools: flow charting, Nassi-Schneidermann, decision tables, systems analysis tools, flow graphs, structure charts, and data flow analysis, scheduling and CP methodology.

AICO 504 Data Structures in "C" — Introduction to "C". Emphasis will be on the solution of problems solvable in a microcomputer environment; software package design and implementation, and programming techniques. Problems will be selected from polygon processing algorithms. Prerequisite: CDCM 101 or equivalent.

AICO 506 Linear Algebra with Computer Applications — Stress on techniques required for modeling and simulation. Transformations and projections. Practical applications implemented on computers. Discrete and stochastic models. Modeling packaged software versus modeling programs. Practical examples from the mining, petroleum, pulp and paper and manufacturing environments. Projects will be completed in higher level languages and/or a variety of simulation packages.

AICO 509 Technical Aspects of Process Control — Introduction to process control. Applications of process control in petrochemical and forestry industries. Hardware and software issues involved in process control.

AICO 511 Programmable Controllers — Introduction for the non-electrical specialist to PLC's. Ladder diagrams, electrical theory and programming. Discussion of selection criteria.

AICO 601 File Handling and Data Base — Sequential, direct and keyed indexed file handling. Introduction to data base systems: hierarchical, network and relational. Stress on micro based systems and engineering applications. Inventory control, BOM, etc. Discussion of DB and its impact in an integrated DP environment. Prerequisite: AICO 501.

AICO 602 Systems Management — Issues related to the management of computer systems: backup strategies, security issues, system utilization measures, system accounting, vendor liaison, preventative maintenance scheduling. Stress on micro and minicomputer support.

AICO 603 Systems Acquisitions — Documentation required for the acquisition of automating equipment. Cost/benefit analysis. Analysis of organizational issues. Identifying scope of automation. Impact of implementation on existing structures.

AICO 604 Real Time Systems — Fundamentals of Real Time Systems development. Signal interpretation. Peripheral and sensor interfaces. Integrity checks. Audit trails.

AICO 605 Issues in Networking — Communication between computers. Networking theory and practice. Distributed processing with special emphasis on microcomputers. Software management of LAN systems. Theory of ETHERNET and ISO standards.

AICO 606 Advanced Software Systems — Point of entry systems. Integrated process control systems. Inventory control. Students will attempt the design and development of large software systems. Examples drawn from engineering and industrial systems with emphasis on integration with Management Information Systems.

AICO 610 Systems Projects — Students working in small groups will propose and develop projects relevant to their disciplines. Groups will be interdisciplinary and will act under the guidance of selected faculty and/or industrial experts. Presentations, documentation and development will be to industry standards.

CAD Programming

Post-diploma Program

CAD (Computer Aided Design) is becoming a commonplace tool in the offices of general engineering companies, architects offices and mapping agencies. This program has as its objective the development of a computer skill set that will allow engineers and technologists to take full advantage of this emerging technology.

CAD has important applications in the production, supervision, distribution and storage of computerized drawings. CAD design tools are used in the development of machines, tools, buildings and structures. Associated nongraphic information can be stored and retrieved affecting a wide range of corporate data bases. This challenging field offers exciting opportunities for the modern technologist.

Job Opportunities

CAD programmers will work in disciplines as diverse as general engineering offices: as drafter/designers, as CAD facilitators, or as system managers; in manufacturing industries and in software development. Students have started their own consulting and service companies. Finally, opportunities exist in technical sales and training.

The Program

Graduated engineers and technologists are offered the opportunity of upgrading their current skill sets through this program. Students will be exposed to mini and micro based CAD systems, programming languages, graphics programming languages, systems management and acquisitions, file handling and data base systems.

Prerequisites

A National Diploma of technology in a relevant engineering discipline (mechanical, C&S, building, mining, geology, etc.), or an engineering degree.

Applicants should have good communication and engineering aptitudes, ability to reason in a logical manner and a good disposition towards team work.

Course Descriptions

AICO 313 AUTOLISP Programming — Introduction to AUTOLISP. Upon completion students will be able to obtain and display user information in an AUTOCAD work session, perform math calculations using AUTOLISP, use the logic control structures of AUTOLISP, access and change system-wide AUTOCAD settings, and write elementary graphic programs in AUTOLISP.

AICO 501 Graphics Programming in FORTRAN 77 — Introduction to FORTRAN programming. Emphasis will be on the solution of engineering problems and theory of CAD systems using structured programming techniques. At the completion of the course, the student will understand how a simple CAD system is implemented. Prerequisite: CDCM 101 and CDCM 201 or equivalent.

AICO 502 Systems Analysis — Introduction to standard problem analysis tools: flow charting, Nassi-Schneidermann, decision tables, systems analysis tools, flow graphs, structure charts and data flow analysis, scheduling and CP methodology.

AICO 503 CAD and Graphics — This concentrated CAD course is intended to give the student extensive hands-on practice on leading edge CAD equipment. Students will be given exposure to both 2D and 3D graphics with examples drawn from the earth sciences.

AICO 504 Data Structures in "C" — Introduction to "C". Emphasis will be on the solution of problems solvable in a microcomputer environment; software package design and implementation, and programming techniques. Problems will be selected from polygon processing algorithms. Prerequisite: CDCM 101 or equivalent.

AICO 506 Linear Algebra with Computer Applications — Stresses techniques required for modeling and simulation. Transformations and projections. Practical applications implemented on computers. Discrete and stochastic models. Modeling packaged software versus modeling programs. Practical examples from the mining, petroleum, pulp and paper and manufacturing environments. Projects will be completed in higher level languages and/or a variety of simulation packages.

AICO 510 3D Graphics and Design — This concentrated CAD course is intended to give the student extensive hands-on practice on leading edge micro based CAD equipment. Both the AUTOCAD system and ComputerVisions Microcad packages will be used. 2D drafting, 3D wire frame models, and surface modeling.

AICO 601 File Handling and Data Base — Sequential, direct and keyed indexed file handling. Introduction to data base systems: hierarchical, network and relational. Stress on micro based systems and engineering applications. Inventory control, BOM, etc. Discussion of DB and its impact in an integrated DP environment. Prerequisite: AICO 501.

AICO 602 Systems Management — Issues related to the management of computer systems: backup strategies, security issues, system utilization measures, system accounting, vendor liaison, preventative maintenance scheduling. Stress on micro and minicomputer support.

AICO 603 Systems Acquisitions — Documentation required for the acquisition of automating equipment. Cost/benefit analysis. Analysis of organizational issues. Identifying scope of automation. Impact of implementation on existing structures.

AICO 605 Issues in Networking — Communication between computers. Networking theory and practice. Distributed processing with special emphasis on microcomputers. Software management of LAN systems. Theory of ETHERNET and ISO standards.

AICO 622 CAD Project — Student managed projects with applications in student's area of interest. Projects integrate programming in graphics, data base practice and engineering problem solving. Prerequisite: permission of the department.

CDCM 312 Graphics Programming Language — Graphics programming using INTERGRAPH's User Command Language (UC). Upon completion, students will be able to obtain and display user information in an INTERGRAPH work session, perform math calculations using UC, use the logic control structures of UC, access and change system wide INTERGRAPH settings, and write elementary graphics programs in UC.

MATH 460 Mathematics for CAD/CAM — Geometric modeling including cubic splines, bezier curves and surface patches. Matrix approach to transformations. Raster algorithms and techniques including curve generation, halftoning and other special effects. Kinematics and simulation. Solid modeling. Overview of finite element method. Selected algorithms from cartography. Interactive computer graphics concerns.

Mechanical Technology

Design and Manufacturing Options

The mechanical technologist may be involved in the design, construction and installation of machines and mechanical devices, or in the production side of manufacturing. It is a field of tremendous scope in that specialists must be able to analyze problems, propose efficient technical solutions, implement these solutions and evaluate the results.

Job Opportunities

Graduates can choose from a diversity of work situations. Consulting engineering offices employ mechanical technologists as design draftsmen for machinery, steelwork, piping, power plants and installation. Others may choose to take up positions in plant engineering offices, production departments or estimating departments. Additional opportunities exist in testing, inspection, installation, service and technical sales. Supervisory posts may be assumed after appropriate job experience.

The Program

In the first three terms, all students in the technology have the same curriculum which includes math, physics and specialized studies in mechanical engineering, production and materials. Lecture material is given practical application in problem solving and design sessions, and in lab and shop assignments. Field trips to industrial settings are an important adjunct to the classroom and lab and are also useful in helping students decide on an area of speciality. In the final term of their second year, students stream into one of two options: **Design or Manufacturing**.

The Mechanical Technology reserves the right to limit the number of students in any of its options.

This program is accredited by the Applied Science Technologists and Technicians of BC.

Prerequisites

Algebra 12 and Physics 11 are course requirements for this program. Applicants should have a solid academic background and good communications skills, be able to apply ideas in practical situations and be able to work effectively with people in a team situation.

Course Descriptions

CDCM 101 Computer Science 1 — Introduction to computer science and programming using BASIC. Emphasis will be on structured problem solving. Applications drawn from the engineering disciplines.

CDCM 349 CAD Drafting 1 — Rudiments of computer aided drafting. Machine log-on procedures, simple 2-D drawings, orthographic projection, dimensioning, annotations.

CDCM 419 CAD Drafting 2 — A continuation of CAD Drafting 1. Elementary 3D modeling auxiliary, isometric and perspective projections.

CHSC 105 Engineering Materials — Comparative properties of all classes of engineering materials including metals, alloys, polymers, concrete, wood and ceramics. Common causes of failure in service including fatigue, weathering, embrittlement and corrosion.

CHSC 205 Engineering Materials — Continuation of CHSC 105.

ELEX 255 Instrumentation for Mechanical — Topics include basic devices used for measuring pressure, temperature, level, density and flow. Instrument static and dynamic performance. Instrument application to industrial processes. Design of pneumatic and hydraulic measurement and control equipment using high-gain amplifiers and negative feedback. Basic principles of automatic control, process, dynamic behavior and controllability. On/off, proportional, integral and derivative control. Control strategy. Ratio, cascade, multivariable and feedforward systems. Introduction to computer control.

ELEX 257 Electrical Equipment — An introduction to industrial electrical equipment. Topics include AC and DC motors and their application to electro-mechanical drive systems; protecting and controlling related equipment; sources of energy; transformation into primary and secondary voltage levels, distribution of power throughout the plant; switching; voltage control and power factor correction.

ELEX 470 CNC and Robotic Languages — Introduces the student to current CNC and Robot languages such as APT and VAL. Investigates the integrated manufacturing centre. Prerequisite: CDCM 311 and MECH 130 or CDCM 303.

MATH 149 Basic Technical Mathematics for Mechanical — Introduction to differential and integral calculus of polynomial functions including appropriate support topics from algebra, analytical geometry, plane geometry, solid geometry, trigonometry and the theory of logarithms and exponential functions. There will be strong emphasis on applications to the physical sciences and mechanical engineering.

MATH 249 Calculus for Mechanical — An introduction to the differential and integral calculus of trigonometric, logarithmic and exponential functions and their application; maxima and minima, areas and volumes, centroids and moments of inertia, calculation of work, bending beams, functions of several variables and partial derivatives, and elementary first order differential equations.

MATH 349 Numerical Methods for Mechanical — Numerical integration, solution of algebraic and transcendental equations by iterative methods, numerical solution of differential equations and numerical differentiation. Matrix approach to 2-D and 3-D transformations with application to computer graphics. Gauss-Jordan method applied to the solution of systems of linear equations. Linear programming using the simplex method and the transportation problem.

MATH 449 Statistics and Quality Control for Mechanical — Organization and graphical presentation of data, frequency distributions and measures of central tendency, variation and other measures. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Method of least squares, regression and correlation. Control chart concepts and application, acceptance sampling. Chi-squared tests. Non-parametric statistics

MATH 494 Computer Graphics for Mechanical — Introduces students to interactive BASIC, and concepts of programming in two and three dimensions. Students experience "hands-on" practice with computer graphics systems.

MECH 100 Mechanical Drafting 1 — Techniques of producing and reading mechanical drawings using standard format and the development of basic skills in applying these techniques. Use of instruments, line work, lettering, geometric constructions, isometrics, with emphasis placed on orthographic projection, auxiliary views, sections, dimensions and working drawings.

MECH 104 Statics — Vectors, force systems, concurrent and coplanar, nonconcurrent and coplanar. Graphical representation and solutions. Ideas of equilibrium. Mathematical representation of equilibrium. Analysis of frames. Statically determined structures. Redundancies. Beams, principles of moments and centroids. Second moment of area.

MECH 106 Manufacturing Processes 1 — A basic orientation course which provides the student with practice in metal removal, and a study of related theory.

MECH 107 Thermal Processes — Introduction to heat and fluid processes. Steam tables, first law of thermodynamics. Basic steam power and refrigeration cycles.

MECH 200 Mechanical Drafting 2 — Advanced techniques including limits and fits, isometric and orthographic single line piping diagrams, descriptive geometry, intersections, development, gears, threads and fasteners, weld symbols, working drawings and projects.

MECH 206 Mechanics of Materials — Stress, strain and deflection. Tension, compression, shear, torsion, deflection and buckling of material under load. Beams, columns, shafts, thin- and thick-walled cylinders, riveted and welded joints.

MECH 208 Dynamics — Kinematics: basic equation of motion, motion diagrams, trajectories. Kinetics: Newton's Laws, inertia, rectilinear and rotational kinetics, systems of bodies. Work, energy, power and efficiency.

MECH 240 Manufacturing Processes 2 — Machine tool operations, production processing and economics, evaluation of production features, maintenance. Metal joining processes and equipment, production costs and design applications.

MECH 301 Machine Design 1 — An introductory course in machine design, with emphasis on elementary design and analytical procedures for machine components. The course covers theories of failure, combined stresses, stress concentration, fatigue phenomena, welded and threaded connections, shafts, belt drives, geometric and force relationships in spur gearing, and an introduction to various other machine elements. Problems are handled in both S.I. and British units.

MECH 302 Thermal Engineering 1 — First and second law of thermodynamics. Steady and non-flow energy equations, specific heats of gases, vapor tables, gas and vapor processes. Carnot, Rankine and basic IC engine cycles. Air compressors. Heat transfer.

MECH 303 Fluid Mechanics — Basic principles of fluid properties, energy losses, Reynold's number, Moody diagram, flow measuring devices, dynamics of flow lift and drag. Fluid statics.

MECH 304 Manufacturing Processes 3 — A study of hot and cold fabrication processes, materials and machines, quantities/costs will be investigated. An introduction to CNC programming by both manual and punched tape inputs.

MECH 320 Fluid Power 1 — Provides an understanding of pneumatic control systems. Fluid power components, their symbols, function and construction are examined and used in the design, construction and testing of simple and sequential control systems. Sizing calculations for system components are covered.

MECH 401 Machine Design 2 — This course is a sequel to MECH 301, covering couplings, brakes, and clutches; anti-friction and journal bearings; helical, bevel and worm gearing; power screws, springs and machine frame components; and an introduction to mechanical vibrations, with emphasis on critical speeds of rotating bodies. An introductory treatment of bulk materials handling systems is also included. Problems are handled in both S.I. and British units.

MECH 402 Theory of Mechanisms — A course in the theory of mechanisms (kinematics) with emphasis on graphical methods to relate displacement, velocity, and acceleration in the components of mechanisms. The course covers both analytical and design procedures with applications to mechanisms, such as slider/cranks, four-bar linkages, planetary gear trains, cams, and intermittent motion devices. Graphical differentiation is treated in detail for various types of cam follower motions. A comprehensive treatment of Coriolis acceleration is included. Mechanisms in which one or more links can change length

(e.g., hydraulic cylinder members) are also investigated. The course concludes with a seminar in which each student makes a ten-minute presentation.

MECH 404 Thermal Engineering 2 — Mixtures of gases and vapors, Gibbs-Dalton Law, psychrometry, air conditioning, combustion processes and nozzle flow; analysis of steam and gas turbines and jet propulsion. Practical lab investigations by students.

MECH 413 Tool Design — The course includes introduction to design of special purpose tooling, process planning, design considerations of various types of jigs, fixtures, gauges, metal-cutting dies, feed mechanisms, presses, scrap strip-layout, standard parts. Assignments will have to be worked on away from classroom.

MECH 420 Fluid Power 2 — Provides an understanding of hydraulic control systems and an introduction to fluidic control systems and control logic. Fluid power components, their symbols, function and construction are examined and used in the design, construction and testing of a variety of hydraulic control systems. Sizing calculations for system components are also covered. Prerequisite: MECH 320.

MECH 444 Metrology — Includes measurement of surface texture and flatness, optical and electrical comparators, metrology of screw threads, precision measuring instruments, fundamentals of inspection, mass production gauging.

MECH 445 CNC — Computer Numerical Control programming and verification on a 3-axes CNC mill and other CNC machines.

MECH 460 Engineering Economy — Emphasizes the importance of making sound economic decisions when faced with alternative methods of solving technical problems. The course material provides the basic skills and concepts required to analyze comparative costs and to understand the time-value of money (interest), inflation, depreciation, running costs, salvage value and tax considerations.

MECH 466 Fluid Systems — Dimensionless parameters. Pump characteristics, operation and maintenance. Cavitation. Air movement and supply, fan performance and characteristics, duct sizing and networks.

OPMT 182 Operations Management — Students will be introduced to problem situations at the management level of a production organization. Each topic is introduced by lecture and continued by lab work involving practice in various solution techniques. Students are expected to produce management reports for each assignment. The topics covered are: business forecasting at the product level; inventory control including EOQ, ELS and an introduction to MRP; project control using CPM and PERT; quantitative methods including linear programming and waiting line techniques; and an introduction to business accounting and finance, including production cost accounting. All students are required to work with packaged computer programs.

OPMT 411 Production Engineering Management — Presents aspects of management and the industrial engineering functions of a manufacturing plant. It is intended for technologists, engineers, designers, draftpersons and technical sales people who wish to have a clearer understanding of the range of problems and decisions involved in a manufacturing organization. Topics include management and plant organization, plant location and layout, production control, maintenance management, production planning, job design and time standards.

PHYS 216 Physics for Mechanical Technology — A general level course covering the elements of wave motion, sound, light and basic electricity and magnetism.

TCOM 109 Technical Communication for Mechanical — In this course students learn the basic skills to become effective writers and speakers in the mechanical industry. They learn the layout, content and graphic skills of technical writing, and research and employment application techniques. They write technical memos, letters and descriptions, and give an oral report.

TCOM 210 Technical Communication for Mechanical — In this course, students practice the reporting techniques used in the engineering mechanical industries. They write feasibility reports, proposals, memos, letters, comparison and progress reports and a formal technical report. They also present an oral technical report. Prerequisite: TCOM 109.

Mechanical Systems Technology

The graduate of this program will be able to pursue a career in a field of Mechanical Systems for residential, commercial, institutional and industrial buildings. Graduates will be prepared for the design and installation of water supply, drainage, fire protection, refrigeration, heating, ventilating and air conditioning.

Job Opportunities

Mechanical engineers, working in liaison with architects, structural engineers and electrical engineers, oversee design work on systems for most large buildings. As support staff, trained mechanical systems technologists who can function with minimum supervision as designers, specification writers, field inspectors and drafting personnel, are required. Mechanical contractors bid competitively for mechanical systems work and require trained systems technologists as estimators and project management assistants.

Systems in newly completed and existing buildings have been receiving more attention in recent years. Services in this area include system management programs to optimize energy efficiency; testing and balancing of new systems; and physical changes to existing systems to realize greater fuel economy.

The Program

Course material encompasses water supply, drainage, fire protection, refrigeration, heating, ventilating and air conditioning, backed by support courses which include fluid engineering, thermodynamics, engineering economy and computer science. In recent years, the pursuit of greater energy efficiency and safety in buildings has placed new demands on the systems base from which the graduate can effectively participate in achieving these objectives.

It is anticipated that this program will be accredited by the Applied Science Technologists and Technicians of British Columbia.

Prerequisites

Algebra 12 and Physics 11 are course requirements for this program. Applicants should have a solid academic background and good communication skills, be able to apply ideas to practical situations and to work effectively with people in a team situation. Supervisory posts may be assumed after appropriate job experience.

Course Descriptions

BLDG 112 Building Construction 1 — Principles of building construction in terms of the assembly of materials. Examination of typical systems of wood and masonry construction. Study of architectural detailing and the origins and purposes of building and zoning by-laws. Application of the above components to the preparation of working drawings.

CDCM 101 Computer Science 1 — Introduction to computer science and programming using BASIC. Emphasis will be on structured problem solving. Applications drawn from the engineering disciplines.

CDCM 349 CAD Drafting 1 — Rudiments of computer aided drafting. Machine log-on procedures, simple 2-D drawings orthographic projection, dimensioning, annotations.

ELEX 256 Instrumentation for Mechanical — Topics include basic devices used for measuring pressure, temperature, level, density and flow. Instrument static and dynamic performance. Instrument application to industrial processes. Design of pneumatic and hydraulic measurement and control equipment using high-gain amplifiers and negative feedback. Basic principles of automatic control, process, dynamic behavior and controllability. On/off, proportional, integral and derivation control. Control strategy. Ratio, cascade, multivariable and feedforward systems, introduction to computer control.

ELEX 257 Electrical Equipment — An introduction to industrial electrical equipment. Topics include AC and DC motors and their applications to electro-mechanical drive systems; protecting and controlling motors; industrial electrical power systems and related equipment; sources of energy; transformation into primary and secondary voltage levels, distribution of power throughout the plant; switching; voltage control and power factor correction.

MATH 149 Basic Technical Mathematics for Mechanical — Introduction to differential and integral calculus of polynomial functions including appropriate support topics from algebra, analytical geometry, plane geometry, solid geometry, trigonometry and the theory of logarithms and exponential functions. There will be a strong emphasis on applications to the physical sciences and mechanical engineering.

MATH 249 Calculus for Mechanical — An introduction to the differential and integral calculus of trigonometric, logarithmic and exponential functions and their application, maxima and minima, areas and volumes, centroids and moments of inertia, calculation of work, bending beams, functions of several variables and partial derivatives, and elementary first order differential equations.

MATH 349 Numerical Methods for Mechanical — Numerical integration, solution of algebraic and transcendental equations by iterative methods, numerical solution of differential equations and numerical differentiation. Matrix approach to 2D and 3D transformations with application to computer graphics. Gauss-Jordan method applied to the solution of systems of linear equations. Linear programming using the simplex method and the transportation problem.

MECH 100 Mechanical Drafting 1 — Techniques of producing and reading mechanical drawings using standard format and the development of basic skills in applying these techniques. Use of instruments, line work, lettering, geometric construction isometrics, with emphasis placed on orthographic projection, auxiliary views, sections, dimensions and working drawings.

MECH 104 Statics — Vectors, force systems, concurrent and coplanar, nonconcurrent and coplanar. Graphical representation and solutions. Ideas of equilibrium. Mathematical representation of equilibrium. Analysis of frames. Statically determined structures. Redundancies. Beams, principles of moments and centroids. Second moment of area.

MECH 106 Manufacturing Processes 1 — A basic orientation course which provides the student with practice in metal removal, and a study of related theory.

MECH 107 Thermal Processes — Introduction to heat and fluid processes, steam tables, first law of thermodynamics. Basic steam power and refrigeration cycles.

MECH 206 Mechanics of Materials — Stress, strain and deflection. Tension compression, shear, torsion, deflection and buckling of material under load. Beams, columns, shafts, thin and thick-walled cylinders, riveted and welded joints.

MECH 208 Dynamics — Kinematics: basic equation of motion, motion diagrams, trajectories. Kinetics: Newton's Laws, inertia, rectilinear and rotational kinetics, systems of bodies. Work, energy power, efficiency.

MECH 302 Thermal Engineering 1 — First and second law of thermodynamics. Steady and non-flow energy equations, specific heats of gases, vapor tables, gas and vapor processes. Carnot, Rankine and basic IC engine cycles. Air compressors. Heat transfer.

MECH 303 Fluid Mechanics — Basic principles of fluid properties, energy losses, Reynold's number, Moody diagram, flow measuring devices, dynamics of flow lift and drag. Fluid statics.

MECH 320 Fluid Power 1 — Provides an understanding of pneumatic control systems. Fluid power components, their symbols, function and construction are examined and used in the design, construction and testing of simple and sequential control systems. Sizing calculations for system components are covered.

MECH 404 Thermal Engineering 2 — Mixtures of gases and vapors, Gibbs-Dalton Law, psychrometry, air conditioning, combustion processes and nozzle flow; analysis of steam and gas turbines and jet propulsion. Practical lab investigations by students.

MECH 410 Mechanical Estimating — Basic theories and principles of estimating construction costs and direction for organizing facts from bidding documents. Measurement and pricing using "price master" and "labor calculator", for ventilation, domestic hot water heating and sanitary drainage systems.

MECH 460 Engineering Economy — Emphasizes the importance of making sound economic decisions when faced with alternative methods of solving technical problems. The course material provides the basic skills and concepts required to analyze comparative costs and to understand the time value of money (interest), inflation, depreciation, running costs, salvage value and tax considerations.

MECH 466 Fluid Systems — Dimensionless parameters. Pump characteristics, operation and maintenance. Cavitation. Air movement and supply, fan performance and characteristics, duct sizing and networks.

MSYS 103 Plumbing — Topics include codes, basic engineering principles and graphic presentations related to plumbing systems design, load calculations, piping methods, sizing of system components for storm and sanitary drainage and water distribution. Some drafting skill will be required.

MSYS 200 Systems Drafting 2 — Further topics in mechanical drafting practices and projects on systems in buildings and plants.

MSYS 212 Heating and Ventilating 1 — Covers the principles involved with heat loss in buildings and practises of heating and ventilating, encompassing a study of system components and design procedures. These will then be applied to the preparation of heat loss calculations and working drawings for a heating/ventilating system.

MSYS 301 Heating and Ventilating 2 — Principles and practices of heating and ventilating for residential, commercial and institutional buildings. Instructional material encompasses fuel oil, gas and solar heat energy sources; fuel handling heating boilers; solar collectors; building heat loss evaluation; building ventilation, load evaluation; space air distribution; ducted air distributions; warm air heating.

MSYS 400 Air Conditioning Systems — Part 3 of a three-part course of heating, ventilating and air conditioning. Properties of air extending use of psychrometric chart to air conditioning comfort criteria and examination of air conditioning processes; refrigeration for air conditioning, encompassing evaporator, compressor, condensor and expansion valve performance characteristics and selection; air conditioning systems, encompassing representative unitary, constant volume and variable volume systems.

MSYS 403 System Noise Control — Lab assignments are arranged to solve fundamental problems of sound propagation; use mechanical equipment sound performance data to select equipment to satisfy acceptable noise levels; and to recognize and arrive at solutions to potential mechanical system noise problems in the design stage.

MSYS 404 Mechanical Equipment — A study of drive configurations, prime movers, fans, pumps, heat exchangers, pressure vessels from an application, specifications, maintenance and safety point of view.

MSYS 405 Maintenance — The elements of this course are basic systems, preventative maintenance and budget costs, maintenance planning, estimating, scheduling, measurement and inventory.

MSYS 406 Fire Protection — Includes mechanical fire protection systems; regulations and codes of practice; building hazard classification; stand pipe and sprinkler systems; systems components and design to NFPA 13.

OPMT 460 Industrial Engineering — Covers problem-solving and decision making approaches to a project installation. Topics include: PERT networks, CPM barcharts, work measuring techniques in planning and project installations, method study techniques, acceptable management principles in labor supervision.

PHYS 216 Physics for Mechanical — A general level course covering the elements of wave motion, sound, light and basic electricity and magnetism.

TCOM 109 Technical Communication — In this course students learn the basic skills to become effective writers and speakers in the mechanical industry. They learn the layout, content and graphic skills of technical writing, and research and employment application techniques. They write technical memos, letters and descriptions, and give an oral report.

TCOM 210 Technical Communication — In this course, students practice the reporting techniques used in the engineering mechanical industries. They write feasibility reports, proposals, memos, letters, comparison and progress reports and a formal technical report. They also present an oral technical report. Prerequisite: TCOM 109.

Plastics

This two-year diploma program commenced September 1987. The program is designed to provide practical and theoretical training in production processes used in the manufacture of plastic products in a variety of applications: packaging, coatings and adhesives, construction, electronics communications, domestic and automotive, to name but a few.

Job Opportunities

It is noteworthy that the plastics industry in Canada, and particularly in B.C., is the fastest growing secondary manufacturing industry. This tremendous growth is expected to continue on a broad scale. Graduates of the Plastics Technology program will find opportunities for satisfying and rewarding careers in manufacturing research and development, technical sales, marketing, machine setting and troubleshooting, product design inspection and quality control. It is anticipated that supervisory posts will be assumed with appropriate job experience.

The Program

Emphasis is placed on plastics processes such as compression molding, injection molding, blow molding, extrusion and film production, and related testing procedures. A study of the construction and design of plastic dies and molds and product design is strongly backed by studies in materials plastics chemistry, mathematics, technical communication, mechanical design and computer aided drafting. It is anticipated that this program will be accredited by the Applied Science Technologists and Technicians of British Columbia.

Prerequisites

Algebra 12 and Chemistry 11 or Physics 11 are course requirements for this program. Applicants should have a solid academic background and good communication skills, be able to work effectively with people, and enjoy the challenge of applying ideas to practical situations.

J.E. Pvetzlaff, Dipl.T.

Robotics and Automation

The Robotics and Automation Technology program will provide the student with knowledge of the applications of flexible automation equipment, the various mechanical systems used and the electronics incorporated for their control. Gaining "hands on experience" with a variety of industrial robots and automated machinery in a modern, well equipped, lab will be emphasized. Particular attention will be given to applying automation techniques to industries in British Columbia.

The Program

The program includes 4 equal length academic study levels of 17 weeks duration each and 2 salaried cooperative work terms during which the student can gain invaluable experience working in associated industries. Students are admitted into the first level in September only.

Cooperative Education is an integral part of the Robotics and Automation Technology. During this portion of the program, students can be placed in an industrial automation environment. These Coop placements are developed after consultation between industry and BCIT. Benefits to the student are:

1. The student receives training in the classroom and the workplace, a need expressed by industry due to accelerating changes occurring in technology.
2. Valuable experience is gained in the automation industry, making the student much more employable upon graduation.

Transfer credit from the Robotics and Automation Technology to Universities is possible, on an individual basis.

Prerequisites

Algebra 12 and Physics 11, both with C+ or better are required for this program.

PROGRAM: Robotics and Automation

Level 1	(September — January)	Clim hrs/wk
ELEX 100	Circuit Analysis 1 (DC circuits)	6.0
ELEX 102	Digital Techniques 1	5.0
ELEX 201	PASCAL	4.0
MATH 134	Technical Math for Robotics Technology	6.0
MECH 106	Manufacturing Processes 1	4.0
PHYS 108	Physics for Robotics Technology	5.0
TCOM 104	Technical Writing for Electronics	3.0
	Library and Research	
Level 2	(February — May)	
ELEX 200	Circuit Analysis 2 (AC circuits)	5.0
ELEX 202	Digital Techniques 2	6.0
ELEX 203	Electronic Circuits 1	7.0
MATH 234	Calculus for Robotics	6.0
MECH 211	Manufacturing Processes 2	4.0
PHYS 208	Applied Physics for Robotics Technology	5.0
	Library and Research	

Level 3	(September — January)	Clim hrs/wk
ELEX 341	Electronics for Interfacing	6.0
MATH 334	Transform Calculus for Robotics	4.0
MECH 320	Fluid Power 1	3.0
ROBT 301	Robot Applications	7.0
ROBT 302	Automation Equipment	5.0
ROBT 303	Microprocessors and Interfacing	6.0
	Library and Research	
Level 4	(February — May)	
ELEX 460	Feedback Systems	6.0
MECH 421	Fluid Power 2	4.0
OPMT 183	Industrial Engineering for Robotics	4.0
ROBT 401	Robot Sensors	5.0
ROBT 402	Computer Integrated Manufacturing	6.0
ROBT 403	Project	4.0
TCOM 214	Technical Writing for Electronics	3.0
	Library and Research	

Course Descriptions

ELEX 100 Circuit Analysis 1 (DC Circuits) — Teaches the principles and methods of analysis related to DC circuits. Topics include SI units and terminology, voltage, current, work, energy, power and resistance. Methods of analysis include mesh, superposition, nodal, Thevenin and Norton. Transients, in RC and RL circuits are analyzed. Labs are synchronized with lectures so that theory is studied and confirmed by application.

ELEX 102 Digital Techniques 1 — Begins with a description of the fundamental theory of the Decimal and Binary number systems. Then introduces the Binary (two states or levels) concept followed by the description of binary variables as related to mechanical switches. Various digital logic circuits are discussed and their truth tables and Boolean output equations are generated. Various logic sources are defined and interfaced to combinational logic circuits comprising of electronic logic gates. A TTL data book will be utilized to facilitate combinatorial logic circuit design. Boolean identities and Karnaugh mapping will be used to minimize algebraic expressions. Combinational digital log will be designed and constructed implementing NAND and NOR gates using their proper Demorgan's equivalent logic symbols (Duality of Gates). Encoders and Decoders will be introduced if time permits.

ELEX 200 Circuit Analysis 2 (AC Circuits) — Introduces the behavior of electrical circuits and networks when driven by a single-phase alternating current (AC) source; preparation for courses in electronics and power systems. The course includes the sine wave, average and effective values, power and power factor; resistance, capacitance and inductance as elements in single-phase AC circuits; phasor diagrams, impedance, admittance, voltage, current and power diagrams; analysis of AC circuits with complex algebra; resonance and resonant circuits, high and low pass filters; the application of circuit laws and theorems to single-phase AC circuits, coupled circuits. The circuit theory is verified using multimeters, sine wave generators, amplifiers and dual trace oscilloscopes.

ELEX 201 PASCAL — Introduces microcomputer use, DOS operating system, programming languages, compilers and interpreters. The IBM personal computer is used throughout this course for interactive student training. The main part of the course covers PASCAL programs for engineering applications. Students will also learn to document and debug software, and to utilize available software libraries.

ELEX 202 Digital Techniques 2 — Studies the utilization of logic circuits. TTL family specifications including noise margins, loading and propagation delays. Interfacing of various digital circuits, encoding and decoding of numbering systems and digital arithmetic, sequential logic, flip flops, counters and shift registers. Also included are frequency counters, digital multiplexing and memories.

ELEX 203 Electronic Circuits 1 — Explains how electronic circuits work, how to analyze, design, modify and combine them to perform complex functions. Topics include interpretation of bipolar and field-effect transistor characteristic curves; voltage and current amplifying circuits; the transistor as a switch; loadline analysis; choice of Q-point; bias circuits; equivalent circuits; frequency response, feedback, oscillation response; oscillator circuits; power amplifiers of various types; heat sink calculations; DC power supplies and characteristics and application of switching devices.

ELEX 341 Electronics for Interfacing and Signal Conditioning — Examines the application and design of precision analog circuits to interface and signal conditioning systems. Topics include the specification, design and evaluation of amplifier systems commonly used in transducer interfacing applications, high accuracy and stability signal conditioning design techniques and analog signal transmission and multiplexing systems with emphasis on the 2-wire current loop. A strong practical approach is ensured by relevant lab exercises and projects. Prerequisite: ELEX 203

ELEX 460 Feedback Systems — An introduction to linear feedback theory and practice as applied to servomechanisms — motor position and speed control. Block diagram transfer functions are developed for steady state systems. Bode and Root-Locus frequency analysis are used to evaluate control system performance. The second half of the course replaces the analog controller with a microprocessor and investigates the area of sample data control.

MATH 134 Technical Math for Robotics Technology — Trigonometric functions, identities, solution of triangles graphing and addition of sinusoidal functions. Complex numbers, rectangular/polar transformations, phasor representation of sinusoidal waveforms. Common and natural logarithms, logarithmic/semilogarithmic graphs, decibels, exponential growth and decay. Systems of linear equations, determinants, application to electrical networks.

MATH 234 Calculus for Robotics — The derivative, differentiation rules, applied maxima/minima and implicit differentiation with applications to electrical technology. Antidifferentiation, the indefinite integral and the definite integral including area, mean value and RMS value. Differentiation and integration of trigonometric, logarithmic and exponential functions. Prerequisite: MATH 134.

MATH 343 Transform Calculus for Robotics — Fourier series, evaluation of Fourier coefficients and line spectrum. Numerical harmonic analysis. First and second order differential equations with application to robotics technology. Step and impulse functions. Laplace transforms of functions and mathematical operations. Partial fractions. Inverse Laplace transforms. Solutions of differential equations. Solutions of applied problems appropriate to the robotics technology.

MECH 106 Manufacturing Processes 1 — A basic orientation course which provides the student with practice in metal removal, and a study of related theory.

MECH 211 Manufacturing Processes 2 — Evaluation of machine tool operations, organized processing, break even points and equal cost quantities, productivity and cost estimating. Machine tool specifications, installation and maintenance, testing and evaluation, production welding processes and techniques. Prerequisite: MECH 106.

MECH 320 Fluid Power 1 — Provides an understanding of pneumatic control systems. Fluid power components, their symbols, function and construction are examined and used in the design, construction and testing of simple and sequential control systems. Sizing calculations for system components are covered.

MECH 421 Fluid Power 2 — Provides an understanding of hydraulic control systems and an introduction to fluidic control systems and control logic. Fluid power components, their symbols, function and construction are examined and used in the design, construction and testing of a variety of hydraulic control systems. Sizing calculations for system components are also covered.

OPMT 183 Industrial Engineering for Robotics — Surveys the general background to operations management in terms of planning and organizing manufacturing operations. Topics include facility location and layout, methods improvement and production/inventory management.

PHYS 108 Physics for Robotics Technology — This general physics course emphasizes topics of special relevance to robotics. Part 1 introduces measurement and data analysis. Part 2 covers basic mechanics, including static equilibrium, work, energy, power, torque and rotational motion. Part 3 covers mobility. Part 4 covers semiconductor physics including the theory, construction and operation of semiconductor devices.

PHYS 208 Applied Physics for Robotics Technology — This general physics course emphasizes topics of special relevance to robotics. Part 1 covers magnetism and electromagnetism with applications in robotic pickup systems and stepping motors. Part 2 covers hydraulics and fluid flow. Part 3 covers thermal energy and thermodynamics. Part 4 covers advanced mechanics with special emphasis on mechanical properties of matter, 3-D force systems, stress and vibrations. Parts 4 and 5 cover waves, sound and optics with related applications. Part 6 introduces radiation and radiation hazards related to robotics. Prerequisite: PHYS 108.

ROBT 301 Robot Applications — Discusses various robot configurations, the coordinate systems in which they operate and the kinematics of robot motion. Investigates specifications such as accuracy, repeatability and load capability and their importance in various applications.

ROBT 302 Automation Equipment — Covers the basic principles of generators and the construction, speed-torque characteristics, braking conditions and speed control of permanent magnet DC motors. The course will also cover the operation and control of brushless DC motors and stepper motors.

ROBT 303 Microprocessors and Interfacing — Investigates the software and hardware involved in the real-time control of a microprocessor based system. Topics include microprocessor architecture, assembly language programming, input/output operations, interrupt handling and interfacing techniques used between a computer and an automated controller. Troubleshooting techniques used in fault analysis are taught.

ROBT 401 Robot Sensors — Investigates various methods of interfacing real world systems to a digital computer through the use of analog-to-digital and digital-to-analog converters. Machine vision and object recognition, tactile force sensors, and range finding and navigation techniques using proximity sensors are studied.

ROBT 402 Computer Integrated Manufacturing — Teaches the use of a microcomputer based Computer Aided Design system. Programming the operation of Computer Numerical Control machine tools using manual and computer assisted methods is also covered in depth. The integration of Computer Aided Design and Manufacturing is investigated.

ROBT 403 Design Project — A graduation project researched and presented by the student on some aspect of automated technology. Students will give written and oral presentations on their proposed and completed designs.

TCOM 104 Technical Writing for Electronics — Emphasizes clear, correct, concise technical writing in the electrical/electronics field. Students learn how to organize technical information, illustrate documents, define and describe technical objects and processes, write routine letters, memos and instructions, and summarize technical articles. Students also write a resume and application letter for Coop.

TCOM 214 Technical Writing for Electronics — In this course students prepare a professional job search package, practise interviewing skills, and write informal reports. They also learn techniques and formats for writing documentation and prepare and deliver technical briefings.

METAL INDUSTRY TRAINING

**Boilermaker
Ironworker
Sheet Metal Worker
Steel Fabricator
Welder**

Boilermaker (ELTT)

A boilermaker possesses the full range of knowledge and skills required to fit, install, assemble, erect, repair and maintain a wide variety of vessels, tanks, towers, hoists and other structures; as well as ancillary equipment and fixtures made of metal and fiberglass materials.

The Program

Training will prepare students for entry-level employment as boilermakers (erectors). Basic theory and related information along with hands-on shop practice will enable students to become competent in basic vessel construction tasks. Upon successful completion of the program, students may wish to work towards journeyed status in the trade by seeking employment as an apprentice.

Program Content

Describe the boilermaker trade
Apply safe and acceptable work habits
Trade mathematics
Blueprint reading/sketching
Metallurgy fundamentals
Develop patterns, make templates for objects
Nondestructive testing
Describe business/industrial organizations; prepare for employment
Identify, select, use and maintain tools and equipment
Identify, select and use metal fabrication equipment
Apply oxyacetylene burning techniques
Apply arc welding techniques
Apply rigging
Apply lifting equipment
Apply layout and fitting techniques
Fabricate and erect tanks
Fabricate and erect boiler components
Fabricate and erect hydro components
Assemble and dismantle refinery components
Apply fiberglass reinforced plastics

Length of Program

Approximately 6 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1345

Prerequisites

- a. Must be able to work at heights. Good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.
- b. Anyone over 16 who meets the following requirements may apply.
Either:
 1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

Graduates of this program are eligible for acceptance into the boilermaking union. Apprenticeships are arranged through the union which dispatches workers to job sites throughout B.C. and the Yukon. Possible work sites include pulp mills, refineries and dams.

Instructor

Joe Kiwior

Ironworker (ELTT)

A structural ironworker is a member of a group that raises structural steel girders, plates and columns, and joins them permanently to form a framework or a completed structure. Work is usually broken down into various phases with separate gangs, such as the raising gang or the high tensile bolt gang. The workers are usually interchangeable on all phases of work except welding, an activity which requires additional training. Workers within the gang are usually designated according to the work they do: bolter-up, connector, hooker-on or rigger.

The Program

Training will prepare students for entry-level employment in the ironworking trade. Basic theory and related information along with hands-on shop and field practice will enable students to become competent in basic ironworking activities. Upon successful completion of the program, students may wish to work toward journeyed status in the trade by seeking employment as an apprentice.

Program Content

- Apply safe and acceptable work practices
- Mathematics
- Sketch and read drawings
- Prepare for employment
- Use basic measuring, layout and hand tools
- Use metalfab power tools
- Metallurgy fundamentals
- Use oxyacetylene and fit structural shapes
- Arc welding
- Apply rigging
- Use cranes and derricks
- Structural steel erection
- Select reinforcing steel

Length of Program

Approximately 6 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1345

Prerequisites

- a. Must be able to work at heights and in adverse weather. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.
- b. Anyone over 16 who meets the following requirements may apply.
 - Either:
 1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;
 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

With the downturn in the construction industry, unionized opportunities in this trade are not good at this point. However, some activity is expected in the non-union sector. Those who cannot find apprenticeships should be prepared to take entry level jobs in the industry until job opportunities improve.

Instructor

Nino Romanin

Sheet Metal Worker (ELTT)

A sheet metal worker fabricates, assembles, alters and installs a variety of sheet metal products. Typical jobs performed by a sheet metal worker include:

- air conditioning system ductwork
- hospital and kitchen equipment (stainless steel)
- industrial exhaust systems
- industrial sheet metal work
- skylight work (copper)
- roofing and flashing (copper, aluminum, stainless steel)

The Program

Students are prepared for entry-level employment in the sheet metal industry. Basic theory and related information along with hands-on shop practice will enable students to become competent in fabricating basic sheet metal products. Upon successful completion of the program, students may wish to work towards journeyed status in the trade by seeking employment as an apprentice.

Program Content

Use safe work practices
Solve mathematical problems
Apply science concepts
Sketch and read drawings
Process technical information
Use basic measurement and layout tools
Use power tools and shop equipment
Lift and support loads
Oxyacetylene cut and weld
Arc welding
Use fasteners and fittings
Use materials
Make seams and edges
Apply riveting techniques
Use sheet metal hand operated machines
Develop patterns using parallel line development
Develop patterns using radial line development
Develop patterns using triangulation development
Construct a blow-pipe project
Construct a stainless steel project
Construct a ventilation project
Prepare for employment

Length of Program

Approximately 6 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0730-1430

Prerequisites

- Must be able to work at heights. Good physical condition is desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.
- Anyone over 16 who meets the following requirements may apply.

Either:

1. Submit documentation that you have one of the following:

 - Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
 - Journeyman standing in a related trade;
 - Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

There has been some improvement in job opportunities in this trade in the area of ventilation and air conditioning. However, apprenticeship opportunities are not strong at this point, and graduates should be prepared to take any entry level jobs available in the industry.

Instructors

Gord Bradbury, Chief Instructor
Ted Kondo
Dave Stewart

Steel Fabricator (ELTT)

A steel fabricator deals with the selection, layout, shearing, cutting (with a torch), punching, drilling, forming, fitting and welding of steel plates and structural steel shapes into products for the forest, mining, construction, transportation and agricultural industries. Typical projects that would involve a steel fabricator include: bridges, buildings, hoppers, conveyors, towers, cranes, heavy mining equipment, logging equipment, ship parts and equipment.

The Program

Training will prepare students for entry-level employment as steel fabricators. Basic theory and related information along with hands-on shop practice will enable students to become competent in basic steel fabrication methods for products such as steel buildings, tanks, equipment. Upon successful completion of the program, students may wish to work towards journeyed status in the trade by seeking employment as an apprentice.

Program Content

Describe safe work practices
Solve mathematical problems
Sketch and read drawings
Describe business and industrial organizations and prepare for employment
Erect ladders and scaffolds
Describe the properties of metals
Use common steel fabrication fasteners
Lift loads
Use steel fabrication hand tools
Use steel fabrication portable power tools
Clean and prepare metal surfaces
Read and interpret steel fabrication drawings
Describe patterns for shop fabrication
Make templates for shop construction
Cut and weld with oxyfuel equipment
Use arc welding equipment
Use steel fabrication shop equipment
Fabricate projects

Length of Program

Approximately 6 months. However, students may be allowed to proceed through as quickly as they are able to master the skills, or allowed up to 20% additional time (at additional cost) to complete the program.

Normal Course Hours: 0700-1345

Prerequisites

- a. Good hand/eye coordination and good physical condition are desirable. Potential students with medical or physical difficulties should contact Student Services to arrange an interview (telephone interview if out of town) with the Institute's Special Needs Counsellor, (604) 434-3304.
- b. Anyone over 16 who meets the following requirements may apply.
Either:
 1. Submit documentation that you have one of the following:
 - Successful completion of Career Preparation from a B.C. secondary school within the past two years;

- Successful completion of a portion of TRAC training from another B.C. post-secondary institution within the past three years;
- Journeyman standing in a related trade;
- Completion of one English and one Math course within the past three years with the stipulated mark as listed below.

Math

Math 10 with a B letter grade
Trades Math 11 with a B
Consumer Math 11 with a B
Algebra 11 with a C
Algebra 12 with a P

English 10 with a B letter grade
English 11 with a C
Composition 11 with a C
Communications 11 with a C
English 12 with a P
Communications 12 with a C
Literature 12 with a P

OR:

2. Pass an entrance test measuring math and reading skills.

Note: Those with only minor deficiencies will be admitted but will be required to complete remedial upgrading at BCIT as part of the program. Those who have major deficiencies will be referred to other institutions for upgrading and, after successfully rewriting the entrance tests, may apply to Student Admissions to resume their original place on the Institute's waiting list.

Accommodation

For assistance in finding suitable accommodation, contact the BCIT housing office at (604) 432-8677.

Financial Aid

There is an improved financial aid program for trades training. Attend a one hour information session at BCIT held every Friday at 1330 hours. Make an appointment for the financial aid information session by phoning Student Services, (604) 434-3304.

Applicants may also wish to contact their local Canada Employment Centre regarding sponsorship.

Career Potential

With the continuing weakness of the construction industry, there are more opportunities in the industrial sector of this trade at present (usually in town). Graduates should be prepared to start as labourers or trainees if apprenticeships are not available. Those who gain enough experience on the job may be eligible to write the Trades Qualification (T.Q.) examination.

Instructors

Gary Blidook, Chief Instructor
Noel Bacchus
Gil Cooper
Terry Subtelny

Welding

The Programs

The three welding programs, (Level C, B and A) provide the training required for Provincial Welder certification.

Each of these qualification levels is followed by a job experience requirement to be completed before certification can be awarded through the **Employment Training Branch of the B.C. Ministry of Labour.**

Welding programs are available on three shifts.

- 1st shift 0700 - 1330
- 2nd shift 1300 - 1930
- 3rd shift 1530 - 2200

Level C Program

This program is designed to develop the fundamental skills and knowledge required for initial employment in the welding industry.

P = Practical Module

RK = Related Knowledge Module

Level C Modules/Courses

- P1 Safe work practices
- P2 Oxyfuel gas cutting
- P3 Gas welding and braze welding
- P4 Shielded metal arc welding 1 (SMAW 1)
- P5 Carbon arc gouging (AAC)
- P6 Gas metal arc welding (GMAW 1)
- Flux core arc welding (FCAW 1)
- RK1 Material handling
- RK2 Blueprint reading 1
- RK3 Welding metallurgy 1

Level B Program

This program develops more advanced welding skills and related theory than were taught in the Level C program, i.e., pipe welding, gas tungsten arc welding process, etc., providing graduates with a broader base of skills and resulting employment opportunities.

Level B Modules/Courses

- P7 Shielded metal arc welding 2 (SMAW 2)
- P8 Gas metal arc welding 2 (GMAW 2)
- P9 Flux cored arc welding 2 (FCAW 2)
- P10 Gas tungsten arc welding (GTAW 1)
- RK6 Blueprint reading 2
- RK4 Welding quality control and inspection procedures
- RK5 Welding code standards and specifications
- RK7 Welding Metallurgy 2

Level A Program

This program develops more advanced welding skills and related theory than were taught in the Level C and B programs, i.e., pipe welding with stainless steel electrodes, more advanced blueprint reading and welding metallurgy, etc. Completion of this program along with the required work experience modules should provide the graduate with the broadest base of skills and employment opportunities in our diverse metal joining industries.

Level A Modules/Courses

- P11 Shielded metal arc welding 3 (SMAW 3)
- P12 Gas Tungsten arc welding 2 (GTAW 2)
- RK8 Metallurgy 3
- RK9 Blueprint reading 3

Upgrading Options (or C, B, A and Options)

This program of training and testing options is intended to advance welders who possess basic welding skills and who now want to achieve a higher level of competency and specialization in order to meet most of the certification requirements of industry and welding code governing agencies.

Content

- Level C, B and A performance challenge tests**
- Canadian Welding Bureau (CWB) procedural tests*
- A.S.M.E. — M.O.L. prequalified welding procedure tests*
- Company and/or manufacturers' performance tests*
- Welding process upgrading
- General brush-up of skills
- Any individual module* from Levels C, B, or A of the B.C. registered welder training programs

* See modules/courses listed under the Level C, B and A programs.

Length of Program

- Level C — Up to 7 months
- Level B — Up to 4 months, depending on number of modules required
- Level A — Approximately 2 months, depending on number of modules required
- Upgrade options — Varies as to individual requirements and goals

Prerequisite

Level C

Completion of Grade 10 recommended but an appropriate combination of work experience and education will be considered.

Level B

Completion of the BCIT Level C program or other training equivalent to the Level C Institutional/College training component of the Provincial Registered Welder Program. (Completion of the Level C job experience is not an entrance requirement).

Level A

Completion of the BCIT Level B program or other training equivalent to the Level B Institutional/College Training component of the Provincial Registered Welder Program. (Completion of the Level B job experience is desirable but is not mandatory as an entrance requirement).

Note: Completion of the Gas Tungsten Arc Welding 1 course in Level B program or its equivalent is a prerequisite to Gas Tungsten Arc Welding 2 course.

Welding Upgrade (or C, B, A and Options)

This program is offered on a continuous intake basis **where spaces will be filled as they become available**. Applicants must be welders currently or recently employed in the field of welding.

- * A letter of approval for welding test may be required for company/union welding tests
- ** A letter of approval is also required from Apprenticeship Training Branch for level C, B and A challenge performance tests.

Career Potential

Nearly every industry employs welders. Most of our graduates find work in such diverse work places as metal fabricating shops, general repair shops, new construction sites, mining, logging, ship building, and oilfield camps.

Welding Applied Processes

Training in the following processes is available by request. All inquiries should be directed to the Welding Department office for course costs and dates.

- Submerged arc welding
- Automated welding systems
- GTAW of titanium alloys
- Downhill pipeline

Continuing Education Courses

A number of introductory courses in welding are available through the Part-time Studies Department. Credit transfer from these courses can be arranged when enrolling in Welding Upgrade Options.

Instructors

- Larry Cox, Chief Instructor
- Jim Black, Chief Instructor
- Don Becker
- Frank Bertalan
- Fred Bettis
- Ray Holroyd
- Elif Iverson
- George Jones
- Don McRae
- Al Pasichnyk
- Mark Rigby
- Eric Sukkel
- Eric Waterfield

PROCESS TECHNOLOGIES AND TRADES

Wood Products Manufacturing

Biological Sciences

Biological Sciences Technology offers a variety of secure and worthwhile career possibilities encompassing indoor and outdoor work in large or small-scale settings. Food processing offers stable employment, even during unsettled economic conditions, since this industry is tied to population growth. Those with a concern for their environmental surroundings may gravitate towards landscape horticulture. Others may be interested in bioengineering, an important and challenging breakthrough in the twentieth century which makes use of such modern tools as gene splicing, protein engineering and cell fusion.

The Programs

The first term of the Biological Sciences Program provides students with a general background before they proceed to one of three options: Bioengineering, Food Processing, or Landscape Horticulture. Programs and options in the Biological Sciences Technology are accredited by the Applied Science Technologists and Technicians of B.C. (Except for Bioengineering which will be submitted in the near future.)

Job Opportunities

Bioengineering graduates will be employed by biological research laboratories, chemical process industries, food and alcoholic beverage fermentation industries, pharmaceutical manufacturers, mining laboratories and horticultural and forest nurseries involved in the cloning of plants.

Graduates in the **Food Processing Option** find employment in the food manufacturing industry where they may perform chemical, physical and bacteriological tests on food materials during processing and on packaged goods, or they may supervise manufacturing processes within the plant. Other opportunities are found in government laboratories and inspection services.

Landscape Horticulture Option graduates are employed with landscape contractors, greenhouses, nurseries, parks and recreation systems, landscape architects and planners.

Prerequisite

Algebra 12 and Chemistry 11 are course requirements for the Biological Sciences programs.

Course Descriptions

ADMN 103 Fundamentals of Management — Gives students an appreciation of the application of management principles and business techniques. Students are given an opportunity to develop their skills, using lecture material, by analyzing typical business problems and proposing and discussing problem solutions. Subjects covered include planning, organizing, leadership, control and financial management.

BISC 102 Introductory Microbiology — Designed to train students in the basic microbiological procedures employed in a laboratory: use and care of the microscope, staining methods, aseptic techniques, methods of identifying micro-organisms.

BISC 103 Biology — A study of the principles underlying living phenomena including the organizational attributes of living matter. Evolutionary development is traced from one-celled organisms to higher plants and animals. The economic importance of various classes of plants and animals is included.

BISC 201 Food Processing — An introduction to the principles and processes of canning, freezing, dehydrating and fermentation of foods. The use of salt, sugar and additives to preserve food. The importance of packaging of foods. Experimental portions of food will be preserved by various methods during lab periods. Prerequisite: BISC 102, CHEM 103.

BISC 202 Microbiology for Food Processing — The application of microbiology to food manufacturing. The isolation of micro-organisms significant to food processing for the purposes of differentiation and classification. Maintaining high bacteriological standards in processed foods. Shelf-life studies, spoilage control, food fermentations. Assessing microbiological test results and report writing to management. Prerequisite: BISC 102.

BISC 205 Introductory Botany and Soils — Plant morphology and physiology, with particular reference to ornamental and horticultural plants, soil types and introduction to soil testing. Culture and management of ornamental and recreational turf grass. Prerequisite: BISC 103.

BISC 206 Horticulture 1 — The principles of environmental control and plant response. Basic greenhouse and plant propagation techniques. Principles of plant taxonomy and nomenclature. Recognition and use of woody species found in the landscape. Prerequisite: BISC 103.

BISC 220 Microbiology for Bioengineering — The application of microbiology to biotechnology. The uses of micro-organisms including bacteria, molds, yeasts and fungi, to produce products of commercial importance. The physiological manipulation of micro-organisms will be discussed.

BISC 221 Biotechnology Fundamentals — A survey of all aspects of biotechnology including the ethical and legal implications of this technology. Topics include fermentation, bioreactors, single cell protein, recombinant DNA, monoclonal antibodies and enzymology.

BISC 301 Food Processing — The study of food manufacturing processes in the fish, meat, fruit and vegetable, cereal, dairy, beverage and confectionery industries. Principles and techniques of proper handling and preservation of products in these industries will be emphasized. The use of ingredients such as sweeteners, flavorings, coloring and preservatives will be discussed. Prerequisite: BISC 201.

BISC 302 Nutrition for Food Processing — A study of the nutrients found in food, their importance, metabolic function and dietary requirements. The selection of diets to meet varied nutritional needs. The relationship of nutrition and health. Nutritional labelling. The effect of processing on the nutritional quality of foods. Prerequisite: CHEM 103, CHEM 203.

BISC 303 Quality Control — An assessment of food quality. Responsibilities and organization of a quality control department in the food industry. Statistical procedures for sampling. Federal and provincial government regulations. An introduction to tri-stimulus colorimetry and measurement of color in foods. Prerequisite: MATH 244.

BISC 304 Introductory Food Analysis — An introduction to the theoretical and practical aspects of sampling and sample preparation. The proximate analysis of foods and biological materials. An introduction to carbohydrate and protein chemistry with selected analyses, using the best equipment available. Prerequisite: CHEM 103, CHEM 203.

BISC 305 Engineering Principles for Bio Science — The acquisition of process materials, heat transfer, mixing, bioreactor/fermenter design. Product separation systems used in biotechnology and food processing systems will be discussed.

BISC 306 Horticulture 2 — Diverse methods of plant propagation are covered including seed collection, extraction and stratification. Seed bed preparation and growing media. Asexual propagation of selected species by cuttings, grafting and budding. Micropropagation and tissue culture. Hydroponic culture systems. Prerequisite: BISC 205, BISC 206.

BISC 310 Landscape Mechanics — A study of basic engineering principles as applied to landscape construction and maintenance equipment, irrigation and drainage systems, nursery and greenhouse systems. The application of micro-computers to landscape and greenhouse systems. Prerequisite: PHYS 102, PHYS 202.

BISC 311 Nursery Crop Production — Field and container culture of nursery plants. Nursery stock specifications. Site selection and layout. Growing structures and equipment. Prerequisite: BISC 103, BISC 206.

BISC 312 Landscape Techniques — History and principles of landscape design. Inventory of client requirements. Site analysis. Preparation of working drawings, bidding and contract documents. Prerequisite: BLDG 217.

BISC 313 Advanced Plant Identification — A continuation of the plant identification studies begun in BISC 206, with particular reference to the species and cultivar level. The use of plants in the landscape. Students must present a plant collection as part of the course requirement. Prerequisite: BISC 103, BISC 206.

BISC 321 Laboratory Operation — Laboratory safety procedures for biohazardous and chemical agents. Procedures for ordering and analyzing laboratory supplies and equipment. Inventory control.

BISC 322 Molecular Genetics — Introduction to genetics viewed from the molecular level. Topics include Mendel's Laws, gene replication, recombinant DNA and the exploitation of genetics in agriculture, medicine, pharmacology and food.

BISC 323 Applied Botany — Plant processes and their manipulation by environmental factors. Plant physiology. Application of various plant propagation and culture techniques with reference to representative crops.

BISC 324 Biochemistry — The principles of biochemistry as found in cellular respiration, protein, lipid and steroid synthesis. Classification of enzymes. Co-ordination of metabolism.

BISC 401 Food Processing — see BISC 301. Prerequisite: BISC 301.

BISC 402 Process Systems for Bio Science — Dehydration, packaging, fluid and solids handling systems, utilities. Plant layout and design. Waste management. Instrumentation for process control.

BISC 403 Quality Control — The sensory evaluation of food; facility design, selection of taste panels; statistical analysis of data; laboratory measurement of consistency and texture of foods; recording and reporting with control charts; evolutionary operations. Prerequisite: BISC 303.

BISC 404 Food Analysis — An introduction to the chemistry of fats and oils. Practical laboratory analysis of lipids, vitamins and minerals using the latest equipment available. Prerequisite: BISC 304, CHEM 311.

BISC 406 Sanitation — Microbial aspects of industrial sanitation. Properties of good detergents and sanitizers. Government regulation. The use and storage of toxic materials. Approved water supply. Industrial practicums. Prerequisite: BISC 102, BISC 202.

BISC 410 Plant Protection — The morphology and identification of weeds, diseases and insects. Life histories of representative species. Strategy of control by cultural, biological and chemical means. Currently recommended pesticides are reviewed. Pesticide safety, pest and pesticide legislation. Students are examined under the provisions of the "Pesticides Control Act" for pesticide applicator and pesticide dispenser certificates. Prerequisite: BISC 103, CHEM 217.

BISC 411 Soil Technology — The origin, formation and classification of soils; use of survey reports, map interpretation. Components of soils, soil colloids, cation exchange, reactions, soil acidity, phosphorus, nitrogen, the crop as an indicator of fertility, soil organic matters, fertilizers. Soil sampling procedures, extraction methods used in soil analysis. Prerequisite: BISC 205.

BISC 412 Landscape Techniques — see BISC 312. Prerequisite: BISC 312.

BISC 413 Landscape Field Practices — Arboricultural techniques and practices. Pruning, transplanting, tree values, maintenance schedules. Prerequisite: BISC 306, BISC 312, BISC 313.

BISC 414 Supervisory Practices — This course provides an understanding of effective supervisory practices and of organizational behavior. Knowledge of labor laws, legal and tax information and government regulations is gained as well as management of resources for improved performance.

BISC 417 Silviculture and Forest Nurseries — An introduction to silviculture as practised in B.C., with emphasis on artificial regeneration of disturbed sites using planting stock. A review of stock types used in the regeneration process, their characteristics and methods of production and an analysis of the field conditions under which each might be used. Prerequisite: BISC 306, BISC 311.

BISC 420 Industrial Microbiology — The use of micro-organisms to produce marketable products. Bioreactors and other systems for alcoholic beverages, milk products, organic chemicals, pharmaceuticals, etc., will be discussed. Biomass as raw material for production of alcohol, methane, etc., used for fuel.

BISC 421 Enzyme Technology — Enzyme classification and properties. Selection and purification of enzymes. Immobilized enzyme systems. Enzyme probes. Industrial applications. Laboratories will employ the use of enzymes including the ELISA method to perform determination of a variety of biological constituents with great sensitivity and specificity. A U-V spectrophotometer is used in this course for reading results.

BISC 422 Cell and Tissue Culture — Micropropagation of plants by tissue culture and in vitro techniques. Animal cell culture and the production of monoclonal anti-bodies.

BISC 423 Biotechnology Applications — Specific applications of biotechnologies to various industries such as pharmaceuticals, chemical processing, food and agriculture, mining, forestry, etc. Part of the laboratory will consist of directed studies where students will select topics in biotechnology or engage in industry work under faculty supervision and present reports.

BLDG 117 Landscape Drafting — Fundamentals of drafting. Development of drafting skills using projects based on landscape structural details such as concrete slabs, steps, retaining walls and planters, as well as wood benches, fences and walls.

BLDG 217 Landscape Drafting — Continuation of BLDG 117. Further development of drafting skills using projects based on masonry, post and beam, and concrete deck construction.

CHEM 103 Applied Chemical Principles 1 — An introductory course on basic inorganic chemistry. Topics include; chemical bonding, stoichiometry, formula writing, solution preparation, oxidation and reduction, acid-base theory, titration calculations and buffer solutions. Laboratory exercises consist of qualitative and quantitative analysis. Good laboratory techniques are emphasized.

CHEM 203 Applied Chemical Principles 2 — A continuation of CHEM 103. Topics include theory of gravimetric and volumetric analysis, simple physical chemistry and organic chemistry. Selected organic topics such as carbohydrates, fats and oils which are applicable to the bio-science technology are discussed in detail. Laboratory exercises consist of quantitative and qualitative analysis and organic separations. Prerequisite: CHEM 103.

CHEM 217 Applied Chemical Principles — A continuation of CHEM 103 with emphasis on application to landscape horticulture. Topics discussed include soil chemical structures, ion-exchange, PH, solubility and redox effects, soil amenders, fertilizers and pesticides. Basic organic chemistry is introduced. Prerequisite: CHEM 103.

CHEM 311 Instrumental Analytical Methods — Instrumentation used for chemical analysis. The theory, construction, application and operation of instrumentation is discussed. Instruments include: spectrophotometry (visible, UV, NIR and infra-red, emission, absorption), flame photometry, chromatography (gas, liquid, high pressure liquid). Laboratory exercises involve use of these instruments.

CHEM 403 Instrumental Analysis 2 — Specialized instrumentation used for biotechnology will be taught to small groups.

CIVL 442 Land Engineering — An introduction to the behavior of earth and land surfaces and engineering materials under various natural conditions. Included are foundation loads, settlements and bank stability of various soil types and the occurrence and flow of water under and above ground. By means of a project, the student learns to assess runoff flows through hydrological methods, designs a retaining dam for a recreational site complete with inlet and outlet flood-control structures, and estimates quantities for construction purposes.

ELEC 253 Instrumentation for Bio Sciences — An orientation course for the food processing option covering the principles and practices of instrumentation, measurement of pressure, level, temperature and flow, and an introduction to negative feedback and automatic control systems.

MATH 144 Basic Technical Mathematics — Exponential/logarithmic theory and transformations, common and natural logarithms, logarithmic/semilogarithmic graphs. Variation, straight line equation, curve fitting. Delta-process, the derivative, differentiation rules, curve sketching, applied maxima/minima, the differential, anti-derivatives, indefinite integral, definite integral with area under a curve. Introduction to computing using BASIC.

MATH 244 Statistics 1 and 2 — Organization and graphical presentation of data, frequency distributions and measures of central tendency, variation and other measures. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Method of least squares, regression and correlation including related estimation and hypothesis tests.

MATH 444 Introduction to Computing — BASIC formatted output, arrays, subroutines, plot routines and files. Spreadsheets and case study.

OPMT 163 Management Engineering 1 — The techniques of management problem-solving and work simplification, with particular application to engineering and industrial organization. Includes method study, some measurement technique, layout, planning and scheduling. The course emphasizes practical applications to the field of biological sciences.

OPMT 444 Operations Management for Bioengineering — The use of the computer with data base, spreadsheet and integrated programs. The use of computers in the laboratory for data acquisition and control. Interpersonal relationships and management in the laboratory.

PHYS 102 Physics — An introductory level course covering a wide range of physical principles, with emphasis on areas of popular interest and special relevance to the biological sciences technology. Topics covered in first term include kinematics, dynamics, friction, statics, energy, power, circular motion, momentum, elasticity and fluid mechanics. Topics covered in second term include temperature, heat, calorimetry, kinetic theory, heat transfer, basic electricity and magnetism, colorimetry, optics relativity and radiation. Measurements, data analysis, experimental techniques and report writing are stressed.

PHYS 202 Physics — see PHYS 102.

SURV 125 Introduction to Survey — Introduction to the theory of engineering survey, practical application of linear measurements, introduction to and theory of the theodolite, bearings and traverse computations, introduction to and theory of levelling, computation of areas and volume.

TCOM 101 Introduction to Technical Communication — This course covers basic writing and speaking skills needed for communicating technical information in industry. Students learn how to organize messages, illustrate documents, define and describe mechanisms and processes; write memos, letters, and instructions. Students also prepare and deliver oral presentations.

TCOM 205 Technical Communication — In this course, students apply the skills learned in the first term to write resumes, job application letters and occurrence, incident, inspection, field trip, progress, recommendation, comparison, feasibility, performance appraisal and evaluation reports. Prerequisite: TCOM 101.

TCOM 303 Advanced Technical Communication — In this course, students practice typical kinds of engineering communication such as persuasive and technical letters, incident and trip reports, proposals and executive summaries. They update resumes and job application letters and learn how to participate in meetings. Prerequisite: TCOM 101, 205.

Chemical Sciences

Chemical principles and processes form the base of modern industrial society. Whether in the research laboratory or industrial chemical plant, the chemical analyst and chemical process technologist are in great demand. Their skills find challenges on many fronts, including solving environmental pollution problems. Because chemical principles are so universally used, graduates of the Chemical Sciences program find employment in almost every major industrial and research activity in B.C.

Job Opportunities

Graduates are employed as chemists and analysts in research facilities and commercial and industrial labs; engineering assistants in consulting firms; production supervisor trainees in production plants; analysts in environmental and chemical laboratories; assayers or mineral processing technicians in extractive metallurgy plants; process technologists in pulp mills and as materials testing and nondestructive testing specialists.

The Program

The Chemical Sciences Program offers the student grounding in general science and technology courses in the first year of studies, with the opportunity for specialization in second year.

The first year curriculum emphasizes applied chemistry, general laboratory procedures and testing, and introduces the student to a wide range of industrial chemical processes.

In the second year, Analytical Chemistry, Unit Operations and Unit projects are compulsory throughout while most other courses are chosen on an elective basis, depending on which technology the student wishes to specialize in. The following programs are offered: **Environmental Science and Pollution Control, Industrial Chemistry, Metallurgy, Pulp and Paper.**

Prerequisites

Chemistry 11 and Algebra 12 are course requirements for this program.

Course Descriptions

CHEM 101 Applied Chemical Principles 1 — Provides the necessary background for chemical calculations and analysis. Included are stoichiometry, atomic structure, bonding, solution preparation and acid-base and oxidation-reduction reactions and titrations. Simple chemical equilibrium leads to a good working knowledge of pH, buffer solutions, solubility product, selective precipitation and industrial processes involving equilibria. Lab work consists of simple qualitative and quantitative analysis and good lab technique is taught.

CHEM 201 Applied Chemical Principles 2 — A continuation of CHEM 101 giving detailed coverage of gravimetric and volumetric analysis and qualitative analysis of cations and anions. Electrochemistry includes cells, electroplating and corrosion. Simple physical chemistry provides theory of solids, liquids and gases leading to fractional distillation and colligative properties. The Periodic Table is used to correlate many properties of elements and compounds. Names and properties of some organic compounds are covered and lab work covers qualitative and quantitative analysis and physio-chemical separations.

CHEM 204 Chemical Laboratory Techniques — This course teaches basic techniques in sampling, weighing, moisture determination, ashing, extractions, filtration gravimetric methods and volumetric methods. Emphasis is placed on the separation of unwanted components of natural samples. Instrumental analysis and separation methods will be described, demonstrated and, whenever possible, practised.

ration of unwanted components of natural samples. Instrumental analysis and separation methods will be described, demonstrated and, whenever possible, practised.

CHEM 309 Organic Chemistry — Organic compounds are classified according to functional groups. Naming using IUPAC, common names and trade names of many industrial chemicals. Factors affecting boiling point and solubility, theory of extraction. Preparation and reactions of alkanes, alkenes, aromatics, alcohol. Petroleum refining, addition polymerisation, synthetic rubber. Theory of infrared spectroscopy, interpretation of spectra.

CHEM 310 Physical Chemistry — Presents the kinetic theory of gases, the first and second laws of thermodynamics, phase equilibria, chemical kinetics and catalysis. Lab work consolidates lecture material and gives experience in practical physio-chemical measurements.

CHEM 314 Analytical Chemistry 1 — The course covers the theory and practice of conventional methods of inorganic analysis and includes methods of sample decomposition, sampling, treatment of analytical data, precipitation and complex formation titration, solvent extraction and ion exchange methods, and fire assaying. Laboratory exercises include the ore analysis for iron, chromium, tin, copper, arsenic, zinc, sulphur and silica, as well as fire assaying for gold and silver.

CHEM 409 Organic Chemistry for Chemical Science 2 — A general course covering properties, preparations and reactions of all major classes of organic compounds — aliphatic and aromatic hydrocarbons, halides, alcohols, ethers, carboxylic acids and their derivatives, aldehydes, ketones, amines, amino acids, carbohydrates, heterocyclics, dyes and polymers. Lab work emphasizes organic techniques, qualitative chemical analysis and instrumental methods, infra-red, ultraviolet and gas chromatography.

CHEM 414 Analytical Chemistry 2 — Introduces the basic principles of analytical instruments and their application to a variety of analyses. Major topics include analytical absorption methods (visible, ultraviolet, infrared and atomic absorption), emission methods (flame, spectrographic, ICP), x-ray fluorescence and diffraction methods, chromatographic methods (gas and HPLC), electrochemical methods (PH, specific ion, polarography) and trace analysis (electrothermal atomization, hydride generation, etc.).

CHEM 416 Analytical Instrumentation 1 — Covers the construction of electrodes and the use of operational amplifiers in the following analytical methods: constant current coulometric titration, amperometric, potentiometric and polarographic methods. Phototransducers and photometric circuits.

CHSC 103 Engineering Materials — Physical testing of materials including metals, plastics, wood and wood products, concrete, ceramics and soils. Nondestructive testing. Microscopy, photomicrography and photography.

CHSC 119 Environmental Science — An introductory course in environmental chemistry and pollution control. The course examines the major air and water pollutants, including measurement techniques and engineering control methods. Laboratory sessions cover sampling methods now used by industry in B.C.

CHSC 202 Laboratory Workshop — Instruction in basic workshop techniques including glass blowing, soldering, brazing and gas welding. Use of hand and bench tools.

CHSC 203 Engineering Materials — Continuation of CHSC 103.

CHSC 246 Industrial Chemical Processes — A description of the chemical processes involved in major industrial chemical plants in B.C. Emphasis is placed on chemical operations associated with the pulp and paper industry, the mineral processing industry and other B.C. chemical process industries. Lab sessions involve the testing and control procedures utilized in industrial applications.

CHSC 301 Physical Metallurgy — Metallurgy topics will include metal processing, material defects and failure analysis. Laboratory work will emphasize metallography and physical testing.

CHSC 307 Extractive Metallurgy — Is concerned with the unit operations of coal and nonferrous metals recovery and upgrading, and with the unit processes of nonferrous and previous metal recovery from ores and concentrates. Mineral processing covers the basic operations of comminution, particle size analysis, classification, screening, flotation, gravity separation. Extractive metallurgy covers the fundamental principles and processes of hydrometallurgy, pyrometallurgy and electrometallurgy. Solutions to design and operating problems are emphasized.

CHSC 311 Pollution Science and Organic Chemistry — An introduction to organic chemistry, with applications to industrial pollution problems.

CHSC 320 Unit Project — Projects relating to the student's chosen specialty are assigned each term. Regular progress reports and a final term report are required. Industrial and laboratory training is emphasized.

CHSC 341 Unit Operations — First and second law of thermodynamics; enthalpy, entropy, phase rule, thermodynamic diagrams and tables; properties of steam; fluid flow and measurement in pipes and channels, piping, pipe fittings and valves; flow of heat, conduction, convection, radiation, film and overall transfer co-efficients, heat exchangers; principles and application of equipment for evaporation, distillation, absorption, extraction; humidification and dehumidification; drying; solid-liquid and liquid-liquid extraction.

CHSC 346 Pulp and Paper — Pulp and paper technology is concerned with mechanical and kraft pulping, chemical and heat recovery, bleaching, papermaking, newsprint manufacture, process control and product testing. The lab portion of this course is designed to equip students with basic testing skills and provide "hands-on" experience with typical mill unit operations. Projects are undertaken in term 4 to involve students in planning and carrying out practical project work.

CHSC 404 Physical Metallurgy — Phase diagrams, alloying of metals, heat treatment, nondestructive testing.

CHSC 408 Ore Analysis — A survey of analytical methods to determine the elemental constituents of ores, concentrates, alloys and metal products. Laboratory work includes principles and practice of gravimetric, volumetric, complexometric and spectrophotometric methods of analysis.

CHSC 411 Pollution Science and Microbiology — Discusses air pollution meteorology, air pollution chemistry, air sampling methods, classical and instrumental techniques for measuring atmospheric and indoor contaminants (e.g. hydrogen sulfide, mercaptan, sulfur oxides, carbon monoxide, ozone, nitrogen oxides, various organic contaminants and lead, mercury, cadmium and zinc in air, etc.), particulate counting and sizing, stack sampling and some of the principles and techniques used in water pollution microbiology. Laboratory sessions include standard methods used by industrial and government laboratories.

CHSC 412 Waste Management — Physical, biological and chemical methods used in treating municipal and industrial waste waters. The major industrial techniques for control of air pollutants are also discussed.

CHSC 413 Environmental Analytical Methods — Surveys suitable methods of examining many types of water, waste water and materials related to control of water quality. Typical industrial pollution problems related to local industry are discussed during lab periods and special attention is given to proper sampling techniques. A selection is made from the following analysis of field samples; cyanide, pesticides, arsenic, mercury, nitrogen (ammonia, nitrate, organic), oxygen (D.O., B.O.D., C.O.D.), surfactants, phosphates, sulphates, chlorides, proteins, carbohydrates, lignins, phenols and heavy metals.

CHSC 420 Unit Project — see CHSC 320.

CHSC 441 Unit Operations — see CHSC 341.

CHSC 446 Pulp and Paper — See CHSC 346.

CHSC 448 Industrial Chemistry — A survey course covering the major chemical process industries. Lecture material is selected from the following topics; chlorine and caustic production, aluminum production, petroleum refining, metal refining, plastics, phenol and resins, material and energy balances.

ELEX 254 Process Measurement — An orientation course with emphasis on lab exposure to industrial equipment. Standard methods of applying commercial instruments to measure pressure, level flow and temperature variables are included. The course ends with an introduction to the principles of regulators and controllers.

MATH 141 Basic Technical Mathematics for Chemical Sciences — Graphical linear programming. Exponential/logarithmic theory and transformations, common and natural logarithms and logarithmic/semilogarithmic graphs. Radian measure. Trigonometric functions of any angle, vectors and solution of triangles, graphs of trigonometric functions, identities, compound and double angle formulas; trigonometric equations, and inverse functions.

MATH 241 Statistics 1 and Calculus 1 for Chemical Science — Organization and graphical presentation of data, frequency distributions, measures of central tendency and variation, probability theory, random variables, theoretical distributions, sampling and estimation. Delta-process, the derivative, differentiation rules, implicit differentiation, related rates and applied maxima/minima. The indefinite and definite integrals with applications. Trapezoidal and Simpson's rules for numerical integration. Related rate problems with functions of several variables.

MATH 341 Numerical Method and BASIC for Chemical Sciences — BASIC arithmetic and functions, input/output statements, relational operations, branching statements, formatted output, strings, arrays, and files. Gauss-Jordan method applied to the solution of systems of linear equations, solution of algebraic and transcendental equations by iterative methods, linear programming using the simplex method.

MATH 441 Calculus 2 and Differential Equations for Chemical Sciences — Differentiation and integration of logarithmic and exponential functions with applications. Tables of integrals. Differential equations including variables separable and linear first order with applications. Computer application of Euler's, Heun's and Runge-Kutta's methods for solving differential equations.

MECH 103 Drafting — An introductory course for persons with little or no experience in graphics. (Students are required to purchase drafting equipment and supplies on the first night of class.) Students learn to produce and read simple drawings. Topics include scales, geometric constructions, basic orthographics detail interpretation, line visibility, dimensioning, auxiliary views, true shape, inclined and skew surfaces, sections, pictorials, working drawings and freehand sketches.

MINE 454 Mining Industry for Extractive Metallurgy — An introduction to mineral and rock identification, nature of ore bodies, mining methods.

PETR 403 Process Dynamics — Introduces a practical and effective computer based approach for studying and evaluating 'real time' process control situations. The student is required to produce interim progress reports during the course and a final, formal technical report at the end of the course. Topics include: system dynamics, response time, control strategies, system optimization, system modelling, flow charting, transducer and control valve evaluation.

PHYS 114 Physics for Chemical Sciences — An introductory level course covering kinematics, dynamics, function, statics, angular motion, energy, momentum, simple machines, properties of matter, fluid mechanics, temperature and heat, thermal properties of matter, basic electricity and magnetism, wave motion and sound, electromagnetic waves, optics, atomic and nuclear phenomena. The lab program stresses measurement, data analysis, experimental technique and report writing. Mathematical treatment requires algebra and trigonometry.

PHYS 214 Physics for Chemical Sciences — See PHYS 114.

TCOM 101 Introduction to Technical Communication — This course covers basic writing and speaking skills needed for communicating technical information in industry. Students learn how to organize messages; illustrate documents; define and describe mechanisms and processes; and write memos, letters, and instructions. Students also prepare and deliver oral presentations.

TCOM 202 Technical Communication for Chemical Sciences — Students will write a resume and job application letter, and prepare for job interviews. They will do library research, write several short reports, give an oral report, and practice effective meeting strategies and telephone techniques. Prerequisite: TCOM 101.

Faculty and Staff

R. Hyde, B.S.A., M.Sc., P.Ag., Associate Dean

S. Berghold

J. Berry, B.Sc., Ph.D.

W.J. Bogyo, B.C.L.Ass., Senior Instructor

R. Drouin, Dipl.T.

W.R. Irvine, B.A., M.Sc., P.Eng., Program Head

D.J. McLeod, A.R.M.T.C., A.I.M.

Diamond Driller Helper

Diamond driller helpers assist qualified drillers to operate drilling equipment in rock and soil to facilitate blasting in mining or construction projects. They tap sub-surfaces to explore the earth for mineral deposits, sample rock for suitability and seismic prospecting, as well as take core samples.

Program Content

Familiarization with Loney 38 drill
Transport, set up, operate and dismantle rigs
Supply pumps
Helicopter safety
Mechanical and electrical safety procedures
Welding
Hydraulics
Operate support equipment
Ecology's role in nature

Length of Program 14 days

Normal Course Hours: 0830-1530

Training Location: Kamloops

Prerequisites

Grade 10 and a recent medical certificate showing good hearing and physical condition. The Mines Regulation Act requires individuals working at the mine face to be 18 years of age. Must have a good working knowledge of the English language.

Career Potential

Opportunities exist in most heavy industrial trades, mining and forestry, exploration companies, oil and mineral industries, and related occupations.

Instructor

T.B.A.

Greenhouse, Nursery and Landscape Worker

The Program

The course will prepare students for entry-level employment as greenhouse, nursery or landscape workers. It also qualifies the student to enter the 4-year B.C. Apprenticeship program with 6-12 months credit. The practical theory, along with hands-on shop practice, will enable students to perform common greenhouse nursery and landscape tasks competently.

Program Content

Identify 200-300 greenhouse and landscape plants
Describe plant usage in various climates, microclimates and landscape designs
Identify plant parts and processes
Provide a favorable growing environment by using protective structures and control systems for heat, light, water and relative humidity
Identify and improve various soils and pot plant media
Drain and irrigate landscaped areas and containerized plants

Select and use specialized tools and machinery
Identify common pests, diseases and weeds
Obtain a Pesticide Applicators Certificate
Install and maintain turf
Install and maintain trees, shrubs and herbaceous displays
Propagate plants by seed, cuttings, division and graftage
Plant and maintain containerized and field grown hardy nursery stock
Plant and maintain greenhouse crops for indoor display
Estimate business risks, landscape maintenance costs and horticultural opportunities

Length of Program

10 months, 2 of which include a co-operative segment of practical training with the B.C. horticultural industry.

Prerequisites

Grade 10 and pass an entrance test measuring math and reading skills.

Strong and healthy backs and knees are important prerequisites.

Please note: Students/graduates will be required to work with pesticides and in inclement weather. If you have allergies you must be able to control them with medication because exposure is great.

Career Potential

Successful graduates may find employment with established landscape maintenance and installation firms, garden centres, greenhouses, nurseries and municipal and provincial Parks Boards. There is also good potential for self-employment.

Instructors

Steve McNamara, Dip. Hort., Kew
Jim O'Friel
Suzanne Wilkinson, B.A., N.D.H.

Mining

Technologists have an important role to play in the exploration, development and extraction of mineral resources. Up-to-date technology such as computer applications are vital to B.C. and Canadian mining due to narrow profit margins. Gross profits and total numbers employed indicate the mining industry is still commanding a major position in B.C. Coal, industrial mineral and precious metal sectors have expanded to major roles. The technology is many-faceted, and the opportunities are similarly wide-ranging.

Job Opportunities

Graduates enter a wide field of mining and related occupations, from exploration to production, from field to office: geology, geophysics, geochemistry, surveying, sampling, assaying, mine planning, production supervision, services (eg. water control, road construction), rock mechanics, diamond drilling, blasting, equipment sales and computer applications. After an initial training period, one can expect varied, creative, and often independent work with considerable responsibility. Advancement to supervisory positions is possible to graduates with initiative, ability and leadership.

Mining communities tend to have well-supported entertainment, sport, and outdoor recreation facilities. These and other benefits often permit the young family to start budgets on a more positive note.

The Program

Courses reflect the wide range of applications and include the following: geology and mining topics in all terms, mineral processing and assaying, civil engineering, surveying, physics, math and communications courses particularly adapted to mining problems. Projects and assignments emphasize industry applications and a hands-on approach, and are increasingly computer-oriented. Field schools and guest lecturers are important aspects of the curriculum.

BCIT Mining students enjoy an unusually high level of student financial assistance.

There are good transfer arrangements with several universities and approximately 25% of our students ultimately continue to engineering degrees. Placement of graduates is in the 90% range.

The program is accredited by the Applied Technologists and Technicians of British Columbia.

Prerequisites

Algebra 12, Physics 11 and Chemistry 11, are course requirements for this program.

Course Descriptions

CHEM 101 Applied Chemical Principles 1 — Provides the necessary background for chemical calculations and analysis. Included are stoichiometry, atomic structure, bonding, solution preparation and acid-base and oxidation-reduction reactions and titrations. Simple chemical equilibrium leads to a good working knowledge of pH, buffer solutions, solubility product, selective precipitation and industrial processes involving equilibria. Lab work consists of simple qualitative and quantitative analysis, and good lab technique is taught.

CHEM 201 Applied Chemical Principles 2 — A continuation of CHEM 101 giving detailed coverage of gravimetric and volumetric analysis and qualitative analysis of cations and anions. Electrochemistry includes cells, electroplating and corrosion. Simple physical chemistry provides theory of solids, liquids and gases leading to fractional distillation and colligative properties. The Periodic Table is used to correlate many properties of elements and compounds. Names and properties of some organic compounds are covered and lab work covers qualitative and quantitative analysis and physio-chemical separations.

CHSC 305 Assaying — Analytical chemistry applied to the ore minerals, with special attention to fire assaying for gold and silver. Gravimetric, volumetric and instrumental methods are developed for the more common metals.

CHSC 314 Mineral Processing — Deals specifically with mineral processing as applied to the B.C. mining industry. Covers the essential operations of applied mineral processing ie: grinding, screening, gravity separation, cyclone classification, flotation, sedimentation, thickening, filtration. Emphasis on numerical solution of operating and design type problems. Course includes laboratory work.

CHSC 405 Assaying — A continuation of CHSC 305.

CHSC 414 Mineral Processing — A continuation of CHSC 314. Prerequisite: CHSC 314.

CIVL 339 Statics and Strength of Materials — The definitions, representations and uses of forces and moments are presented, leading to the equations of equilibrium. Topics include: free bodies, trusses, stresses, shear and bending moment diagrams.

CIVL 440 Statics and Strength of Materials — Simple stresses; stress, strain elasticity; compound bars and columns; temperature stress; elastic limit; limit of proportionality; yield; ultimate; factor of safety; load factor; ductility; resilience; fatigue; shock. Properties of sections; bending moments; shear forces; theory of flexure; deflection of beams; eccentric loading; lateral loading; compound stress and strain; Poisson's ratio; principal stress and strains; Mohr's circle; testing techniques; machines; extensometers; strain gauges; photo elasticity. Special sessions on rock mechanics. Prerequisite: CIVL 339.

CIVL 441 Hydraulics — Properties of fluids, hydrostatics, pressure and centre of pressures; fluid flow, continuity equation, velocity head, Venturi meters. Pipe friction and flow. Flow conditions. Open channel flow in flumes and streams. Flow measurement. Lab demonstrations. Pumps. Prerequisite: CIVL 339.

MATH 150 Basic Technical Mathematics for Mining — Graphical linear programming. Exponential/logarithmic theory and transformations, common and natural logarithms and logarithmic/semilogarithmic graphs. Radian measure. Trigonometric functions of any angle, vectors and solution of triangles,

graphs of trigonometric functions, identities, compound and double angle formulas, trigonometric equations and inverse functions.

MATH 250 Calculus 1 and 2 for Mining — Limits, the derivative, differentiation rules for algebraic, trigonometric, inverse trigonometric, logarithmic and exponential functions; curve sketching, implicit differentiation, higher order derivatives, applied maxima/minima, related rates and differentials. Antidifferentiation, the indefinite integral and the definite integral including area, volume, centroid and other applications. Tables of integrals, integration by parts, partial fractions and substitution techniques.

MATH 350 FORTRAN and Network Scheduling for Mining — FORTRAN arithmetic and variables, input/output and formatting, branching, arrays, functions and subroutines. Critical path networking principles, events, activities and slack. Network replanning and adjustment, and crashing a project. Scheduling under limited resources and resource leveling.

MATH 450 Statistics for Mining — Linear programming using the simplex method. Organization and graphical presentation of data, frequency distributions and measures of central tendency, variation and other measures. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Method of least squares, regression and correlation. Geostatistical estimation.

MECH 101 Drafting Fundamentals — An introductory course for persons with little or no experience in graphics. (Students are required to purchase drafting equipment and supplies on the first night of class). Students learn to produce and read simple drawings. Topics include scales, geometric constructions, basic orthographics detail interpretation, line visibility, dimensioning, auxiliary views, true shape, inclined and skew surfaces, sections, pictorials, working drawings and freehand sketches.

MECH 201 Drafting (Mining) — Involves techniques in ink, contours, intersection and developments, dip, strike and outcrop, sections, profiles, descriptive geometry and other graphical mining problems.

MINE 101 Geology — Definition, basic concepts, earth's crust, geologic time; atomic structure of minerals, crystal forms and symmetry systems; properties of common minerals, sedimentary rocks, clastic and chemical sediment; igneous rocks, deformation of earth's crust; metamorphic rocks.

MINE 102 Mining — The objective: an introduction to the general sphere of mining and, more particularly, mining exploration. 10 hrs. on identifying the factors important to mine profitability; 20 hrs. giving a unified picture of modern prospecting techniques: geochemistry in some detail, geology, geophysics, sampling and diamond drilling. Maps, photos, reports and references; economics and planning.

MINE 142 Handheld Computer Techniques — An introductory course in the use of the microcomputer to solve various mathematical and surveying problems. Emphasis will be on the application of the small computer system to the solution of mining related problems. Topics include computer programming in BASIC and in small computer systems communications.

MINE 201 Geology — Deformation of earth's crust, folds, faults; weathering, erosion and glaciation; economic geology, mineral fuels, non-metallics, ore deposits and their controls; geological history, pre-Cambrian, Paleozoic, Mesozoic, Tertiary, Pleistocene; geologic maps. A continuation of MINE 101.

MINE 202 Mining — A full description of mining methods; brief subjective descriptions of rock mechanics, fragmentation and mine services which receive detailed treatment elsewhere. Unit operations of drilling, blasting, loading and hauling are discussed in the context of organization, equipment, labor and supplies. Prerequisite: MINE 102.

MINE 301 Structural Geology — Brief review of mechanical principles of rock deformation and of the primary structures of sedimentary, igneous and metamorphic rocks. The origin, nature and classification of joints; folds and faults, with emphasis on their relation to mineral resources. Lab work includes examinations of specimens, methods of recording structural data, mapping and solution of structural problems, with emphasis on economic aspects. Prerequisite: MINE 201.

MINE 302 Mining — Products, initiation systems, underground and open-cast applications and design, control blasting, safety, field labs. Rock mechanics: rock-mass classification and field observations, data storage and retrieval, stress field description, modes of failure, ground water effects, ground control methods (slope stability, support, stope design), ground movement monitoring. Prerequisite: MINE 202.

MINE 401 Geology: Mineral Deposits — The terminology, classification, manner of occurrence, distribution and economics of mineral resources, with emphasis on typical Canadian occurrences. Ways of recognizing, discovering and developing mineral deposits. Lab work illustrates and develops techniques in megascopic study and identification of hand specimens; valuation of mineral deposits, computer data storage and retrieval. Field trips are correlated with all classroom work in geology. Prerequisite: MINE 201.

MINE 402 Mining — Sampling, geo-statistics and modeling, cutoff grades, waste/ore ratios, capital and operating cost estimation, taxation marketing, ore schedules, cash-flow and present value, and rate-of-return projections. Services: mine ventilation, electrical distribution, compressed air, water control, other materials handling systems, reclamation and pollution control. Prerequisite: MINE 302.

PHYS 101 Physics for Mining and Petroleum — A general level course covering mechanics, dynamics and the properties of solids and fluids. The associated laboratory covers the principles of measurement and the experimental method of acquiring knowledge.

PHYS 201 Physics for Mining and Petroleum — A general level course covering thermal properties of matter, waves, electricity, magnetism, electromagnetism and atomic and nuclear physics.

PHYS 204 Introductory Geophysics — Utilizing concepts covered in PHYS 201, the course is an introduction to the uses of geophysics in the search for ore deposits. The course consists of lectures, case study exercises and some field exercises covering the gravity, magnetic, resistivity, self-potential and seismic method of analyzing the physical properties of the earth.

PHYS 304 Mining Geophysics — Consists of field work and some lectures on geophysical methods of mineral exploration. Emphasis is on the operation of geophysical instruments, the method of conducting geophysical surveys and the presentation and interpretation of data.

SURV 140 Surveying — Substance of course is on ground points, sighting devices; measurement of distances and angles with a variety of instruments, tapes, etc., under a variety of conditions; compass; accuracy and precision; plane table; errors and mistakes; direction; stadia, profiling; topography;

line production offsets; interlining and intersection; random lines and physical feature ties; computations — traverses, coordinate systems; triangulation; areas and volumes; special engineering survey problems and curves.

SURV 240 Surveying — see SURV 140.

SURV 340 Surveying — Application of survey methods to underground and surface mines. Underground surveying in shaft sinking, development control (level and inclined) and production areas. Elementary astronomy, establishing azimuth by solar and pole star observations. Mine quantities in development areas, pickup of tunnels, cross sectioning, stopes (including tonnage calculations). Construction of mine plans and sections. Field projects include tunnel surveys and open-pit triangulation, tri-lateration and bench pickup. Mining Acts applied to surveying.

SURV 440 Surveying — A continuation of SURV 340. The content is the same.

TCOM 101 Introduction to Technical Communication — This course covers basic writing and speaking skills needed for communicating technical information in industry. Students learn how to organize messages, illustrate documents, define and describe mechanisms and processes; write memos, letters and instructions. Students also prepare and deliver oral presentations.

TCOM 211 Technical Communication for Mining — The major portion of the course provides instruction and practice in writing many different kinds of short, informal, industry-related reports. Students learn how to write resumes and job application letters. They also participate in job interviews, meetings and oral technical briefings. Prerequisite: TCOM 101.

TCOM 306 Advanced Technical Communication for Mining — This course builds on the practice and principles presented in first year. It introduces students to more difficult kinds of letters, memos and short reports. It includes instruction and practice in handling criticism and grievance procedures, participating in meetings, retrieving technical mining-related data, and briefing small groups. As far as possible, assignments are integrated with students' other courses. Prerequisite: TCOM 101, TCOM 211.

TCOM 404 Advanced Technical Communication for Mining — Students complete and update the job search component begun in first year. They then work on more specialized technical reports — site descriptions, geological reports and analytical reports on specific mining methods and equipment. They give a final technical briefing on their mining methods report. As far as possible, assignments are integrated with students' other courses. Prerequisite: TCOM 101, TCOM 211, TCOM 306.

R.B. Hyde, B.S.A., M.Sc., P.Ag., Associate Dean
J.F. Fairley, B.A.Sc., P.Eng.

Petroleum

Because of its size and diversity, the petroleum industry is unique, both in its extremely wide range of occupational opportunities, and in the many challenges it offers employees for learning and growing.

Job Opportunities

The petroleum industry can be considered under four general areas: Exploration and Production, Transmission and Distribution, Manufacturing (refining), and Marketing. There are a variety of positions to be filled by Petroleum Technology graduates in each of these areas. Past graduates are successfully employed in all these areas, both in Canada and throughout the world. Positions may be available in the following areas:

Exploration and Production: Geologic studies, reservoir studies, well testing and servicing.

Transmission and Distribution: Operation and maintenance of pipelines, utility studies and corrosion control.

Manufacturing: Process operations, laboratory and product quality control, effluent control.

Marketing: Product application for all of the petroleum products produced for commercial and industrial equipment.

The Program

The curriculum is designed to cover all major aspects of the petroleum industry, thereby enabling the graduate to successfully enter any area of the industry. The first year covers petroleum geology, reservoir studies and the production and field handling of oil and gas. Emphasis is also given to the basic sciences — chemistry, physics and mathematics — necessary for the scientific and engineering principles involved in studies throughout the course.

The second year covers pipeline transmission, oil refining and products utilization, and gas distribution. Alternate fuels are also examined. Computer applications in all areas of studies will be emphasised. Classroom and laboratory instruction will be supplemented by field trips to local installations.

This program is accredited by the Applied Science Technologists and Technicians of B.C.

Prerequisites

Algebra 12, and Physics 11 or Chemistry 11, are course requirements for this program. Students should have a keen interest in the operation of large-scale equipment, be prepared to work outdoors and, with training, must be capable of assuming responsibility for the satisfactory and safe operation of highly complex plant equipment.

Course Descriptions

CHEM 101 Applied Chemical Principles 1 — Provides the necessary background for chemical calculations and analysis. Included are stoichiometry, atomic structure, bonding, solution preparation and acid-base and oxidation-reduction reactions and titrations. Simple chemical equilibrium leads to a good working knowledge of pH, buffer solutions, solubility product, selective precipitation and industrial processes involving equilibria. Lab work consists of simple qualitative and quantitative analysis and good lab technique is taught.

CHEM 201 Applied Chemical Principles 2 — A continuation of CHEM 101 giving detailed coverage of gravimetric and volumetric analysis and qualitative analysis of cations and anions. Electrochemistry includes cells, electroplating and corrosion. Simple physical chemistry provides theory of solids, liquids and gases leading to fractional distillation and colligative properties. The Periodic Table is used to correlate many properties of elements and compounds. Names and properties of some organic compounds are covered and lab work covers qualitative and quantitative analysis and physio-chemical separations.

CHEM 310 Physical Chemistry — Presents the kinetic theory of gases, the first and second laws of thermodynamics, phase equilibria, chemical kinetics and catalysis. Lab work consolidates lecture material and gives experience in practical physio-chemical measurements.

CHEM 415 Petroleum Chemistry — Presents a survey of the properties and common reactions of the classes of organic compounds which are found in petroleum or are of importance in the petrochemical industry. The chemistry of refining processes, instrumental lab analysis and synthesis of some petrochemicals are presented.

CHSC 106 Engineering Materials — A comparison of materials: concrete, metals, alloys, polymers and ceramics. Common causes of failure in service including corrosion, wear, fatigue and embrittlement. Lab sessions emphasize physical testing and nondestructive testing.

CHSC 341 Unit Operations — First and second law of thermodynamics; enthalpy, entropy, phase rule, thermodynamic diagrams and tables; properties of steam; fluid flow and measurement in pipes and channels, piping, pipe fittings and valves; flow of heat, conduction, convection, radiation, film and overall transfer co-efficients, heat exchangers; principles and application of equipment for evaporation, distillation, absorption, extraction; humidification and dehumidification; drying; solid-liquid and liquid-liquid extraction.

CHSC 351 Pollution Control — Fundamentals of waste treatment and management systems. Basic sampling and testing techniques.

CHSC 441 Unit Operations — see CHSC 341.

COMP 122 Computer Applications — Introduction to the components of a computer. Introduction to BASIC on a micro-computer. Relationship of data to input/output. Introduction to FORTRAN and WATFIV on the IBM mainframe computer. The problems solved via programming are in the petroleum field.

MATH 147 Basic Technical Mathematics for Petroleum — Graphical linear programming. Exponential/logarithmic theory and transformations, common and natural logarithms and logarithmic/semilogarithmic graphs. Radian measure and its applications. Trigonometric functions of any angle, vectors and solution of triangles, graphs of trigonometric functions, identities, compound and double angles, trigonometric equations and inverse functions.

MATH 247 Calculus 1 and 2 for Petroleum — Limits, the derivative, differentiation rules for algebraic, trigonometric, logarithmic and exponential functions; curve sketching, implicit differentiation, higher order derivatives, applied maxima/minima, related rates and differentials. Antidifferentiation, the indefinite integral and the definite integral including areas and volumes. Tables of integrals, integration by parts and by trigonometric substitution.

MATH 347 Differential Equations for Petroleum — Integration using partial fraction methods. Elementary differential equations and separation of variables. Integrating factor method for first order differential equations; solutions by numerical methods. Second order differential equations. Partial differentiation. Practical applications of all of the above topics.

MATH 447 Statistics and Numerical Methods for Petroleum — Organization and graphical presentation of data, frequency distributions and measures of location and dispersion including mean and standard deviation. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Correlation. Linear programming using the Simplex method. Gauss-Jordan method for solving sets of simultaneous equations. Solution of algebraic and transcendental equations by iterative methods.

PETR 102 Petroleum Geology — Covers topics in petroleum geology and rotary drilling. Petroleum geology topics include: historical geology, composition of the earth's crust, origin of petroleum, petroleum migration, geology of reservoirs, structural and stratigraphic traps, sedimentary formations, carbonate formations, basic reservoir production calculations, construction of isochore and isopach subsurface maps. Rotary drilling topics include: drilling rigs, the drill string, drilling, drilling fluids, well control, down-hole equipment, an introduction to well testing and servicing.

PETR 103 Properties of Reservoir Fluids — Introduces the student to the chemical composition and physical properties of natural gas and crude oil, and the phase behavior these fluids exhibit during production from a reservoir. Some elementary applications of reservoir flow characteristics are considered.

PETR 201 Field Production of Gas and Oil — Covers basic down-hole hydraulics and an introduction to reservoir analysis and production. Topics include drilling fluids, hydraulics, core analysis, reservoir fluid flow, PVT analysis, reserves determination, production techniques and enhanced recovery techniques. A project related to reserves determination will be assigned during the term. Prerequisite: PETR 102.

PETR 202 Field Handling of Gas, and Oil and Gas Processing — Covers the handling of crude oil and natural gas from the well head to the transmission pipeline. Field handling to include: fluid stabilization, gas separation, hydrate control, emulsion treating, well effluent recombination calculations. Gas processing covers: sweetening, sulfur recovery, dehydration, natural gas liquids recovery. A technical report with oral presentation is required. Prerequisite: PETR 103

PETR 306 Oil Refining — Petroleum refining is a very complex operation due mainly to the multitude of products that are made. This course covers the refining processes involved in the production of these products. Processes considered include: atmospheric and vacuum distillation; thermal, catalytic and hydro cracking; catalytic reforming; alkylation; polymerization; hydrotreating; chemical treating; lubricating oil refining; process and effluent water treating. A term paper with oral presentation is required.

PETR 307 Pipeline Transmission — An introduction to natural gas transmission. Topics covered include: natural gas quality, large volume natural gas measurement, pipeline flow and design calculations, pipeline construction, design and operating codes, corrosion control, pipeline control and compressor stations.

PETR 308 Fuels — Examines alternate uses of conventional fossil fuels. Utilization, availability and production techniques of gaseous, liquid and solid fuels are discussed. Alternate fuel sources and alternate fuel applications are then examined. Topics include: natural gas, manufactured (coal) gas, LNG, LPG, gasolines, diesel fuel, fuel oils and types of coal. Alternate fuel topics include: simulated fuels, supplemental fuels and synthetic fuels. The use of compressed natural gas, propane and or gasoline/alcohol as a motor fuel will also be examined.

PETR 401 Gas Distribution and Utilization — An introduction to the distribution and utilization of natural gas. Topics covered include: gas measurement, pressure regulation, design and construction of distribution systems, corrosion control, leak surveys, maintenance, gas contract control, peak shaving, burner design, customer relations, system design and operational codes.

PETR 402 Petroleum Products: Testing and Utilization — Many different products are produced in an oil refinery. Each product has its own individual requirements depending on the use to which it is to be put. The lecture part of the course examines the desired properties and specifications of these products and the equipment in which the products are used. Laboratory periods cover the testing of various products obtained from a typical crude oil. Supplementing these studies are field trips to local refineries. A major term paper is required. Prerequisite: PETR 306.

PETR 403 Process Dynamics — Introduces a practical and effective computer based approach for studying and evaluating 'real time' process control situations. The student is required to produce interim progress reports during the course and a final, formal technical report at the end of the course. Topics include: system dynamics, response time, control strategies, system optimization, system modelling, flow charting, transducer and control valve evaluation.

PETR 404 Computer Simulation and Control — A course in basic computer simulation and control techniques. Emphasis will be on practical input/output applications. Topics include: concept of computer control, input/output software and hardware, interfacing, analog/digital conversions and practical applications.

PHYS 101 Physics for Mining and Petroleum — A general level course covering mechanics, dynamics and the properties of solids and fluids. The associated laboratory covers the principles of measurement and the experimental method of acquiring knowledge.

PHYS 201 Physics for Mining Petroleum — A general level course covering thermal properties of matter, waves, electricity, magnetism, electromagnetism and atomic and nuclear physics.

PHYS 204 Introductory Geophysics — Utilizing concepts covered in PHYS 201, the course is an introduction to the uses of geophysics in the search for ore deposits. The course consists of lectures, case study exercises and some field exercises covering the gravity, magnetic, resistivity, self-potential and seismic method of analyzing the physical properties of the earth.

SURV 128 Introduction to Surveying for Petroleum — In this course, students learn the fundamentals of clear technical writing and the principles of style and organization. They write documents relevant to the petroleum industry, including technical descriptions and letters and memos of request, adjustment and collection.

TCOM 101 Introduction to Technical Communication — In this course, students learn the fundamentals of clear technical writing and the principles of style and organization. They write documents relevant to the petroleum industry, including technical descriptions and letters and memos of request, adjustment and collection.

TCOM 208 Technical Communication for Petroleum — Students learn the fundamentals of job seeking, meetings and reporting. They write resumes, job application letters, technical briefs and proposals, and evaluation, recommendation, trip progress and occurrence reports. They practice chairing meetings and presenting oral reports.

R.G. Kinney, Dipl.T., A.Sc.T.T.

Quality Assurance and Nondestructive Testing

Post-diploma Program

This is a one year program leading to a Diploma of Technology. The program emphasizes nondestructive testing, quality control, and quality assurance concepts and techniques.

Graduates will be equipped to work as quality assurance technologists in a wide variety of light and heavy manufacturing industries.

Prerequisite

BCIT Diploma of Technology in an Engineering Program or Operations Management, or a two year college Diploma in Science, or a Bachelor's Degree in Science or Engineering.

PROGRAM: Quality Assurance and Nondestructive Testing

Level 5		Clim hrs/wk	
CHSC 538	Metallurgy and Physical Testing	6.0	
CHSC 539	Nondestructive Testing	10.0	
ELEX 258	Electrical Metrology	4.0	
MATH 514	Statistical Quality Control 1	4.0	
OPMT 536	Quality Assurance 1	6.0	
Level 6		A	B
MATH 614	Statistical Quality Control 2	4.0	4.0
MATH 624	Computer Applications: Statistical Quality Control	4.0	0.0
MECH 441	Metrology for QA/NDT	4.0	4.0
OPMT 636	Quality Assurance 2	6.0	6.0
OPMT 637	Management of Quality	4.0	4.0
OPMT 638	Computer Applications for QA	0.0	4.0
Elective:	CHSC 639 Advanced Testing Methods	8.0	8.0
	OPMT 639 QA Practicum	8.0	8.0

Course Descriptions

CHSC 538 Metallurgy and Physical Testing — Metallurgy topics will include metal processing, material defects and failure analysis. Laboratory work will emphasize metallography, physical testing methods, basic stress analysis, codes and specifications.

CHSC 539 Nondestructive Testing — Introduces the five major methods of nondestructive testing used in industry: radiography, ultrasonics, magnetic particle, liquid penetrant and eddy currents including the basic principles of the different methods including safety and reporting. Extensive hands-on time will be allotted to allow students to familiarize themselves with various types of equipment used in industry.

CHSC 639 Advanced Testing Methods — Uses the principles learned in CHSC 539 to progress to more specialized techniques. The course will also look in detail at special techniques not covered by the five major methods of NDT. These include environmental controls, strain gauging, acoustic emission, vibration analysis, thermography and in situ metallography.

ELEX 258 Electrical Metrology — Starting with a review of basic DC circuit theory, this introductory course covers AC theory basics, concepts of measurement, measurement of electrical quantities, standards of current and voltage, transducers, bridge circuits, error analysis and temperature compensation techniques.

MATH 514 Statistical Quality Control 1 — Covers basic probability theory and the statistical principles necessary to understand industrial applications of QC. Topics include descriptive statistics, the hypergeometric, binomial, Poisson, and Normal probability models, and an introduction to hypothesis testing and process capability. These concepts will be introduced in the context in which they could arise or be utilized in industry. This course and its sequel, MATH 614, will cover most of the statistical knowledge necessary to meet the requirements of ASQC's Quality Technician (CQT) and Quality Engineer (CQE) exams.

MATH 614 Statistical Quality Control 2 — Uses the principles learned in MATH 514 in specific industrial applications of quality control. Topics include sampling distributions and introduction to Statistical Process Control (SPC), troubleshooting with control charts (X, R, S, P, U, C, CUSUM charts), process capability, acceptance sampling techniques (construction of sampling plans, using established plans, MIL-STD-105D and 414), some experimental design and field work. MATH 614 will function in tandem with MATH 624 (Computer Applications).

MATH 624 Computer Applications: Statistical Quality Control — This course will utilize microcomputers and statistical quality control software to demonstrate methods of quality control used in industrial applications. The course will parallel and augment the related course MATH 614 and joint projects are planned.

MECH 441 Mechanical Metrology for Quality Assurance and Nondestructive Testing — Measurement of surface texture and flatness, optical and electrical comparators, metrology of screw threads, precision measuring instruments, fundamentals of inspection, mass production gauging.

OPMT 536 Quality Assurance 1 — Definition of desired product quality and conditions for its achievement. Technical concepts of reliability. Selection and control of production processes. Establishing quality objectives and planning to meet them. Human factors, motivation, employee involvement and Quality Circles. Inspection operations. Product testing. Qualification of operators. Control of special processes. Workmanship standards. Calibration control. Quality data feedback and corrective action system. Quality records and documentation, procedures and work instructions. Quality manuals.

OPMT 636 Quality Assurance 2 — Total quality assurance concepts. Tender and contract review. QA activities in new product development. New design assurance. QA engineering team. Selection and assessment of potential suppliers, vendor performance rating. QA procurement team. Quality cost analysis. Quality and productivity. Product liability and legal aspects of product safety. Quality improvement programs. Quality system auditing. Japanese quality management methods. The impact of JIT on product quality. Automated inspection and test operations. Quality assurance for software.

OPMT 637 Management of Quality — Deals with planning and implementing quality management to meet company objectives or to comply with regulations, codes and standards. Students will work on quality management case studies involving selected standards from CSA, ANSI, ASME, AQAP and US military, ASTM, UL, ISO, and Transport Canada. The course will explain how the techniques discussed in OPMT 536/636 fit into a planned, systematic program, to the extent required by whatever standard affects the company operations.

OPMT 638 Computer Applications for Quality Assurance — Computer applications for the quality management information system. Database and spreadsheet techniques are used to create records, reports and documentation for quality cost information, defect reporting, functional test failures, calibration system records, vendor performance rating, customer histories and field reports, corrective action program activities, trend analyses and summaries for top management.

OPMT 639 Quality Assurance Practicum — An industry-based study under faculty supervision. Is designed to give the student an opportunity to work in a quality assurance function in local industry on a special project, by arrangement with the quality manager of the company involved. Criteria, objectives, monitoring and evaluation are established by formal terms of reference for the practicum. While taking this post-diploma program course, students will normally also be registered in OPMT 636 and OPMT 637.

Wood Products Manufacturing

British Columbia's leading industry is rapidly adopting advanced technology for the production of lumber and plywood. New plants use computerization with automated processes to convert raw material into end products which are in great demand on local and world markets.

Job Opportunities

Young men and women with management skills are needed in B.C.'s largest industry to fill positions in supervisory, technical, marketing and sales. Graduates from this technology are found in key jobs throughout B.C.'s wood products industries. Most are employed where management skills are needed as supervisors, foremen, mill managers, sales people and sales managers, traders and quality control technicians or supervisors. Graduates are also employed in many other areas where their management-oriented training is valued.

The Program

First-year students in the Wood Products Program study basic sciences and introductory courses including wood science, log utilization, and lumber tallying and grading. In the second year there is increased emphasis on manufacturing techniques, process control and economics. Second-year courses also emphasize management skills in such applications as computers, mill supervision, sales and distribution, and business communications. Classroom instruction is heavily augmented by field trips to coastal and interior operations.

Prerequisites

Algebra 12 and one Science 11, Biology, Chemistry or Physics, are course requirements for this program. Applicants are sought who possess initiative, a sense of responsibility, and an interest in leadership and teamwork within industry. Industrial experience lends strength to an application.

- * The attainment of a recognized industrial certificate with a minimum mark of 70% is required as a condition of graduation.

Course Descriptions

CHSC 208 Engineering Materials — A comparison of materials important to forest products industries including wood and wood products, concrete, metals, alloys, polymers and ceramics. Common causes of failure in service including corrosion, wear, fatigue and embrittlement. Lab sessions emphasize physical and non-destructive testing.

COMP 121 Computer Applications — Computer applications in engineering technologies; how a computer works, recognizing problems suitable for computer solution, flow-charting and communicating with computer personnel. Emphasis is on the use of computers to solve problems related to the technology. Where available, "package" programs are demonstrated and used by students. FORTRAN or BASIC programming language is taught.

COMP 283 Linear Programming — Graphical method; algebraic method; simplex method; analysis of simplex results; LKP problem formulation; use of computer to solve problems; analysis of computer solution; use of reduced costs and shadow prices; sensitivity analysis; practical applications and limitations of LP; implementation of results.

ELEX 257 Electrical Equipment — An introduction to industrial electrical equipment. Topics include AC and DC motors and their application to electro-mechanical drive systems; protecting and controlling motors; industrial electrical power systems and related equipment; sources of energy; transformation into primary and secondary voltage levels, distribution of power throughout the plant; switching; voltage control and power factor correction.

LUPL 101 Wood Science 1 — An introduction to the manufacture of forest products. Topics include elementary botany, identification of British Columbia commercial tree species, macro and micro wood technology, and wood defects as they relate to lumber quality. The processing and handling of wood in preparation for lumber manufacturing: debarking, chipping, screening, conveyance and storage.

LUPL 102 Lumber Grading 1 — Given in term 1 in preparation for Lumber Grading 2, the course covers information fundamental to the grading of western softwood lumber including tree growth and wood structure, species identification, classification of products and the recognition of characteristics found naturally, and caused in manufacture.

LUPL 103 Lumber Tallying* — A full course on lumber tallying and shipping, including understanding Foot Board Measure; converting order data to specified lengths, pieces, bundles and packages; calculating wood moisture content and shrinkage; metric conversion and lumber pricing. Final examinations for certification are by the Council of Forest Industries (COFI) during which the student must achieve 70%. A COFI Certificate in Tallying is required to obtain the BCIT Diploma of Technology. Students must also obtain 50% marks during the term of the course given at BCIT.

LUPL 104 Log Utilization — Introduces the basic log-scaling procedures used in coastal mills and also includes different log-sorting methods and recovery calculations used in saw-mill and plywood industries. Considerable time is spent practicing scaling techniques on selected log booms.

LUPL 105 Lumber Manufacture — Methods and equipment used in the manufacture of lumber in the B.C. Coast and Interior are examined. Processes discussed include log preparation, initial and secondary breakdown, kiln drying and planing. Saw feeds, speeds and filing practices are also examined. Field trips augment material given in lectures.

LUPL 106 Plywood Manufacture — Methods and equipment used in the manufacture of plywood in the B.C. Coast and Interior are examined. Processes discussed include peeling, driving, lay-up and finishing. Some time is spent discussing other types of panel boards and related coatings and overlays. Field trips augment material given in lectures.

LUPL 107 Mill Management 1 — This course is designed to supplement material covered in courses on lumber and plywood manufacture. Topics include cost analysis, principles of supervision, accident prevention, fire prevention, industrial relations, maintenance organization, maintenance trades, mobile equipment, materials handling and pollution abatement. A large portion of time is spent on specific assignments in various manufacturing plants.

LUPL 108 Lumber Grading 2* — Students attend industry lumber grading classes sponsored by the Council of Forest Industries (COFI) and receive further instruction at BCIT. Final examinations for certification are given by COFI, at which time the student must achieve a 70% pass mark as a requisite to obtaining the BCIT Diploma of Technology. Students must also obtain the required 50% term marks for the in-school portion of the course.

LUPL 109 Mill Management 2 — see LUPL 107.

LUPL 201 Wood Science 2 — Topics covered include wood and chip units and conversion factors, mechanical and rheological properties, micro- and ultra-structure, wood protection and preservation. The lab section of the course is largely made up of a research project, with emphasis on reporting of methods and results. Prerequisite: LUPL 101.

LUPL 202 Summer Technical Report — Students make a detailed report on one phase of the technical operation of a forest products plant, from first-hand experience or from approved research sources.

LUPL 203 Mill Audit and Quality Control — Lectures and labs complement material given in Wood Products Manufacture courses and provide the student with the capability to set up and manage a quality control program in a sawmill and plywood plant. Besides being able to identify and correct problems related to quality, the student will be able to sample, analyze and report on size accuracy, fibre usage, product dryness and adherence to standards. Prerequisite: LUPL 105, LUPL 106.

LUPL 206 Plywood/Panelboard Manufacture — A continuation of LUPL 106. Methods and equipment used in the manufacture of plywood in the B.C. Coast and interior are examined. Processes discussed include lay-up, pressing and finishing. Methods and equipment used in other types of panelboard manufacture will also be discussed. Field trips augment material given in lectures.

MATH 146 Basic Technical Mathematics for Wood Products — Graphical linear programming. Exponential/logarithmic theory and transformations, common and natural logarithms and logarithmic/semilogarithmic graphs. Radian measure. Trigonometric functions of any angle, vectors and solution of triangles, graphs of trigonometric functions, identities, compound and double angle formulas, trigonometric equations and inverse functions.

MATH 246 Statistics and Quality Control for Wood Products — Organization and graphical presentation of data, frequency distributions, measures of central tendency, variation and other measures. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Method of least squares, regression and correlation. Analysis of variance. Control charts concepts and application, and acceptance sampling. Non-parametric statistics.

MECH 146 Interpretation of Engineering Drawings — An introductory course for persons with little or no experience in graphics. Students learn to produce by sketching basic orthographic and pictorial drawings. A strong emphasis will be placed on the understanding of engineering graphics rather than developing drawing skills. The latter part of the course will deal with blueprint reading in areas of wood products manufacturing.

MECH 416 Mechanical Equipment — Wood Products — A study of mechanical equipment relating to the transmission, application and control of power, with particular reference to the wood processing industry. Topics include line shafting, flexible couplings, V-belt and roller chain drives, gearing, variable speed drives; hydraulic and pneumatic systems, centrifugal pump applications and lubrication and bearings.

MKTG 420 Wood Products Sales and Distribution — Examines the major domestic and export markets for lumber and plywood, including ongoing changes in all types of distribution and transportation systems used by the forest products industry. The sales process, from telephone solicitation to complete documentation of FOB and CIF orders, is covered in detail.

OPMT 164 Management Engineering 1 — Wood Products — An organized approach to problem-solving, with emphasis on the forest products industry. Method study techniques such as problem selection, process charting, multiple activity charting, activity sampling, motion economy and critical examination and development of alternatives are covered. The course also includes an introduction to work measurement. The importance of establishing good human relations with employees is stressed throughout.

OPMT 264 Management Engineering 2 — Wood Products — The techniques required to solve plant layout and materials handling problems are covered and the student applies these techniques to a comprehensive in-house project. As a term project, the student selects for study a job in an industrial plant in the forest products industry. The student applies the techniques learned in OPMT 164 and the first part of this course to the solution of a plant project and submits a written report on the findings, including conclusions and recommendations.

PHYS 118 Physics for Wood Products — An introductory course covering statics, dynamics, momentum, force, friction, energy, power, angular momentum, simple machines, properties of solids, fluids, fluid mechanics, thermal properties of matter, thermal energy, basic electricity and magnetism, optics and atomic and nuclear phenomena.

PHYS 218 Physics for Wood Products — see PHYS 118.

TCOM 101 Introduction to Technical Communication — This course covers basic writing and speaking skills needed for communicating technical information in industry. Students learn how to organize messages, illustrate documents, define and describe mechanisms and processes; write memos, letters, and instructions. Students also prepare and deliver oral presentations.

TCOM 207 Technical Communication for Wood Products — Further prepares students for writing for the lumber and plywood industry. Students write letters, job application letters, resumes, proposals, progress reports and a technical report done jointly with an engineering course. Students also learn interview techniques. Prerequisite: TCOM 101.

TCOM 305 Advanced Technical Communication for Wood Products — Students review and practice technical reporting. They write several memos and a Summer Technical Report which is marked jointly by the instructor and people employed

in the lumber and plywood industry. They practice illustrating, revising and editing skills, and present an oral technical report. Prerequisite: TCOM 101, TCOM 207.

TCOM 403 Advanced Technical Communication for Wood Products — Students write technically advanced material typical of the forest products industry. They update their resumes and job application letters and write technical definitions and descriptions, procedures, instructions, trip reports and technical letters. They write one long report based on observations in a mill, in conjunction with an engineering course. Prerequisite: TCOM 101, TCOM 207, TCOM 305.

RENEWABLE RESOURCES

Forestry Fish, Wildlife and Recreation Forestry Crewperson Natural Resource Management Tree Trimmer

British Columbia's greatest natural renewable resource is its forest land. The benefits which derive from intelligently planned use of this forest land are many, varied and extremely valuable. Wise use of the land and related resources is essential for the continued survival of many industries, as well as for the perpetuation of the resources themselves. The Renewable Resources Technology programs have been established to meet these needs and offer training in two programs: **Forestry** and **Fish, Wildlife and Recreation**.

Job Opportunities

Graduates in the Forestry Option find employment in a variety of industrial and government positions.

The job opportunities for graduates in Fish, Wildlife and Recreation are principally in government agencies and, because of the limited number of jobs, the number of students is restricted.

The Programs

Forestry covers forest management; botany, ecology and soils; photo interpretation and mapping; silviculture and reforestation; protection and fire management; measurements; engineering, logging production and utilization.

The program is accredited at the technologist level by the Applied Science Technologists and Technicians of B.C.

Fish, Wildlife and Recreation covers the management of fish, wildlife and wildland recreation and includes habitat ecology, environmental inventory techniques and law enforcement with respect to these resources.

When course credits are given, electives will be chosen in consultation with the Program Head.

Prerequisites

*The following are **minimum** requirements: Algebra 11 with C+; a Science 11 (for F.W.R. option must be Biology 11); any one of another Science 11, or a Science or Algebra 12. Work experience in natural resources strengthens an application for either of the programs. *Out of province and mature student applications will be reviewed by the Associate Dean.

Expenses

In addition to tuition fees, books, supplies and equipment, students will incur expenses for field trips and a first-aid course. These expenses may be \$500 for first year and \$600 for second year.

TCOM 415	Public Information Techniques for FWR	3.0

* a two-week course

Course Descriptions

BISC 224 Zoology — General classification of the animal kingdom. Basic vertebrate zoology. The development of the vertebrate from embryo to adult. The study of the vertebrate body including the skeletal, muscular, digestive, circulatory, urogenital and endocrine systems.

FSTR 101 Natural Resource Measurements — Concepts of field measurement and basic surveying. Includes field note-taking, traverse calculations and plotting, sketching of topographic detail, horizontal and vertical error corrections, differential levelling of roads and streams, latitude and departure calculations of traverses, map assembly field notes, lake volume and area measurements, and sampling for population estimates. Emphasis is on field labs with supporting lectures.

FSTR 103 Plant Identification — The structure, physiology, taxonomy and uses of plants, with emphasis on those having important biological and economic significance in the biotic zones of B.C. Introduction to reproduction of plants with particular emphasis on conifers. Recognition and evaluation of common plants in forest, range land and alpine habitats of British Columbia and their uses in land management practices. A plant collection containing at least 75 native plant species is required from students.

FSTR 104 Photo Interpretation and Mapping 1 — Practical use and application of aerial photography in natural resources. Classification, reconnaissance, planning and inventory using aerial photos. Practice in the use of stereoscopes. Construction of forest maps and plans. Transfer of detail from aerial photos using Map-O-Graph, Kail plotters and pantographs. Drafting and map reproduction techniques. Continues in FSTR 204.

FSTR 106 Microcomputer Applications — Introduction to computers and their applications to various forestry, fish, wildlife and recreation requirements.

FSTR 108 Introduction to B.C. Natural Resources — Provides basic background material on B.C.'s land and climate regions, major natural resources, the agencies and industries involved with such resources, and their relative value to the province. The evolution of each resource industry and the current relevant legislation is discussed. The fields of fisheries, forestry, range, wildlife, agriculture, parks and recreation, tourism, mining, gas and oil, and hydro power are explored. Resource integration processes are discussed and relevant tenure systems are described. The need for cooperation and understanding among resource users is emphasized.

FSTR 201 Forest Measurement 1 — Continuation of FSTR 101. Methods of measuring standing and felled timber. Direct measurement of tree diameter, height and age. Field mapping. Characteristics and uses of standard volume tables. Construction of local volume tables. Types of sampling and design and elementary statistical analysis. Compilation methods for sample data. Computer use for data summary. Report writing. Prerequisite: FSTR 101, FSTR 104, and MATH 145; or instructor's approval.

FSTR 202 Introduction to Soils — Introduces students to soil formation, soil as foundation and soil as a medium for plant growth. Covers the properties of soils; texture, structure and organic matter content, and water retention. Introduces students to the soils and landscapes of British Columbia. Prerequisite: Level 1 of the program or instructor's approval.

FSTR 203 Ecology — Introduction to basic concepts and terminology of ecology. Discusses ecosystem components, energy flow and management of ecosystems. Students will identify numerous terrestrial and aquatic ecosystems. Emphasis is placed on the Biogeoclimatic Zone System of B.C., and on field identification of ecosystem associations, their productivity and management constraints. Forest succession, the role of fire, fish and wild life habitats, and recreational planning are discussed. Examples are drawn from current environmental issues. Prerequisite: FSTR 101, FSTR 103, and FSTR 108; or instructor's approval.

FSTR 204 Photo Interpretation and Mapping 2 — see FSTR 104. Prerequisite: FSTR 104, and MATH 145 or 154; or instructor's approval.

FSTR 205 Fire Management 1 — Historical review of fire behavior simulated to show the effects of topography, fuel and weather conditions. Pre-suppression, including fire-danger ratings, detection, reporting and general preorganization of industrial and government agencies. "Forest Act", Part XI. Fire suppression techniques through fire simulation and prescribed burning training in initial action and problem-solving.

FSTR 207 Introduction to Fish, Wildlife and Recreation — Basic identification of various fish and wildlife and their importance and interaction with other natural resources.

FSTR 208 Integrated Resource Project — This course is an intensive one-week project, in which students from the Forestry and Fish, Wildlife, Recreation Options work together in teams to produce integrated resource use plans for a specific watershed. L.R.U.P. (Local Resource Use Plans) data and appropriate environmental, fish, wildlife, recreational, logging, silvicultural and financial information is presented by staff to implement first year course material. Each term prepares a plan, presents it with visual aids, and engages in a public involvement process. An industry/agency group provides the final review.

FSTR 301 Forest Measurement 2 — Continuation of FSTR 201. Field reconnaissance; forest timber volume measurement and calculation; sampling design; field mapping; data compilation; report writing. Subjects include current cruising procedures, acceptable sampling design, elementary statistical analysis, computer application for data summaries. Prerequisite: FSTR 201 or 251, FSTR 204, MATH 245; or instructor's approval.

FSTR 302 Timber Harvesting 1 — This course deals with common harvesting systems used on the B.C. coast and includes associated phase costs, setting and landing layouts, deflection lines, environmental and safety aspects, and some discussion of integrated resource planning. The field project takes several labs to complete and concludes with a mini-contract to harvest and re-forest the given area. Other topics in the course relate to harvesting on the coast as well as the interior. Prerequisite: 1st year Forestry or instructor's approval.

FSTR 303 Roads and Transportation 1 — Truck road location. Preparation of plans and profiles. Measurement of earth and rock work. Optimum road standards, culvert design, construction and maintenance. Prerequisite: 1st Year Forestry or instructor's approval.

FSTR 304 Forest Pestology — An integrated study of forest insect and disease problems. Basic life histories. The interactions of damage agencies in the forest. Improved sampling techniques related to insect and disease damage. Use of subject literature. Cooperation with appropriate agencies. Prevention and control of damage. Measuring and reporting of insect and disease damage. Recognition of the currently important insects and diseases. Prerequisite: 1st year Forestry or instructor's approval.

FSTR 305 Silviculture 1 — Foundations of forest management: site, stocking, spacing, forest yield, forest growth and regulation. Introduction to silviculture: forest regeneration, seed and stock procurement, principles of seed production and cone collection. Prerequisite: FSTR 103, 202 and 203; or instructor's approval.

FSTR 307 Recreational Land Management — An introductory course in recreational land management. Development and recreational use of areas designed as parks. Survey of outdoor

recreation, history and organization of agencies providing recreational activities in parks. Park development, planning and design. Practical exercises in site analysis, planning and design for specific uses. Park and natural history interpretation. Park operation and administration. Assessment and development of recreational areas both in and out of established parks. Recognition of recreational sites by aerial photo interpretation of landforms. Private and public programs in forest recreation. Land tenures and land acquisition for recreation. Visual resource management. Summer and winter sports area developments. Water-oriented activities, trail design, mountaineering, search and rescue. The packaging of outdoor recreation opportunities including the operation of hunting and fishing camps, guided hikes and commercial rafting companies. Attendance at a weekend seminar on Tourism and Outdoor Recreation is mandatory. Prerequisite: 1st year of the program or instructor's approval.

FSTR 308 Wildlife Management — The principles and practice of wildlife management, with particular reference to problems and procedures in British Columbia wildlife environments. Dynamics of wildlife populations. Methods of study. Harvesting. Regulations. Natural and artificial regulation of animal numbers. Diseases and parasites. The economics of wildlife, particularly in forest habitats. Extensive field study to support and extend lecture and lab material. Prerequisite: 1st year of the program or instructor's approval.

FSTR 309 Fish Management 1 — The biology of British Columbia fish, including anatomy, taxonomy, physiology, behavior and ecology. Management aspects of fisheries including population dynamics, habitat evaluation and improvement, harvesting, pollution and fishery regulations. Labs deal with methodology as it applies to the above and much of the training will be done in the field. Emphasis throughout is on the British Columbia situation. Prerequisite: 1st year of the program or instructor's approval.

FSTR 310 Projects — The student selects a topic of interest and prepares a field-oriented study plan. A major library research paper is prepared using the Council of Biological Editors' (CBE) style format. This work is continued in FSTR 410. Prerequisite: 1st year of the program or instructor's approval.

FSTR 311 Summer Technical Report — A detailed report on a phase of resource management from first-hand experience, or from approved library research.

FSTR 312 Environmental Law Enforcement — Deals with the many aspects of interpretation and enforcement of legislative acts relating to the management of Canada's wildland resource. Among these are the "Fisheries Act", "Parks Act" and the "Wildlife Act".

FSTR 326 Forest Management — Forest tenures and policy in British Columbia, growth, yield and regulation of coastal Douglas Fir stands, calculation of coastal and interior stumpage appraisal, introduction to timber supply area management, development of a forest management and working plan for a tree farm licence, development of an integrated resource management plan.

FSTR 402 Timber Harvesting 2 — Deals with harvesting systems in use in the interior of B.C. and includes various logging phases and associated costs, log production planning and scheduling, cost equalization points and interest. In addition, contracts and contract logging, forest landscape planning, and industry and government relationships in managing our resources, will be discussed. There will be field work associated with the course and an important logging research report and oral presentation. Prerequisite: FSTR 302.

FSTR 403 Roads and Transportation 2 — Simple log span bridge design, construction and maintenance. Explosives. Truck road construction, maintenance and costing. Hauling costs. Log dumps, sorting logs on water or land. Booming grounds. Water transportation of logs. Prerequisite: FSTR 303.

FSTR 404 Forest Pestology — see FSTR 304. Prerequisite: FSTR 304 or instructor's approval.

FSTR 405 Silviculture 2 — Site examination, analysis and prescriptions; site preparation, planning methods, evaluating artificial regeneration, methods application; contract, planting, costing and inspection; brush control methods and application; spacing methods and evaluation; conifer release, application; fertilization, methods and application. Prerequisite: FSTR 305 or instructor's approval.

FSTR 407 Recreational Land Management — see FSTR 307. Prerequisite: FSTR 307 or instructor's approval.

FSTR 408 Wildlife Management — see FSTR 308. Pre-requisite: FSTR 308 or instructor's approval.

FSTR 409 Fish Management 2 — see FSTR 309. Prerequisite: FSTR 309 or instructor's approval.

FSTR 410 Projects — This is a continuation of the work begun in FSTR 310. The student conducts a professional field research study and prepares a final report of a quality suitable for publication. Prerequisite: FSTR 310 or instructor's approval.

FSTR 413 Independent Studies — Offers an opportunity to student groups or individuals to become involved in a subject area or work which is of special interest to them. Each student will select a subject area and devote two full weeks to fulfil the requirements of the course, under the direction of a staff member. The student must submit a memo, project outline, daily journal, and report of acceptable standard to the Independent Studies Committee before the designated deadlines. The course occurs during the last two weeks of term 4, after final exams have been written.

FSTR 414 Log Scaling — A metric log scaling course, with instruction occurring primarily on log booms in the Fraser River and theory reinforced through classroom sessions. The course includes species recognition, volume calculation, deduction for defect and grading of logs. Visits to conversion facilities to observe lumber recovery, shake and shingle production and veneer manufacturing from logs will be included.

FSTR 415 Fire Management 2 — see FSTR 205. Prerequisite: FSTR 205 or instructor's approval.

FSTR 416 Natural Resource Administration — Many of the functions once performed by government agencies and industry in the natural resource field are now being contracted out. This course is designed for people interested in embarking on a career in service contracting to the natural resource industry. Upon successful completion of this course, the student will have a basic knowledge of small business planning, be able to read and understand financial statements, understand simple double-entry accounting principles, be able to project a business plan for entrepreneurial activities and develop estimates for contract work.

FSTR 426 Forest Administration — See FSTR 416.

MATH 145 Basic Technical Mathematics for Forest Resources — Systems of measurement, mensuration, trapezoidal and Simpson's rules. Angular systems, radian measure applications, trigonometric ratios and Sine/Cosine laws. Ratio, proportion and variation. Polynomials, formulae, functions and their graphs. Graphical linear programming. Vectors and applications. Introduction to descriptive statistics with histograms and ogives.

MATH 154 Basic Technical Mathematics for Fish, Wildlife and Recreation — Systems of measurement, mensuration, trapezoidal and Simpson's rules. Angular systems, radian measure applications, trigonometric ratios and Sine/Cosine laws. Ratio, proportion and variation. Polynomials, formulae, functions and their graphs. Graphical linear programming. Vectors and applications. Introduction to descriptive statistics with histograms and ogives.

MATH 245 Mathematics 2 for Forest Resources — Further descriptive statistics. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Estimation, hypothesis testing, count data analysis and stratified sampling analysis. Regression and correlation including related estimation.

MATH 254 Statistics Fish, Wildlife and Recreation — Organization and presentation of data, frequency distributions and measures of central tendency; variation, skewness and kurtosis. Probability theory and laws. Random variables, discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Analysis of variance. Method of least squares, regression and correlation, and curve fitting. Some non-parametric statistics.

TCOM 101 Introduction to Technical Communication — In this course students practice writing skills applicable to the forest resource industry. Instruction, claim, request and adjustment letters and process and mechanism descriptions are covered. They also practice technical library search techniques and oral briefings.

TCOM 115 Technical Communication — Introduces students to technical and scientific communication skills required for a career in FWR. They study the principles of effective technical communication, business and technical formats, correspondence, short reports and research techniques for fish, wildlife and parks management topics.

TCOM 206 Technical Communication — Students write incident, progress, comparison and formal technical reports. They also write a proposal, resume and job application letter. They practice formal meeting, interview and research techniques and are exposed to word processing. Prerequisite: TCOM 101 or instructor's approval.

TCOM 215 Advanced Technical Communication — Students refine job finding skills and update their resumes and application letters. They practice specialized formats and write lengthy technical and scientific reports typical of fisheries, wildlife and parks management. Prerequisite: TCOM 115 or instructor's approval.

TCOM 315 Advanced Technical Communication — In this course, students review writing skills and apply them to the Summer Technical Report, a major report marked both by the instructor and employers who are Institute graduates. Students also practice revision and editing skills, write several memos and give a major oral technical report. Prerequisite: TCOM 115, TCOM 215 or instructor's approval.

TCOM 402 Advanced Technical Communication — Students update their resumes and job application letters. They also write procedure, progress and trip reports, journal and several types of advanced business letters typical of the forest industry. They practice graphics, analytical and organizational skills and write a major report about logging equipment done in conjunction with the logging course. They receive up-to-date information and practice in word processing. Prerequisite: TCOM 101, 206, 304 or instructor's approval.

TCOM 415 Public Information Techniques for Fish, Wildlife and Recreation — In this course, students study specialized principles and techniques for communication with the public through interpretive and educational programs and the media. They write promotional data, news releases and journal articles. They practice public speaking, preparing graphic displays, interview techniques and interpretive program design. Prerequisite: TCOM 115, TCOM 215, TCOM 315 or instructor's approval.

Natural Resource Management

Post-diploma Program

This post-diploma program is designed to meet the needs of resource technologists who wish to broaden their knowledge of the major natural resources of British Columbia.

The Program

This nine-month program (two terms) examines the natural resources of British Columbia and the needs, constraints and methods to manage these resources in the best interests of the province. Included will be fish, wildlife, recreation, rangeland, hydrology (water), agriculture, mining, tourism and their interdependencies (natures).

When course credits are given, electives will be chosen in consultation with the Program Head.

Prerequisites

Graduation from a BCIT diploma program or a two-year college program in an engineering or business technology. Baccalaureate degree in bioscience, engineering, geography or geology will also be considered.

PROGRAM: Natural Resources

		Clrm hrs/wk
Level 1		
FSTR 501	Fish Resource	2.0
FSTR 502	Rangeland Management	4.0
FSTR 503	Hydrology and Geomorphology	4.0
FSTR 504	Forest Land Management	6.0
FSTR 505	Interdependent Resources	4.0
FSTR 506	Projects, Special Topics and Current Issues	6.0
FSTR 507	Wildlife Resource	2.0
FSTR 508	Recreation Resource	2.0
TCOM 501	Management Communications	2.0
Level 2		
FSTR 601	Natural Resource Planning	6.0
FSTR 602	Environmental Impact Assessment	6.0
FSTR 603	Environmental Law and Public Relations	3.0
FSTR 604	Natural Resource Economics	5.0
FSTR 606	Projects	5.0
*FSTR 613	Independent Studies	60.0
TCOM 615	Management Communications	2.0
	Electives	4.0

* a two-week course

Course Descriptions

FSTR 501 Fish Resource — The identification, habitat and life cycles of British Columbia's fish. The principles and practice of management, and the importance of interaction with all other resources.

FSTR 502 Rangeland Management — Includes identification of common range plants, knowledge of range distribution, types of range, productivity intensity and variety of uses, assessment of productivity and stocking, range reclamation,

season of use, impact on the forest resource and non-grazing use of range land.

FSTR 503 Hydrology and Geomorphology — Assumes a basic knowledge of the factors that have shaped the earth and of the hydrologic cycle. The course includes a review of the broad landforms of B.C. and their evolution, and a consideration of the sensitivity of representative landforms to various types of development. Some aspects of the hydrology of forested ecosystems are discussed and specific effects of natural resource use on hydrological systems are presented.

FSTR 504 Forest Land Management — Designed for non-forestry students, it includes background in most second year forestry courses including forest tenure and policy in the Province of British Columbia, concepts in integrated resource use policy and management, timber supply area management and planning, operational planning with integrated resource considerations, and basic background information relating to pestology and silviculture.

FSTR 505 Interdependent Resources — A conceptual overview of other non-forested resources such as agriculture, mining, water, tourism, etc. Includes an introduction to the use of microcomputers in the processing of natural resource management data and an exposure to pesticide safety, use and abuse.

FSTR 506 Projects, Special Topics and Current Issues — Will include discussions and use of guest lectures or visits relating to current resource topics/issues. A project will be selected by each student from any of these topics or one of his own choosing in the resource field. The assessment of the student will be based on the written descriptions and reports submitted for the project. Ideally, the project will involve an analysis of a problem, issue or situation, followed by research toward a solution to be reported on in FSTR 606.

FSTR 507 Wildlife Resource — The identification, habitat and life cycles of British Columbia's wildlife and their management, within the framework of integrated resource management.

FSTR 508 Recreation Resource — The principles and practice of recreational land management. Tourism as related to outdoor recreation.

FSTR 601 Natural Resource Planning — The emphasis is on integrated resource use. Guest lecturers with expertise in resource planning may be included as part of the instructional team. The course will emphasize integrated resource planning analysis by examining the planning systems used by various resource agencies. Examples of procedures from various levels of planning will be considered and practised in the field. The student will be required to carry out data collection and analysis for some planning functions.

FSTR 602 Environmental Impact Assessment — Assessment of environmental impact and inventory techniques.

FSTR 603 Environmental Law and Public Relations — The court system in B.C.; review of various provincial and federal resource Acts; two case studies; court attendance; written decision on assigned cases.

FSTR 604 Natural Resource Economics — Includes economic concepts as applied to various natural resources and relationships to consider in cost/benefit analysis.

FSTR 606 Projects — see FSTR 506. Prerequisite: FSTR 506.

FSTR 613 Independent Studies — This course offers an opportunity to student groups or individuals to become involved in a subject area or work which is of special interest to them. Each student will select a subject area and devote two full weeks to fulfil the requirements of the course, under the direction of a staff member. The student must submit a memo, project outline, daily journal and report of acceptable standard to the Independent Studies Committee before the designated deadlines. The course occurs during the last two weeks of Term 4, after final exams have been written.

TCOM 501 Management Communication — This course introduces techniques for effective written and oral technical communication on the job. Emphasis is on reporting technical information in the natural resource management field.

TCOM 615 Public Information Techniques — In this course, students learn specialized techniques for communicating with the public through interpretive and educational programs and the media. They write promotional data, news releases and journal articles. They practice public speaking, preparing graphic displays, interview techniques and media programs.

Forestry Crewperson

The Program

Students are taught both the theory and practical skills required by the forest industry; emphasis is on practical field work. Students will learn forest regeneration, survival and pre-juvenile spacing; site preparation and cone collection. They will acquire the skills necessary to use the power tools, hand tools and mechanical equipment required for clearing, spacing and planting. Recognition of common insects, diseases and undesirable species, concluding with the Pesticide Application Control program, are all part of the intensive training provided.

Program Content

Site preparation
Forestry division organization
Intensified forestry
Regeneration, survival and pre-juvenile spacing surveys
Traversing
Power chain saw safety and maintenance
Maintenance of personal physical condition
Cone collection
Tree planting
Exposure to common insects and diseases
Recognition of problem areas
Mechanical juvenile spacing
Undesirable species control
Pesticide Application course
Survival first aid course

Length of Program 13 weeks

Normal Course Hours: 0830-1530

Prerequisite

Grade 10. Excellent physical condition is essential. Must have a good working knowledge of the English language.

Career Potential

Forestry crewperson training provides the opportunity to work outdoors for others or to become a contractor. Opportunities exist for employment with federal and provincial governments, large forest companies, industrial research companies and many private companies.

Instructor

Roald Kley

Tree Trimmer

The Program

This is a practical hands-on course dealing with operation, maintenance and safety of tree trimming and climbing operations.

Program Content

Chainsaw operation	Climbing
Survival first aid	Live wire operations
Chipper operation	Pruning
Ground safety	Roping, topping for limb removal
Falling and bucking	Rescue
Boom truck operation	

Length of Program

20 days (for those applicants who can document proof of a Survival First Aid course)
21 days (for applicants who have not previously completed a Survival First Aid course)

Prerequisite

Applicants should have a minimum of THREE months experience in tree trimming and furnish a letter from an employer to substantiate this prerequisite. Graduates from the Forestry Crewperson program are also acceptable applicants.

Priority placement into the program is given to those applicants who can provide a "letter of intent" from an employer. This letter must be on company letterhead and indicate that the employer is willing to provide the applicant with 1200 hours of supervised climbing and trimming near energized lines.

Career Potential

W.C.B. Survival First Aid Certification. Successful completion of the program, plus 1200 hours of supervised climbing and trimming near energized lines, plus successful completion of the Tree Trimmer course, are required before you write an examination for certification by the Ministry of Advanced Education and Job Training. This certificate is usually required for employment with B.C. Hydro or contractors who work for B.C. Hydro.

Special Equipment

Students should bring their personal rain gear, climbing boots and personal safety gear (hard hat, eye/ear protectors, slash pants). Students need standard lineman's boots. A chainsaw should be brought by each student.

Basic Health Sciences

This department provides courses in human anatomy and physiology, immunology, microbiology, pathophysiology, sociology, organizational psychology, and human development for students enrolled in the School of Health Sciences. These courses are designated by the prefix BHSC and are listed and described in the following health technology entries. Each course is oriented towards a particular technology so that, although the material studied may be introductory in nature, the student quickly becomes aware of applications. In many cases these courses are the foundation upon which specific technology subjects are built. The department's responsibility, therefore, is to teach those concepts of biological and behavioral sciences which provide the student and graduate with the knowledge and comprehension to meet the present and the future challenges of the modern health worker.

Biomedical Electronics Technology

Program Objectives

The objective of the program is to graduate technologists with the ability to ensure safe and correct performance of equipment used in medicine and biology. The curriculum covers physiological monitors, defibrillators, electrosurgery units, chemistry and clinical laboratory instrumentation, radiology equipment, ultrasound imaging machines and other electro-medical diagnostic and therapeutic devices.

Employment Opportunities

Graduates of the Biomedical Electronics Program may be employed in hospitals, clinics, research labs and medical equipment sales and service organizations.

Biomedical Electronics Technologists may be responsible for scheduled and corrective maintenance and safety inspection of electro-medical equipment, as well as participate in research and development, purchase specification, equipment evaluation and operator training.

The Program

Graduates from the Biomedical Electronics Technology Program receive a National Diploma of Technology. The Biomedical Electronics Program provides education and training in the following subject areas: technical communications; algebra; calculus; statistics; basic chemistry, organic chemistry, biochemistry and analytical chemistry; human anatomy and physiology; biophysics; electricity and electronics; biomedical electronics; digital techniques and microprocessor applications. This exposure allows the graduate to work in close association with biomedical engineers, physicians and others who use, maintain, design and supply scientific and medical equipment. During the second year, each student spends four weeks in supervised clinical training in a local hospital, research agency or equipment supply firm.

Throughout the program, emphasis is placed on practically-oriented instruction. "Hands-on" laboratory experience is provided and students are trained in engineering problem-solving methodology to allow them to upgrade and maintain their knowledge.

Memberships in the Canadian Medical and Biological Engineering Society (CMBES) and the Applied Science Technologists and Technicians of British Columbia (ASTTBC) are recommended.

The Biomedical Electronics program is accredited by ASTTBC. Graduates are eligible for registration as Applied Science Technologists (A.Sc.T.) after two years of relevant work experience following graduation.

Prerequisites

- High School graduation with a minimum of C+ in Algebra 12, Physics 11 and Chemistry 11.
- Selection interview with program instructors.
- Applicants with relevant practical experience or special background may be considered.

PROGRAM: Biomedical Electronics

Most courses taken within the program require successful completion of certain prerequisites. For further information contact the Registrar's Office.

Course Descriptions

BHSC 202 Human Anatomy and Physiology — The basic structure and function of the human body is discussed using the systems approach. The cell's role as the unit of structure and function is emphasized. Emphasis is also placed on the regulation of body functions and the role of control systems in homeostasis. Examples of the uses of biomedical instrumentation in diagnosis and treatment are given.

BMET 100 Electronics Principles and Practice 1 — Provides students with basic knowledge of electrical quantities, their units and relationships. The course includes DC circuit analysis techniques for R, RC, RL and RLC circuits; AC circuit analysis for R, RC, RL circuits. Examples of applications to biomedical electronics are included. Lab exercises are coordinated with course content.

BMET 200 Electronics Principles and Practice 2 — Analyzes the properties of passive RLC circuits and introduces basic active devices and integrated circuits. Topics include RLC resonant circuits, bipolar transistor and FET fundamentals, discrete amplifier circuits (single and multistage), amplifier stability, Miller effect, power amplifiers, oscillators, power supplies, regulators, IC regulators, differential amplifiers. Prerequisite: BMET 100.

BMET 300 Electronics Principles and Practice 3 — Covers topics such as integrated circuit components and the uses of various other semiconductor components, e.g. Op Amp, FET, SCR, opto-electronics components, timers, etc. Lab exercises are coordinated with course content. Prerequisite: BMET 200.

BMET 301 Biomedical Electronics 1 — Introduces students to basic properties of biomedical signals: collecting (transducers), processing, displaying and recording. The design, construction and operation of physiological diagnostic/monitoring equipment will be presented through both block and schematic diagrams. Electrical safety, as it relates to biomedical equipment and patient care environments, will be emphasized throughout the course. Equipment control and work environment considerations are included. Lab exercises are coordinated with course content. Prerequisite: BMET 200, BHSC 202.

BMET 310 Digital Electronics 1 — A study of basic digital techniques. Topics include switch and relay control; numbering systems; Boolean algebra; logic synthesis; codes and coding; solid state logic (TTL, CMOS, etc.); noise and loading; encoders, decoders, relay drivers and delay devices; counters, shift registers and arithmetic systems; A/D and D/A conversion, multiplexing. Prerequisite: BMET 200.

BMET 401 Biomedical Electronics 2 — Various electronic equipment used in the biomedical environment is presented through block diagrams. Selected equipment is covered in more detail with schematic diagrams (e.g. electrosurgical, telemetry and cardiac resuscitation equipment.) Electrical safety considerations of all equipment studied will be presented. Lab exercises, coordinated with course content, emphasize calibration and repair techniques. Prerequisite: BMET 300, BMET 301, BMET 310.

BMET 402 Biomedical Electronics Project — Students will build a device such as an ECG simulator using the latest technology and design techniques. Students will gain experience with the actual implementation of a project such as planning, designing, material acquisition, prototyping, printed circuit designing, construction, testing, calibration, commissioning and evaluation. A technical report for the project is also required. Prerequisite: BMET 300, BMET 301, BMET 310.

BMET 403 Medical Imaging — Introduces the concepts involved in imaging systems used in medicine. Equipment examined includes that in X-ray, nuclear medicine, and ultrasound. Prerequisite: BMET 300, BMET 301, BHSC 202.

BMET 410 Digital Systems and Microprocessors — An introduction to microprocessor hardware and software. Topics to be covered: digital arithmetic, memories and mass storage devices, microprocessor architectures, memory and I/O decoding, I/O techniques, interrupts, DMA, LSI/VLSI peripheral chips, data communications, memory management and virtual memory, instruction sets, software development methods, subroutines, data types, operating systems, editors, assemblers, linking loaders, and introduction to a high level language as a microprocessor development tool. Prerequisite: BMET 300, BMET 310.

BMET 420 Practical Experience in Biomedical Electronics — During this period of training, students gain practical experience in biomedical electronics and related fields while working under supervision at a number of hospitals, research agencies and private companies throughout the province. The work experience portion of this course is four weeks in duration. Prerequisite: BMET 300, BMET 301, BMET 401, BMET 402, BMET 403, BMET 410.

CHEM 107 Chemistry for Biomedical Electronics — Covers basic general chemistry. The course includes stoichiometry, nomenclature, concentrations of solutions (molarity, molality, equivalent weight, PPM, percent), acid-base chemistry (strong and weak electrolytes, buffers, hydrolysis of salts) and electrochemistry (oxidation, reduction, voltaic cells, nernst equation). The laboratory part of the course which runs parallel with the lectures consists of quantitative analysis, both gravimetric and volumetric.

CHEM 207 Introduction to Organic and Biochemistry for Biomedical Electronics — This course gives an introduction to organic and biochemistry. The naming, properties and main reactions of the major classes of organic compounds are discussed. The biochemistry includes both the chemistry and metabolism of fats, proteins and carbohydrates. Lab work includes techniques and synthesis in organic chemistry and biochemical techniques frequently encountered in the clinical lab, e.g.: spectrophotometry, chromatography, electrophoresis. Prerequisite: CHEM 107.

CHEM 411 Instrumental Analysis for Biomedical Electronics — Introduces basic theoretical concepts, instrument components and operation, and general application of the following methods: potentiometric absorption, flame absorption and emission, fluorescence, gas and liquid chromatography and automated analysis. Prerequisite: CHEM 207.

ELEC 152 Measurement for Biomedical Electronics — Safety in electrical measurement techniques is emphasized throughout this course. Topics: error percentage and prediction, standards and calibration, device testing, analog and pulse signals, electrical noise, earthing, understanding service manuals. Equipment used: analog and digital meters, function and signal generators, bridges, frequency counters, curve tracers, oscilloscopes and attachments.

ELEC 252 Measurement for Biomedical Electronics — An orientation course covering basic devices for measuring pressure, temperature, density and flow. A study of the principles of analysis instruments, using potentiometric, amperometric and polarographic techniques; ultraviolet, visible and infrared spectroscopy; flame photometry; paper and column chromatography; electrophoresis and refractometric methods. Concept of regulation and feedback control.

ELEC 259 Video Fundamentals — An introductory course covering the basic principles of video display. Topics include raster scan, industrial composite video signals, character generation, video projects.

GNNU 182 Patient Care — Introduces students to the hospital environment and the basic safety concepts of patient care. It includes observation and communication skills, body mechanics, fire safety and medical and surgical asepsis.

HCOM 104 Technical Writing for Biomedical Electronics — Emphasizes clear, correct, health-oriented technical writing for biomedical electronics technologists. Students will learn how to organize and sequence technical information, illustrate documents, describe and define technical material, write direct letters and memos, write a professional resume and application letter, and summarize reports and articles.

HCOM 203 Technical Writing for Biomedical Electronics — A continuation of HCOM 104. This term students will write and present orally hospital-oriented and industry-oriented memo reports, and write and present a longer, formal technical report. This term focuses on professional communication. Students will learn how to use the Wang word processing system to write reports and use medical terminology correctly.

HCOM 301 Advanced Communication for Biomedical Electronics — Designed to help biomedical electronics students complete the writing portion of technology assignments and projects successfully. Because the course content is, in part, determined by technology assignments, it will vary. The instructor and students work as editor and writers in the writing and revising of technology assignments. In addition, students will update resumes to graduate level requirements, as a separate part of the course.

MATH 178 Basic Technical Mathematics Biomedical Electronics — Systems of linear equations, determinants, matrices, types of systems and application to electrical networks. Polynomial curve fitting, loop analysis, and T to Y transformations. Common and natural logarithms, logarithmic/semilogarithmic graphs, decibels, and exponential growth and decay. Trigonometric functions, solution of triangles and graphing and addition of sinusoidal functions. Complex numbers, rectangular/polar transformations, phasor representation of sinusoidal waveforms and AC circuits.

MATH 278 Calculus for Biomedical Electronics — Limits, the derivative, differentiation rules, applied maxima/minima, curve sketching, and differentials with applications to electrical technology. Antidifferentiation, the indefinite integral and the definite integral including area, mean value and RMS value. Differentiation and integration of trigonometric, logarithmic and exponential functions. Fourier series. First and second order differential equations applied to electrical circuits. Basic arithmetic and functions, input/output, branching, strings, arrays and files. Arithmetic in other bases, logic gates and corresponding Boolean algebra, truth tables, Karnaugh maps, logic circuit design and binary addition/subtraction.

MATH 378 Statistics for Biomedical Electronics — Provides students with basic knowledge of statistics. Topics include random sampling, measurement and rounding, frequency distributions, measures of central tendency, measures of dispersion, normal distribution, ranks and percentiles. Estimation, central limit theorem, standard errors, confidence intervals, hypothesis testing, null and alternate hypothesis, large sample hypothesis testing, t-distribution, small sample hypothesis testing and non-parametric testing will also be covered. Computer packages will be discussed.

PHYS 324 Biophysics — This is a general level course in basic physics with emphasis on applications to biological systems. The topics covered are mechanics, heat, sound and light, with related applications. Various biological systems are studied with reference to the physical principles involved in both their development and function.

Faculty and Staff

George Eisler, M.A.Sc., P.Eng., M.B.A., Associate Dean

M.J. Barrett, Dipl.T.A. Sc.T.

P.K. Chiu, B.Eng., M.Sc., Ph.D., P.Eng., Program Head

A. Nichols, B.A.Sc., P.Eng.

Electrophysiology Technology

Modern hospitals and health care clinics require the services of trained technologists to operate sophisticated electroneurophysiological testing equipment and other related biomedical equipment. In order to understand the operation of this equipment, the graduate will have studied mathematics, physical science and engineering subjects. Course work in the basic health sciences will inform the student about human physiology and the biological signals to be measured. In addition, course work in the social sciences will prepare the student for interpersonal relationships with the clinical environment. Extensive clinical experience is built into the program to ensure that the student develops necessary practical skills in the work environment.

Job Opportunities

Graduates of the Electrophysiology Program will find employment in hospitals or private clinics in the following fields: electroencephalography (electrical activity of the brain), electromyography (electrical activity of the neuro-muscular system), and evoked potentials (activities generated by stimulation of the sensory systems) which include electronystagmography, visual evoked response and brainstem auditory evoked response. Graduates will principally find employment in the Neurophysiology Departments of hospitals. In addition to performing a wide variety of tests on patients, the graduate will be expected to evaluate the results in order to assess the performance of the test equipment. In addition to an ongoing evaluation of performance, the graduate will perform quality control procedures on equipment and basic calibration/maintenance functions.

The Program

The program is a combination of lab and lecture instruction at BCIT and clinical experience in the Neurophysiology Departments of major hospitals.

In both spring and fall terms, special courses in Electrophysiology and Neuroanatomy and Neurophysiology will train students in the basics of biological signal measurement and clinical apparatus. In the spring term (20 weeks) different areas of clinical experience will be covered: electroencephalography; electromyography; audiology; ophthalmology and other evoked potentials.

Upon successful completion of the two year program, the student will receive a National Diploma of Technology in Electrophysiology. After a period of work experience in a clinical situation, students will become eligible to write the National Certification Examinations of the appropriate certifying body of their chosen fields of interest.

Prerequisites

Algebra 12, Physics 11 and Chemistry 11 all with C+ are the course requirements for this program. Individuals wishing to enter this field should be interested in the welfare of people, and should have an aptitude for physics, electrical and mechanical apparatus. Applicants who have special background and/or experience will also be considered on an individual basis. Most courses taken within the program require successful completion of certain prerequisites. For further information contact the Registrar's office.

Most courses taken within the program require successful completion of certain prerequisites. For further information contact the Registrar's Office.

Course Descriptions

BHSC 111 Anatomy and Physiology — A basic introductory course in human anatomy and physiology, which uses the systems approach. It provides the electrophysiology technology student with terminology and physiological concepts likely to be encountered during the first term of the program.

BHSC 212 Anatomy and Physiology — Builds on information given in BHSC 111, which is prerequisite. Emphasis is placed on that human anatomy and physiology of most interest to the electrophysiology technology student. Special attention is given to the nervous, neuromuscular and cardiovascular systems. The nervous system information forms a basis for the material presented in the third term course, BHSC 312, Neuroanatomy and Physiology.

BHSC 312 Neuroanatomy and Physiology — Provides a basic understanding of anatomy, physiology and pathophysiology of immediate relevance to the current practices of electrophysiology. Emphasis is placed on the structure and function of the nervous system and selected pathophysiological states.

BHSC 339 Human Behavior — Basic considerations of behavioral science relevant to Electrophysiology Technologists' concerns will be explored. Theory and research findings dealing with stress and illness behavior will be presented. Professional and ethical considerations and ways of dealing with common hospital events will be explored. Emphasis will be on human relations skills in dealing with patients and staff.

CHEM 107 Chemistry for Biomedical Electronics — Covers basic general chemistry. The course includes stoichiometry, nomenclature, concentrations of solutions (molarity, molality, equivalent weight, PPM, percent), acid-base chemistry (strong and weak electrolytes, buffers, hydrolysis of salts) and electrochemistry (oxidation, reduction, voltaic cells, nernst equation). The laboratory part of the course which runs parallel with the lectures consists of quantitative analysis, both gravimetric and volumetric.

CHEM 207 Introduction to Organic and Biochemistry — This course gives an introduction to organic and biochemistry. The naming, properties and main reactions of the major classes of organic compounds are discussed. The biochemistry includes both the chemistry and metabolism of fats, proteins and carbohydrates. Lab work includes techniques and synthesis in organic chemistry and biochemical techniques frequently encountered in the clinical lab, e.g.: spectrophotometry, chromatography, electrophoresis. Prerequisite: CHEM 107.

ENPY 150 Applied Instrumentation — Provides the basic electrical/electronic knowledge and skills needed by technologist-practitioners of EEG/Electrophysiology. Emphasis will be on dealing with problems encountered in the clinical environment.

ENPY 250 Electrophysiology Devices and Techniques — Introduces the student to devices and techniques used in clinical EEG and ECG laboratory practice. Correct placement and application of electrodes for these two techniques is taught so that the student is qualified to act as an assistant technologist for summer employment. A comprehensive overview of the field is presented so that students can begin to select their areas of specialization.

ENPY 350 Electrophysiology — Students will be instructed for practical competence in the performance and technical interpretation of the following clinical, electrodiagnostic procedures: visual evoked potentials, somatosensory evoked potentials, brainstem auditory evoked potentials.

ENPY 351 Introductory Clinical Experience in Electroencephalography — Scheduled on Tuesday and Thursday mornings at the Burnaby Hospital EEG Laboratory, this course will provide hands-on patient contact experience under direct supervision, in preparation for fourth term practicum experience.

ENPY 450 Clinical Experience in Electrophysiology — An appropriate amount of time is spent in each of the following

clinical areas: EEG, EMG, audiology, ophthalmology. Program will be tailored to the specific student. Clinical work may be out-of-town. Prerequisite: ENPY 350, ENPY 351.

GNNU 182 Patient Care — Introduces students to the hospital environment and the basic safety concepts of patient care. It includes observation and communication skills, body mechanics, fire safety and medical and surgical asepsis.

HCOM 104 Technical Writing for Biomedical Electronics — Emphasizes clear, correct, health-oriented technical writing for biomedical electronics technologists. Students will learn how to organize and sequence technical information, illustrate documents, describe and define technical material, write direct letters and memos, write a professional resume and application letter, and summarize reports and articles.

HCOM 203 Technical Writing for Biomedical Electronics — A continuation of HCOM 104. This term, students will write and present orally hospital-oriented and industry-oriented memo reports, and write and present a longer, formal technical report. This term focuses on professional communication. Students will learn how to use the Wang word processing system to write reports and use medical terminology correctly.

MATH 178 Basic Technical Mathematics for Biomedical Electronics — Systems of linear equations, determinants, matrices, types of systems and application to electrical networks. Polynomial curve fitting, loop analysis, and T to Y transformations. Common and natural logarithms, logarithmic/semilogarithmic graphs, decibels, and exponential growth and decay. Trigonometric functions, solution of triangles and graphing and addition of sinusoidal functions. Complex numbers, rectangular/polar transformations, phasor representation of sinusoidal waveforms and AC circuits.

MATH 278 Calculus for Biomedical Electronics — Limits, the derivative, differentiation rules, applied maxima/minima, curve sketching, and differentials with applications to electrical technology. Antidifferentiation, the indefinite integral and the definite integral including area, mean value and RMS value. Differentiation and integration of trigonometric, logarithmic and exponential functions. Fourier series. First and second order differential equations applied to electrical circuits. Basic arithmetic and functions, input/output, branching, strings, arrays and files. Arithmetic in other bases, logic gates and corresponding Boolean algebra, truth tables, Karnaugh maps, logic circuit design and binary addition/subtraction.

MATH 378 Statistics for Biomedical Electronics — Provides students with basic knowledge of statistics. Topics include random sampling, measurement and rounding, frequency distributions, measures of central tendency, measures of dispersion, normal distribution, ranks and percentiles. Estimation, central limit theorem, standard errors, confidence intervals, hypothesis testing, null and alternate hypothesis, large sample hypothesis testing, t-distribution, small sample hypothesis testing and non-parametric testing will also be covered. Computer packages will be discussed.

PHYS 324 Biophysics — This is a general level course in basic physics with emphasis on applications to biological systems. The topics covered are mechanics, heat, sound and light, with related applications. Various biological systems are studied with reference to the physical principles involved in both their development and function.

Environmental Health

Public Health Inspector Training

The public health inspector is a vital member of the community health delivery system whose role includes improving the environment through the use of education, consultation, inspection and monitoring techniques and, if necessary, by the enforcement of health legislation. This role is applied in the areas of food hygiene, insect and rodent control, communicable disease investigation, public accommodation, community care facilities, public recreational facilities, water supply and waste disposal systems, occupational health and safety and environmental pollution — air, water, soil and noise. The graduate provides leadership and technical expertise in the development of long-range planning to protect and improve community health. To meet these demands the candidate must be a mature, practical person and possess excellent communicative skills, as well as considerable tact and discretion in working with people at all levels within the community.

Job Opportunities

Employment possibilities for public health inspectors include municipal, provincial and national health agencies, environmental and pollution control agencies and private businesses and industries such as food processing, catering and fisheries. Occasional openings occur in the teaching field. Employment opportunities exist in the industrial health and hygiene area for students who also possess an undergraduate degree.

The Program

The cross-disciplinary curriculum includes general studies in health and the health engineering sciences, math and the physical and social sciences, in order to give students a thorough understanding of the many health hazards in the environment and to equip them to measure, evaluate and recommend controls for these hazards. Instructional modes include lectures, labs and field experience.

Prerequisites

Algebra 12, Physics 11 and Chemistry 12 are course requirements for this program. Applicants must be in good health. The nature of the work precludes individuals who are severely handicapped. Applicants should be able to show evidence of maturity, have a positive outlook and be interested in serving the community. Acceptance is dependent on a preselection interview.

Post-graduation

After completing the requirements of the two-year program leading to a Diploma of Technology, graduates must complete six months of field training in a recognized health unit under the direction of a Medical Health Officer and a Public Health Inspector. Successful candidates may then sit a national examination to qualify for a Certificate in Public Health Inspection (Canada) granted by the Board of Certification of the Canadian Institute of Public Health Inspectors.

Course Descriptions

BHSC 123 Public Health and Pollution Control Microbiology

— An introduction to those areas of microbiology which the public health inspector will use in daily work. The areas include the structure and physiological characteristics of bacteria, viruses and fungi, and their significance to food, water, sewage and waste disposal.

BHSC 204 Basic Anatomy and Physiology — Designed to provide a basic knowledge of human anatomy and physiology. Emphasis is placed on the physiology of human body systems and how environmental factors affect these systems.

BHSC 223 Public Health and Pollution Control Microbiology — see BHSC 123. Prerequisite: BHSC 123.

BHSC 424 Communicable Disease Control — Provides the student with a sound knowledge of the natural history, spread and control of communicable diseases. Emphasis is placed on modes of transmission and control of diseases of provincial and national importance.

CHEM 108 Chemistry for Environmental Health 1 — A general chemistry course for environmental health. Topics include chemical symbols, formula acid base reactions, calculation based on formulae and chemical equations. Theory of volumetric analysis molarity, normality calculations based on concentration of solutions. Acid base equilibria solution, PH and POH, buffers and hydrolysis.

CHEM 208 Chemistry for Environmental Health 2 — An introduction to organic biochemistry, and a selection of topics of interest to Environmental Health. Organic covers functional group analysis, naming by IUPAC, common name and trade names of many commercial chemicals, oil refining, photochemical smog; pesticides. Biochemistry covers lipids, carbohydrates and proteins. Other topics include alkalinity, hardness, water softening, surfactants, heavy metal poisoning, chemical toxicity, biological oxygen demand, chemical oxygen demand and swimming pool chemistry. Prerequisite: CHEM 108.

CHEM 313 Instrumental Analytical Methods for Environmental Health — Principles and laboratory procedures of the more common instrumental methods of chemical analysis: spectroscopic methods including visible, ultraviolet and infrared spectroscopy. Atomic absorption spectroscopy, flame photometry, potentiometry, polarography and chromatography. Prerequisite: CHEM 208.

CHEM 418 Industrial Chemical Processes — Designed to give the student an overview of the chemical processes used in industry, chemicals, chemical reactions, products manufactured, waste products, pollutants produced and the hazards to personnel. Students will make field trips to selected industries. Prerequisite: CHEM 108.

CHSC 413 Environmental Analytical Methods — Surveys suitable methods of examining many types of water, waste water and materials related to control of water quality. Typical industrial pollution problems related to local industry are discussed during the lab periods and special attention is given to proper sampling techniques. A selection is made from the following analysis of field samples; cyanide, pesticides, arsenic, mercury, nitrogen (ammonia, nitrate, organic), oxygen (D.O., B.O.D., C.O.D.), surfactants, phosphates, sulphates, chlorides, proteins, carbohydrates, lignin, phenols and heavy metals. Two field trips are included.

ENVH 124 Pest Control — With primary emphasis on insects and rodents, this course will examine the identification, life cycles and habits of pests in order to understand the various measures for their control.

ENVH 141 Food Hygiene 1 — The food hygiene courses will examine the public health concerns associated with the food industry. Specific attention will be directed to legislative control and enforcement, inspection techniques, causes and investigation of food-borne illnesses, microbiological concerns and educational programs, as all of these are applied to the food industry in production, processing, handling, storage, service display, construction and materials.

ENVH 142 Public Health Inspection 1 — Provides the student with knowledge of duties and responsibilities in government organizations. A detailed review of related environmental and health legislation will be covered, as well as the division of control and authority at the federal, provincial and local levels. Control techniques and methodology used by government organizations is stressed.

ENVH 143 Environmental Health and Engineering 1 — Covers a number of topics relevant to the field of environmental health including solid waste collection and disposal, emergency measures, camp and recreational sanitation, housing, community planning and swimming pools.

ENVH 231 Food Hygiene 2 — See ENVH 141.

ENVH 232 Public Health Inspection — See ENVH 142.

ENVH 266 Epidemiology and Biostatistics — This course enables the student to apply epidemiological principles to assess the distribution and causes of disease in the population, and to use biostatistical methods to critically evaluate data and study conclusions.

ENVH 275 Drinking Water and Waste Disposal — An introductory course which examines the means, methods, design and construction of facilities required to provide adequate potable water and sewage disposal. Associated health hazards, protective measures, and how to solve problems encountered in individual systems, will be considered. Further topics will include the characteristics of, and disposal methods for, agricultural wastes.

ENVH 331 Food Hygiene 3 — See ENVH 141.

ENVH 332 Public Health Inspection 3 — See ENVH 142.

ENVH 337 Public Health Administration 1 — This is a survey course which examines the principles of organizational behavior, organization and design. The theoretical aspects of public health administration will be examined, showing the administrative philosophies from the classical school of administration to present-day philosophy. These administrative concepts will be dealt with as they apply to the functioning of government agencies and health departments. Particular reference will be made to Canadian government organization.

ENVH 350 Environmental Noise — Covers noise topics relevant to the field of environmental health with emphasis on occupational and community noise assessment and control. The lab course will emphasize audiometry, noise measurement and analysis, and calibration techniques utilizing state-of-the-art instrumentation. Prerequisite: MATH 182 or PHYS 212.

ENVH 358 Environmental Health Relations — Examines the interrelationships and interactions between various government departments, agencies and corporations. Additionally, the forces which underlie the social behavior of groups, large organizations and communities will be examined. Interpersonal relations will be exemplified through the practical application of public health education and the interaction of personnel in the environmental health field. Principles of public relations will also be examined with emphasis on problems peculiar to public health.

ENVH 379 Technical Research Methods 1 — Provides for the development of research methods and communication skills necessary to design technical research reports. Special emphasis will be placed on predicting trends in the field of public health. This course is designed to encourage the student to be self-assertive and creative. Prerequisite: ENVH 266.

ENVH 437 Public Health Administration 2 — See ENVH 337.

ENVH 453 Environmental Health and Engineering 2 — See ENVH 143.

ENVH 456 Public Health Law — An examination of the legal system which serves our society, followed by a detailed look at certain areas of substantive law which public health officials are likely to come in contact with while carrying out their duties. Special attention will be given to that body of legislation designed for the protection and promotion of individual and community health. Court procedure and evidence giving are examined in depth.

ENVH 459 Technical Research Methods 2 — See ENVH 379. Prerequisite: ENVH 202.

ENVH 470 Industrial Hygiene and Toxicology — A survey course in occupational health. Given lectures, laboratory exercises and field situations, the student will be able to recognize common occupational health hazards, demonstrate how to use appropriate environmental sampling equipment and recommend control measures which may alleviate potential health hazards.

ENVH 471 Food Hygiene 4 — See ENVH 141.

HCOM 106 Communication for Environmental Health — This applied course introduces students to the communication needs of professionals working in the environmental health field. It includes organizing information, writing public relations letters, procedures and literature reviews. Students also deliver a short oral training session on an environmental or occupational health and safety topic.

HCOM 205 Communication for Environmental Health — Builds on skills taught in HCOM 106 and adds incident, inspection and investigation reports, proposals and a professional job application package. Meetings and interviewing skills are also covered. Students will propose, design and sell a training module for an environmental health topic.

MATH 182 Basic Technical Mathematics for Environmental Health — Systems of measurement and mensuration. Linear and quadratic equations and systems of linear equations. Functions and their graphs including power functions. Exponential/logarithmic theory, common and natural logarithms, log-

arithmic/semilogarithmic graphs and exponential growth and decay.

PHYS 212 Environmental Physics — An introduction to the physical principles, properties and relationships of physical quantities and how they affect each other. Motion, force, energy, power, properties of matter, thermal energy, electricity, wave motion, sound, light and radiation, as they apply to environmental topics. The lab program emphasizes measurements, data analysis and experimental techniques while confirming and expanding the lecture concepts.

Health Information Technology

Health Information Technology offers interested students the advantage of two program options — a one year health record technician option and a two year health record administrator option. The two options have essentially an equivalent first year curriculum and are designed to meet the requirements of prospective employers. Both options are open to female and male candidates. Applicants are required to discuss the nature of the work with health record administrators or technicians currently working in the field.

Health record professionals make a valuable contribution to the health care system. They provide a very special service to the administrative and treatment teams in a health facility, a service that provides the information necessary to manage the facility to its best advantage while giving patients the best possible care. The major source of health information is the health or medical record which summarizes the information about the patient's care.

Health records are maintained in all health care facilities and provide a permanent, confidential report of each patient's encounter with the health care delivery system. The health record is a complete, timely, accurate document of medical and allied health professional observations concerning health, illness or injury, and is an important tool in maintaining and evaluating the quality of care. As the necessity for accurate documentation in health care grows, computerization is becoming an important consideration in the recording and utilizing of health information, including record linkage.

The Health Information Technology program is fully recognized by the Canadian College of Health Record Administrators (CCHRA). Successful completion of the national examination qualifies the graduate to work anywhere in Canada.

Health Record Administrator Option

This is a **two year** program designed to train students for management and administration in the health record department of hospitals and health agencies. Each graduate receives a Diploma of Technology from BCIT and is eligible for recognition by the Canadian College of Health Record Administrators at the Certificant Level (CCHRA[C]).

Health record departments of hospitals and health agencies require the specialized services of health record administrators to develop, manage and utilize health information systems.

Job Opportunities

The health record administrator may be employed in the hospital health record department, as the director of the department or in a staff position. In addition to traditional employment in hospitals, other facilities such as community health centres, government agencies and industry may also employ health record administrators to develop, implement and maintain health information systems.

Health record administration is an expanding field. With initiative, today's health record administrator may enter any area in which knowledge of health record standards and systems is

necessary. As the use of computers in health care expands, health record administrators are increasingly involved in the design, analysis and use of computerized information systems.

The Program

In collaboration with the Health Record Association of British Columbia and health care agencies, BCIT has designed the Health Record Administrator option to provide two years of instruction in the form of lectures, lab exercises and practical experience. In the first year, students concentrate on the basic health sciences and acquire a fundamental knowledge of health record science. Two weeks of introductory practical experience in hospital health record departments will be provided during term two. In the second year, health record administration, management, labor relations, organizational theory, quality assurance and computer applications will be stressed. During the last term of the program, a ten week practicum in health record departments of B.C. hospitals and various health agencies will take place. Students incur the costs of travel and living expenses during practicum sessions and may be placed throughout the province for the practicum.

Students are expected to become members of the HRABC while attending the program. To be recognized by the CCHRA, graduates will successfully write the national examination thus becoming Certificant members of the CCHRA.

Graduates possess the skills required to meet current and future demands for health record professionals trained in information and resource management applicable to the health care industry.

Prerequisites

Algebra 12, Biology 12, and proficiency in typing (approximately 50 wpm), are course requirements for this program. Maturity, responsibility and an interest in health care and information management are essential. Experience in business or in a related health field is an asset. The work demands attention to detail and accuracy; of utmost importance are leadership ability, initiative and effective interpersonal skills.

Applicants are required to have a successful personal interview with HIT faculty following a visit to a health record department in an acute care general hospital.

Health Record Technician Option

The health record technician is a highly-skilled member of the health care team. Through the Health Information Technology, BCIT has designed a one-year program of study for individuals interested in pursuing this career option.

This program is designed to train students in the technical aspects of health record science. Each graduate receives a Certificate of Technology from BCIT and is eligible for recognition by the Canadian College of Health Record Administrators at the Associate level (CCHRA[A]).

Job Opportunities

The program is designed to prepare graduates for small hospitals where they may assume major responsibilities in the health record department, and for larger hospitals where they work under the supervision of a health record administrator. Other hospital departments and health facilities (such as the Cancer Control Agency of B.C. or Greater Vancouver Mental Health Services) provide additional employment opportunities.

In a small health care facility, the health record technician may be fully responsible for the operation of the health record department; i.e. the initiation, development, operation and maintenance of health information systems. In a larger institution, the health record technician may specialize in one particular area of work. This includes technically evaluating health records according to established standards; compiling various health and administrative statistics; coding and abstracting data from health records; maintaining and using a variety of indices, storage and data retrieval systems.

The Program

Lectures, lab exercises and practical experience are combined in the training of health record technicians. Basic health sciences and the fundamentals of health record science are taught in depth. Two weeks of introductory practical experience in hospital health record departments will be provided during term two. Also during term two, the student will be introduced to quality assurance, data processing, and department management and supervision. The program concludes with a more advanced five week practicum during which technical experience is provided by health record departments in hospitals. Students incur costs of travel and living expenses for practicum sessions and may be placed throughout the province for the practicum.

Students are expected to become members of the HRABC while attending BCIT. To be recognized by the CCHRA, graduates will successfully write the national examination, thus becoming Associate members of the CCHRA.

Graduates who wish to become health record administrators may apply to BCIT for the second year of the Health Record Administrator Option on a full-time or part-time basis.

Prerequisites

Graduation from the Selected or Combined Studies Program plus Algebra 12, Biology 12 and proficiency in typing (approximately 50 wpm). Maturity, responsibility, and an interest in health care and information handling, are essential for a successful career as a health record technician. The work involved demands attention to detail, accuracy and reliability.

Applicants are required to have a successful personal interview with HIT faculty following a visit to a health record department in an acute care general hospital.

Course Descriptions

BHSC 103 Human Anatomy and Physiology — Provides students with an understanding of normal body structure and function. The course relates this knowledge to various aspects of the work performed by health record technicians and administrators such as coding and abstracting data collection for evaluation of patient care, and specification of documentation requirements in the health record.

BHSC 203 Human Anatomy and Physiology — See BHSC 103. Prerequisite: BHSC 103.

BHSC 337 Organizational Psychology — Prepares students to work in health records departments in health care institutions at a supervisory level. Organizational behavior theory and research findings will be presented and applied to situations encountered in health care organizations. Role playing and other involvement exercises will be used to apply the theory. Students will be encouraged to present their work-related experiences to enhance the course content.

BHSC 437 Organizational Psychology — See BHSC 337. Prerequisite: BHSC 337.

COMP 111 Introduction to Data Processing — Lectures and practical exercises are used to present topics such as: computer operations; input, output and storage devices; input and reporting methods; report design; data accuracy and error correcting; file processing; systems design concepts; flowcharting; programming using the BASIC language.

COMP 211 Computer Applications — Covers computer applications in engineering and medical technologies; how a computer works, recognizing problems suitable for computer solution, flowcharting and communicating with computer personnel. Emphasis is on the use of computers to solve problems related to the technology concerned. Where available, 'package' programs will be demonstrated and used by students. FORTRAN or BASIC programming language is taught, depending on the technology. Prerequisite: COMP 111

COMP 311 Computer Applications — The objectives and components of health information systems are examined from various perspectives: types of systems, reasons for computerizing health information and the role of the health record administrator in the needs assessment, analysis, design and management of health information systems. The evaluation and selection of hardware and software are also discussed. Prerequisite: COMP 211.

HCOM 105 Communication for Health Information Technologists — Introduces health information students to professional communication. The course emphasizes clear, concise and correct health-oriented writing. Students will learn how to select, organize and sequence information, how to write instructions and procedures, how to write direct memos and letters, and how to present information orally. They will also learn how to use the Wang word processing system to plan, write and revise documents.

HCOM 204 Communication for Health Information Technologists — A continuation of HCOM 105. This term, students will learn how to write persuasively, prepare an effective resume and application letter, write effective information and analytical reports, conduct effective meetings, plan and implement an effective inservice education program and how to access and report on information in the professional literature.

HITA 100 Health Record Science — This course provides students with knowledge and practice in the fundamental principles and procedures of health record science. After an orientation to the program and the profession, areas studied in the first term include a detailed examination of all aspects of the health record from formation to completion; microfilming, record retention; hospital accreditation; interdisciplinary relations and intrahospital organization; confidentiality and release of health information. The second term incorporates a more detailed analysis of the profession, legal aspects of health records, the Canadian health care delivery system, managing a small medical library, and an introduction to management and supervision of a health record department.

HITA 101 Medical Terminology — An introduction to the language of medicine. Basic rules of medical terminology, medical abbreviations, medical specialties and operative terms are included. There will be a detailed study of medical prefixes, roots and suffixes, with emphasis on analysis and word-building.

HITA 102 Disease Processes — An introduction to the concepts of pathophysiology. Common diseases for each body system are studied in detail relating each to medical and surgical treatments. Diseases studied will be correlated with patient records in laboratory assignments. Corequisite: HITA 101.

HITA 105 Health Record Procedures — Provides practical experience in the basic clerical and technical tasks performed in a health record department. The course also gives students an introduction to coding principles which enables them to assign complete, accurate ICD-9-CM codes to diagnostic and operative statements. The course coordinates with HITA 100 Health Record Science, and is conducted in a simulated health record department on campus.

HITA 113 Transcription — Transcription practice with medical, obstetrical, pathological and surgical reports. The course includes an introduction to the electronic typewriter with limited memory capacity, as well as an introduction to word processing. The emphasis is on accuracy of transcription and increasing competence with electronic equipment. Prerequisite: HITA 101, 102, and 105.

HITA 200 Health Record Science — See HITA 100. Prerequisite: HITA 100.

HITA 205 Health Record Practicum — A two week practicum focusing on basic clerical and technical tasks in the health record departments of B.C. hospitals. Prerequisite: HITA 100 and 105. Corequisite: HITA 206 or HITT 206.

HITA 206 Coding and Data Retrieval — Emphasizes the coding of diagnoses and procedures from medical records, case studies, etc., using ICD-9-CM and ICD-9; abstract data manually using HMRI. Both activities are to be performed with speed and a high degree of accuracy. The student will also be able to locate and present specified information from the HMRI printouts. Prerequisite: BHSC 103, HITA 101, 102, 105, MLAB 112.

HITA 212 Disease Processes — See HITA 102. Prerequisite: HITA 102.

HITA 222 Introduction to Quality Assurance— Deals with data collection, analysis and presentation. Topics include classification systems, data quality control, statistical formulae for health information, and an introduction to quality assurance concepts, principles and procedures. Prerequisite: HITA 100 and HITA 105.

HITA 300 Health Record Administration — Emphasizes the problem-solving approach to certain aspects of health record administration. Areas of advanced study include specialized hospitals (patient records, statistics and accreditation), the problem oriented record, medicolegal and ethical aspects, the health care delivery system and the health record profession. Health record policies, procedures and forms design; administrative committees; office space and environmental planning; administration of the Admitting and Outpatient Departments are also studied. Prerequisite: HITA 200.

HITA 303 Health Record Technological Developments — Examines the technological advances found in health record departments today. Some of the "office of the future" areas discussed are computerized coding and abstracting, computerized CR/ADT, electronic mail and advances in word processing. Emphasis is on implementation and evaluation of these systems. Prerequisite: HITA 113 or HITT 213.

HITA 306 Coding and Data Retrieval — A continuation of HITA 206, it provides the student with weekly labs in coding and abstracting (manually and electronically) with emphasis on speed and accuracy. The student will also be able to summarize and present data in such a way as to create and stimulate interest in its use. Prerequisite: HITA 206.

HITA 322 Quality Assurance and Risk Management — Emphasizes the management and use of health information. After a review of HITA 210 (particularly quality assurance and coding principles), the student will learn about the role of the Health Record Department (HRD) in risk management and utilization management programs. Data collection and presentation will be studied and the student will be able to produce timely, effective, useful reports. Quality assurance programs will be studied in terms of development, implementation and services provided by the health record department. Students will practice data retrieval and reporting using criteria audit methodology. Prerequisite: HITA 210.

HITA 400 Health Record Administration — See HITA 300. Prerequisite: HITA 300.

HITA 405 Health Information Practicum — Practical experience in the health record departments of general and specialized hospitals and other health facilities is provided, under the supervision of the director of health record services and a faculty member. After orientation to the clerical and technical duties, emphasis is placed on providing practice and instruction in the duties commonly performed by a health record administrator. Prerequisite: Successful completion of all courses in the program.

HITA 406 Coding and Data Retrieval — See HITA 306. Prerequisite: HITA 306.

HITA 422 Quality Assurance for HRD's — The development, implementation and maintenance of a quality assurance program for the health record department will be studied in depth. The course also examines the principles and practices of research and epidemiology. Prerequisite: HITA 310.

HITA 430 Health Labor Relations — A discussion of the development of labor relations in the health care environment, with detailed study of the basic principles of union practices, the application of collective agreements, the grievance proce-

dures, and the collective bargaining process. Prerequisite: HITA 300.

HITT 205 Health Record Practicum — see HITA 205. Prerequisite: HITA 100 and 105.

HITT 206 Coding and Data Retrieval — See HITA 206.

HITT 213 Transcription — Includes details as outlined in HITA 103 with increased emphasis on productivity and experience on word processing equipment. A major project concerned with the concepts, applications and evaluation of word processing services in the health record department is included. Prerequisite: HITA 101, 102, and 105.

HITT 305 Health Record Practicum — An advanced, five-week practicum for health record technician students. The course provides concentrated, practical experience in coding and abstracting in the health record departments of provincial hospitals. Students are provided with practical experience at two different sites. Prerequisite: Successful completion of all courses in the program.

MATH 180 Basic Mathematics and Statistics for Health Information — Rates ratios, proportions, and percentages. Death rates, and measures of fertility and morbidity. Cartesian coordinate system, the straight line and its graph, and the least squares line. Exponential/logarithmic theory, common and natural logarithms and logarithmic/semilogarithmic graphs. Frequency distributions and their graphical presentation. Measures of central tendency and variation, percentiles, quartiles and skewness.

MATH 280 Statistics 2 for Health Information — Probability theory and laws. Random variables, mathematical expectation, discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Method of least squares, regression and correlation. Non-parametric statistics. Prerequisite: MATH 180.

MLAB 112 Introduction to Clinical Laboratory Procedures — An introduction to clinical lab procedures in the fields of clinical chemistry, urinalysis, hematology, histotechnology and immunohematology for the purpose of interpreting lab reports in reference to documentation on the health record, abstracting, and quality assurance studies. Course also includes microbiology.

OPMT 169 Health Records Management — Management principles are related to the health care industry in such areas as health care financing, a systems approach to health care, organizational structure, planning, organizing, directing and controlling. Quantitative approaches to the management function are stressed.

OPMT 269 Health Records Management — A continuation of the scientific principles of management as applied to work improvement and innovation in health care including problem solving, data collection and analysis, methods of work measurement and work sampling techniques, and implementation strategies. Prerequisite: OPMT 169.

Faculty and Staff

George Eisler, M.A.Sc., P.Eng., M.B.A., Associate Dean
Elaine Gibson, CCRHA(C), M.Ed., Program Head
Laurie Montgomery, BHRS, CCHRA(C)
Betty Nelson, CCHRA(C)

Occupational Health and Safety

One of the primary purposes of this program is to graduate individuals who are able to provide the knowledge and leadership necessary to develop programs in industry that will assist in conserving life, health and property. They will consult with company and labour officials on ways to improve productivity by implementing loss control programs. Graduates will also identify health and safety hazards in the work environment and advise corrective action. The occupational health and safety officer will assume a major role in the development and conduct of safety training programs for workers. Accidents will be investigated to identify their root causes, and methods found to eliminate recurrences.

To achieve these career objectives, the applicant is expected to be a mature, objective person who possesses the ability to communicate decisions and goals in a tactful and professional manner.

Job Opportunities

Career openings are found in industries and regulatory agencies where the health and safety of the workers is of concern.

The Program

The science-oriented program includes combined studies in the health, engineering and business fields. This ideal combination prepares the student to understand the potential safety and health hazards of the work environment, as well as the human relations involved in seeking beneficial solutions and methods of improving the workplace environment.

Prerequisites

Algebra 12, Chemistry 11 and Physics 11. Candidates will be interviewed.

Course Descriptions

ADMN 161 Microcomputer Software 1 — Gives students a basic understanding of the microcomputer and available software. It provides hands-on experience in using various software packages, such as word processing and spread sheets, as well as the application of software to the field of Occupational Health and Safety.

ADMN 224 Management for Occupational Health and Safety — Studies behavior and attitudes in an organizational setting. Topics include the organization's effect on personal perceptions, feelings and actions, and their effect on the organization, as well as the individual's effect on the achievement of the organization's purposes. Concepts such as leadership, communications, power, authority, change and conflict are examined. Will also give the fundamentals of personnel management including human resource planning; recruiting and selection techniques; job analysis, descriptions and evaluation; compensation administration; performance appraisal systems; training; employee safety and health. Current employment legislation is also reviewed.

ADMN 261 Software Systems — See ADMN 161.

ADMN 333 Industrial Relations — An introductory analysis of the fundamental issues and facts of labor-management relations. Special emphasis is given to collective agreement content and interpretation, bargaining and basic labor economics.

BHSC 307 Basic Anatomy and Physiology — A study of basic human anatomy and physiology and homeostatic principles. Emphasis is placed on the ways in which the body adapts to external changes, and the problems which attend extreme changes in various work environments.

BLDG 121 Drafting and Blueprint Reading — Incorporation and interpretation of applicable safety regulations in construction drawings, with respect to plant design, lighting, heating, ventilating, air conditioning, fire control, machine details and guards.

CHEM 115 Chemistry 1 — For lecture portion, see CHEM 103. A separate laboratory section is given, specifically for occupational health and safety.

CHEM 215 Chemistry 2 — Offers an applied approach to melding established chemical principles to chemical hazards, their problems and solutions. Terminology encountered in the field allied to related principles such as acid-base, oxidation-reduction, electrochemistry, stoichiometry, equilibrium, chemical bonding, simple thermodynamics, etc., are linked to potential and real chemical hazards. Laboratory exercises and field trips are designed to complement and integrate the lecture material. The 'language' of practical and theoretical applications is emphasized.

CHEM 315 Organic Chemistry — Surveys the various classes of organic compounds likely to be encountered in the workplace. Naming, structure, chemical and physical properties, hazards and handling precautions are emphasized. Practical work provides experience with organic compounds and processes. Prerequisite: CHEM 215.

CHEM 418 Industrial Chemical Processes — Designed to give the student an overview of the chemical processes used in industry, the chemicals used, chemical reactions, products manufactured, waste products, pollutants produced and the hazards to personnel. Students will make field trips to selected industries. Prerequisite: CHEM 108.

CHSC 288 Engineering Concepts 1 — Covers test procedures for mechanical properties; nondestructive testing and failure analysis; the basic concepts of engineering materials including metals, alloys, plastics, woods, ceramics and concrete.

CHSC 388 Engineering Concepts 2 — See CHSC 288.

HCOM 106 Communication and Technical Report Writing 1 — This applied course introduces students to the communication needs of professionals working in the environmental and occupational health and safety fields. It includes organizing information, writing public relations letters, procedures and literature reviews. Students also deliver a short oral training session on an environmental or occupational health and safety topic.

HCOM 205 Communication and Technical Report Writing 2 — Builds on skills taught in HCOM 106 and adds incident, inspection and investigation reports, proposals and a professional job application package. Meetings and interviewing skills are also covered. Students will propose, design and sell a training module for an environmental health or occupational health and safety topic.

HCOM 302 Communication for OH&S — This advanced project course is designed to complement the industry audit done in second year. Students will analyse and write safety policies and procedures, design a safety audit questionnaire, write a recommendation report (based on audit) and propose a safety program outline. They will also present their reports and a segment of their safety program orally. Students will work with industry representatives, handle correspondence, conduct interviews in industry and wordprocess their reports.

MATH 188 Basic Mathematics — Systems of measurement and mensuration. Linear and quadratic equations and systems of linear equations. Functions and their graphs including power functions. Exponential/logarithmic theory, common and natural logarithms, logarithmic/semilogarithmic graphs and exponential growth and decay.

MATH 288 Applied Mathematics 2 — Organization and graphical presentation of data, frequency distributions, measures of central tendency and variation. Probability theory and laws. Discrete and continuous theoretical distributions. Sampling, estimation and hypothesis testing with both large and small samples. Method of least squares, regression and correlation. Chi-square test.

OH&S 142 Policies in Industrial Health and Safety — Deals with legislation relevant to the safety field, claims management, safety policies, the concept of workers' compensation, the structure of the Workers' Compensation Board, appeals procedures, the right to know, the right to refuse and the right to participate.

OH&S 161 Principles of Accident Prevention 1 — Covers the history of the safety movement, a management approach to accident prevention, the root causes and real costs of accidents, accident investigation, inspections, job safety analysis, maintaining interest in safety, special problem solutions, motivation, the problem employee, and off-the-job safety.

OH&S 227 Security Systems — A basic security program, including threat assessment, physical and electronic barriers, key control, security lighting procedures. Data security, robbery, shoplifting and guard services.

OH&S 271 Principles of Accident Prevention 2 — Covers accident prevention for industrial operations. The engineering and technology involved in the various operations is examined. Topics include industrial buildings and plant layouts; construction and maintenance; manual handling and material storage; hoisting apparatus and conveyors, ropes, chains and slings; powered industrial trucks; elevators; principles of guarding; woodworking and metal working machinery; cold forming of metals; hot working of metals; welding and cutting; heating and ventilation.

OH&S 343 Industrial Hygiene 1: Noise and Vibration — Reviews relevant topics in acoustics, audiometry, noise dosimetry and noise control within buildings. The student will be introduced to basic methods of sound measurement and the assessment of hearing loss. At the end of this course, the student will be able to estimate noise in the work environment and recommend simple sound control measures associated with the use of enclosures, damping and absorbent materials. Prerequisite: Year 1 of the Occupational Health and Safety program, or permission of the instructor, MATH 188 or PHYS 114.

OH&S 364 Fire Protection — Deals with the concept of Fire Prevention. Topics include: the handling and storage of flammable and combustible liquids, chemical hazards, dust explosions, bleve, electrical hazards, construction features, chemistry of fire, fire detection, portable extinguishers, automatic sprinkler systems and inspection procedures.

OH&S 436 Occupational Diseases — Provides the student with an overview of occupational diseases in terms of their causes and prevalence, methods of spread and their prevention. There is discussion of the responsibility of the worker, and various professionals as well as the worker, in the management of occupational diseases of the lungs which are commonly experienced by workers in B.C. There is discussion on a wide range of problems from contaminated water, food supplies, to scabies and causes of silicosis and "white fingers" disease.

OH&S 458 Safety Program Evaluation — A study of the safety audit. Students will conduct a complete safety program evaluation of an industrial firm and produce a report complete with recommendations and a plan for implementation of improvements.

OH&S 459 Loss Management — A study of the principles of loss management, measurement of safety program effectiveness, risk management, basic insurance principles, transportation of dangerous goods, emergency planning and WHIMIS legislation.

OH&S 465 Electrical Safety — An introductory course in electrical power and machinery with emphasis on safety aspects. Topics include electrical technology, insulators, conductors, magnetism, capacitors, transformers, Canadian Electrical Code, motors, generators, high voltage, hazardous locations, overload, electrical injuries, grounding, lock-out procedures and limits of approach. Prerequisite: MATH 283.

OH&S 473 Industrial Hygiene 2: Toxicology — This basic course allows the student to identify, monitor, evaluate and recommend control measures for common chemical and physical hazards in the workplace. The first part of the course reviews the concepts of toxicity and hazard as they apply to the development of permissible levels. The toxicity of common gases, vapours, dusts and fumes is reviewed. The second part of the course discusses the hazards associated with excessive exposure to ionizing and non-ionizing radiation, temperature and pressure extremes.

OPMT 181 Ergonomics — Ergonomics concentrates on human factors in the scientific study of people at work, especially regarding worker safety, health, efficiency and comfort. The course explores recent trends in the ergonomics field in relation to the physical working environment, adaptation of tools and workplace to the worker, equipment design, impact on productivity and viewpoints of both workers and management.

PHYS 118 Physics for OH&S 1 — Covers statics, dynamics, momentum, force, friction, energy, power, angular momentum, simple machines, properties of solids, fluids, fluid mechanics, thermal properties of matter, thermal energy, basic electricity and magnetism, optics and atomic and nuclear phenomena.

PHYS 218 Physics for OH&S 2 — See PHYS 118.

George Eisler, M.A.Sc., P.Eng., M.B.A., Associate Dean

Lars G. Larsson, C.R.S.P., Program Head

Prosthetics and Orthotics Technology

Prosthetists and orthotists help people who have become disabled or who were born with physical defects by fitting them with artificial limbs or supports. The prosthetist designs, constructs and fits artificial limbs, while the orthotist designs, constructs and fits orthopaedic braces and supports. Both work closely with doctors, physiotherapists and others in rehabilitation medicine. After assessing the needs of a patient, the prosthetist or orthotist may assemble the components of an artificial limb or support, or may develop specifications for its construction by a technician. The device is then fitted and adjusted to the patient. From time to time, repairs and maintenance work must also be done.

Job Opportunities

Prosthetists and orthotists work in rehabilitation hospitals and ambulatory care services, in special treatment facilities such as arthritis centres, and in private practice. Starting salaries are about \$20,000 per year, rising to about \$30,000 after certification.

The Program

The two year course of studies combines lectures, labs and practical experience in local health agencies. The curriculum equips graduates to recognize patient problems, assess individual needs, design and construct appliances, select appropriate materials and deal with the emotional difficulties of patients.

The Prosthetics and Orthotics Program is jointly funded by three western Canadian provinces: B.C., Alberta and Saskatchewan. Applications are accepted every second year on a pro-rated basis from each of the three provinces.

The next intake of students is set for September, 1988.

Post-graduation

After three year's work experience under the guidance of a certified orthotist or prosthetist, graduates may write the national certification examination of the Canadian Board of Certification for Prosthetists and Orthotists.

Prerequisites

Algebra 12 and Physics 11 are course requirements for this program. Metalwork and woodwork courses are recommended. Applicants should have a good academic background, manual dexterity, mechanical aptitude and good interpersonal skills. Patience and inventiveness are of considerable importance.

Expenses

In addition to tuition fees, students need approximately \$600 for textbooks and supplies for the two year program. Students are also responsible for costs of travel to and from agencies where practicums are held, and should be prepared to purchase certain small hand tools.

PROGRAM: Prosthetics and Orthotics

Level 1	Credit
BHSC 110 Anatomy and Physiology Systems	4.0
HCOM 111 Technical Writing for Prosthetics and Orthotics	3.0
MATH 184 Basic Technical Mathematics for Prosthetics and Orthotics	4.0
P/OT 100 Prosthetics and Orthotics 1	15.0
PHYS 121 Physics for Prosthetics and Orthotics	4.0
Level 2	
BHSC 210 Anatomy and Physiology Systems	4.0
BHSC 211 Regional Anatomy 1	3.0

P/OT 400 Prosthetics and Orthotics 4	25.0
P/OT 401 Business Practices	3.0
P/OT 402 Practicum	10.0
P/OT 410 Patient Assessment and Care	3.0

Course Descriptions

BHSC 110 Anatomy and Physiology Systems — This course, together with BHSC 210, follows a systems approach to the study of the structure and function of the human body. The course deals with the physiology of the musculo-skeletal and nervous systems. Also included are the basic cytological and embryological principles relevant to these systems.

BHSC 210 Anatomy and Physiology Systems — A continuation of BHSC 110. Of primary concern is the study of the organization and function of the nervous system with particular reference to motor control and the basic anatomy and physiology of the circulatory, respiratory, digestive, urinary, endocrine and reproductive systems. Prerequisite: BHSC 110.

BHSC 211 Regional Anatomy 1 — This is a laboratory course which together with BHSC 311 follows a regional approach to the study of human anatomy. The major emphasis in this course is on the study of the muscles and skeletal structure of the lower limb. Prerequisite: BHSC 110.

BHSC 242 Behavioral Science — In a series of lectures, discussions and planned experiences, students are given a greater understanding of how various people react to physical loss or illness, and of the role to be played in assisting the handicapped to reintegrate into society. Topics include the psychology of being ill, understanding stress behavior, pain management, interpersonal communication, adjustment in self-image, the disabled person in society and relationships among health care professionals.

BHSC 310 Pathology and Pathophysiology — Students explore basic concepts of the disease process, and the nature of the various disorders they are most likely to see in their prosthetic/orthotic practices. Topics such as cellular injury and death, trauma, inflammation and healing are covered. Specific disorders include bone, joint and muscle pathologies, neurological and hemodynamic disorders, metabolic and congenital abnormalities and neoplasia.

BHSC 311 Anatomy and Physiology Regional — This course is a continuation of BHSC 211 and follows a regional approach to the study of human anatomy. Emphasis is placed on the muscles and skeletal structures of the upper limb and trunk.

BHSC 410 Applied Pathology — Specific diseases frequently encountered by the Orthotist or Prosthetist are investigated in detail. Prerequisite: BHSC 310.

BMET 382 Electrical Circuits — Students become familiar with AC and DC circuits as well as other electrical building blocks. This theory will be used to explain the operation of electrically powered prostheses.

BMET 482 Applied Electrical Fundamentals — This course is a continuation of BMET 382. Materials covered include review of magnetism, inductance, motors, transformers, capacitance, electrical safety and principles of the myoelectric prosthesis.

CHSC 284 Materials Workshop — Provides basic coverage of the structures, properties and applications of common engineering materials with emphasis on those used in prosthetic and orthotic devices. Concepts such as tensile and yield strength, fatigue, hardness and deformation will be explored both in theory and in the testing laboratory. The aim is to provide an appreciation of the materials which are or may be used in prosthetic/orthotic devices, and to explain at least some of the factors involved in selecting a material for a specific purpose.

GNNU 183 Patient Care — Students are instructed in the basic safety and comfort needs of patients requiring their services. The course treats such topics as proper procedures for lifting or transferring patients, medical and surgical asepsis, and appropriate interventions in emergency situations.

HCOM 111 Technical Writing for Prosthetics and Orthotics — Through a series of lectures and projects, students improve their ability to express themselves clearly and appropriately to patients and their families, health care professional groups such as government and fee-paying agencies. Topics include basic skills in writing instructions, memorandums, letters and reports, and effective public speaking. Library orientation and research techniques are also emphasized.

HCOM 206 Technical Writing for Prosthetics and Orthotics — A continuation of HCOM 111. Students write routine and persuasive reports and proposals. An oral presentation is also included. The emphasis is on communication applications in the prosthetics and orthotics field.

MATH 184 Basic Mathematics for Prosthetics and Orthotics — Functions and their graphs. Systems of linear equations, determinants and matrices. Trigonometric functions of any angle, solution of triangles, radian measure and graphs of trigonometric functions. Complex numbers and their graphical representation and application.

MATH 284 Basic Technical Mathematics for Prosthetics and Orthotics — Exponential/logarithmic theory, common and natural logarithms, logarithmic/semilogarithmic graphs, exponential growth and decay. Organization and graphical presentation of data, frequency tables, histograms, ogives, measures of central tendency and variation. Statistical inference.

P/OT 100 Prosthetics and Orthotics 1 — Initially, students are oriented to the terminology, general concepts and devices commonly prescribed in the field. The area of Lower Limb Orthotics is then treated in detail, with the aim of developing competence in the materials, components and tools commonly used in the construction of lower limb orthoses.

P/OT 200 Prosthetics and Orthotics 2 — The area of Lower Limb Prosthetics is examined in detail. Design principles underlying the patellar-tendon-bearing prosthesis and its variants are analyzed. Students design, construct, fit and align a variety of prostheses for trans-tibial and Syme's amputees. While casting techniques, fitting procedures and alignment principles are emphasized, attention is also given to proper use of materials, acceptable workmanship and cosmetic finishing. Prerequisite: P/OT 100.

P/OT 202 Practicum — Students are given the opportunity to apply their knowledge of design principles and fitting procedures to a variety of patients, under the supervision of a practicing prosthetic or orthotic clinician. Participation in clinical activity and discussion of unusual fitting problems are encouraged. Specific projects aimed at amplifying work done in the Prosthetic and Orthotic courses are required. Prerequisite: P/OT 200, P/OT 220, BHSC 210, BHSC 211.

P/OT 220 Biomechanics — Normal human locomotion is studied in some detail. Force tolerance and mobility of the skeletal system are examined in detail to determine the functional loss associated with various physical disorders or amputations, and the residual function upon which a lower limb prosthesis or orthosis can be based. Prerequisite: PHYS 121.

P/OT 301 Prosthetics and Orthotics 3 — Lower Limb Prosthetics is completed with the treatment of Trans-Femoral and Total Leg Prostheses. Prerequisite: P/OT 202.

P/OT 320 Biomechanics — Force tolerance and mobility of the skeletal system are examined in detail to determine the functional loss associated with various physical disorders or amputations and the residual function upon which a prosthesis or orthosis can be based. The effect of pressure on soft tissue is also explored. Various spinal and upper limb devices are analyzed from the viewpoint of the mechanical forces at work and their effect on the disabled person. Prerequisite: P/OT 202.

P/OT 400 Prosthetics and Orthotics 4 — The area of Spinal Orthotics is covered from the principles involved in fitting a corset to the construction of CTLSO, Milwaukee type. Biomechanical principles and fitting guidelines will be emphasized more than construction techniques. The area of Upper Limb Prosthetics and Orthotics is then treated with each student constructing and fitting a variety of devices, including Myoelectric Prostheses. Prerequisite: P/OT 302.

P/OT 401 Business Practices — Students receive a basic understanding of the planning, organization, directing and controlling functions of business management. Topics such as human relations, management of time, budgeting and accounting, record keeping and labor relations will be covered, with examples drawn from actual prosthetic/orthotic facilities. The ethical and legal concerns of a health care professional will also be presented.

P/OT 402 Practicum — See P/OT 202. Prerequisite: P/OT 400, P/OT 401, P/OT 410.

P/OT 410 Patient Assessment and Care A series of presentations and projects help students learn how to evaluate patients from the viewpoint of functional loss, select appropriate devices to restore function, and design solutions to specific needs not met by available componentry. Basic principles and procedures for handling the disabled are also covered.

PHYS 121 Physics for Prosthetics and Orthotics Technology — This general level physics course emphasizes physics applications in prosthetics and orthotics. The course covers mechanics, and includes topics in kinematics, dynamics, statics, simple machines, energy and fluid mechanics. Measurement and problem solving techniques are stressed. The mathematical treatments require algebra and trigonometry.

Wm. J. McGuinness, M.A., C.P.O., Program Head

Sylvia Raschke, C.O., Assistant Instructor

MEDICAL IMAGING

Diagnostic Medical Sonography
Medical Radiography
Nuclear Medicine

Diagnostic Medical Sonography

Post-diploma Program

Diagnostic ultrasound is a rapidly emerging, relatively new medical diagnostic technique. Using high frequency sound waves transmitted and reflected through various body parts, it is possible to image organs, masses and fluid collections within the body. The technique provides valuable diagnostic information. Unlike x-rays, ultrasound waves are non-ionizing. Diagnostic ultrasound energy is non-invasive and non-traumatic. To date, no significant biological effects have been demonstrated.

The field of Diagnostic Medical Sonography is dedicated to the preservation of life and health by diagnosis and prevention of disease. The diagnostic medical sonographer (ultrasound technologist) is a skilled person, qualified by academic and clinical training to provide patient services using diagnostic ultrasound. Sonographers work under the supervision of a doctor of medicine, qualified in the use and interpretation of ultrasound procedures. Studies performed by the sonographer include: echocardiography, abdominal sonography, obstetrical/gynecological sonography, ophthalmic sonography, and neonatal brain sonography.

Job Opportunities

Graduates in this dynamic new allied health field will assume an important role in maintaining high quality patient care, provide leadership in the development of health programs, and participate in medical research. Employment opportunities exist in hospital ultrasound facilities, or integral sections of other hospital departments, such as radiology, cardiology or obstetrics. A large percentage of hospitals in B.C. have diagnostic ultrasound equipment, and its use is expanding rapidly.

The Program

Due to the entrance requirement of knowledge in allied health, the program is only one year in length. The first term is primarily devoted to the study of the theory of diagnostic ultrasound. The clinical aspects comprise the larger portion of the second term. Clinical training is provided in selected hospitals in B.C. The course of studies includes anatomy and physiology, pathophysiology, physics of ultrasound, instrumentation and applied sonography.

Upon successful completion of the program, the graduate is eligible to write the American Registry of Diagnostic Medical Sonographers examinations.

Prerequisites

Diploma of Technology is an allied health field such as Radiog-

raphy, Nuclear Medicine, or Registered Nursing, or a Bachelor of Science in an appropriate health related field.

Selection Criteria

Acceptance into the program will be based on: post-secondary education transcripts, educational and professional achievements, clinical experience, an autobiographical letter outlining the reasons for your interest in Diagnostic Ultrasound as a career, and a letter of reference from a physician and/or a post secondary academic faculty member with whom you have worked. Based upon the documentation submitted, the most suitable applicants will be invited to an interview.

PROGRAM: Diagnostic Medical Sonography

Level 5	Credit
BHSC 108 Anatomy and Physiology	3.0
BHSC 109 Pathophysiology	3.0
DSO 101 Applied Sonography	7.0
DSO 105 Clinical Experience	12.5
PHYS 523 Physics of Ultrasound	4.5
Level 6	
DSO 206 Clinical Experience in Echocardiography	20.0
DSO 306 Clinical Experience in Abdominal Sonography	20.0
DSO 307 Clinical Experience in Obstetrical and Gynecological Sonography	20.0

- All courses have a 60% pass level.

Course Descriptions

BHSC 108 Anatomy and Physiology — Provides an overview of the organ systems of particular clinical interest to sonographers. Special emphasis is placed on the genito-urinary, digestive (including liver, gall bladder and pancreas) and cardiovascular systems. In addition, longitudinal foetal development is discussed and cross-sectional anatomy of the abdominopelvic cavity is examined.

BHSC 109 Pathophysiology — An outline of the etiology and pathogenesis of those diseases commonly investigated by ultrasonography. The course is divided into three equal sections: obstetric gynecologic pathology, abdominopelvic organ pathology and cardiography. General principles of the disease process and complex syndromes will also be discussed.

DSO 101 Applied Sonography — Encompasses an in-depth study of techniques required for competency in echocardiography, abdominal sonography and obstetrical and gynecological sonography. Image production and the recognition of normal and abnormal patterns are stressed, as well as examination protocols for all major areas of interest.

DSO 105 Clinical Experience — Time is spent in hospital ultrasound departments to obtain clinical and practical experience in support of classroom studies.

DSO 206 Clinical Experience in Echocardiography — The student will acquire the skills to carry out sonographic examinations and the ability to recognize normal and abnormal sonographic patterns in the heart.

DSO 306 Clinical Experience in Abdominal Sonography — The student will acquire the skills to carry out sonographic examinations and the ability to recognize normal and abnormal sonographic patterns in the abdomen.

DSO 307 Clinical Experience in Obstetrical and Gynecological Sonography — The student will acquire the skills to carry out sonographic examinations and the ability to recognize normal and abnormal sonographic patterns in the female pelvis.

PHYS 523 Physics of Ultrasound — Introduces students to the instrumentation used in ultrasound, and to the nature of the imaging process and the biological effects of ultrasound. Course topics include the physics of acoustic waves, transducers, ultrasonic fields, ultrasonic imaging, basic pulse echo instrumentation, real time systems, cathode ray tubes, Doppler effect, acoustic power measurement, testing and calibration, and biological effects.

Ms. K.A. McDiarmid, R.D.M.S., M.Ed.

Medical Radiography Technology

The medical radiographer is a technologist who works as part of a health team composed of radiologists, internists, surgeons, nurses, laboratory technologists, biomedical technologists, nuclear medicine technologists, sonographers and other specialists. Radiographs are widely used as an aid in making medical diagnoses. A radiograph (x-ray) may be a routine film of the chest or a broken finger, or it may form part of the sophisticated examinations used in the detection of heart, blood vessel or brain abnormalities. Radiographers work under the direction of a medical specialist (a radiologist), and may work in the hospital radiology department, at the patient's bedside or in the operating room. Radiographers are also employed in private x-ray clinics. Medical radiography is **not a hazardous occupation**. The dangers of radiation are well recognized and rigidly controlled. The conscientious radiographer can derive much personal satisfaction as a contributor to the success of the health team and the well being of the patient. Medical Radiography is a field suited to both men and women.

During training, medical radiography students receive intensive theoretical and practical instruction in lectures, labs and tutorials at BCIT, as well as practical experience in hospitals. A final 12 months clinical training must be completed at one of the participating hospitals (five in the Lower Mainland; two in the Interior; two on Vancouver Island). This additional training is a prerequisite for writing the certification examination set by the Canadian Association of Medical Radiation Technologists. Students can expect to be sent to any of the nine hospitals for their final 12 months of clinical experience.

Job Opportunities

BCIT graduates in medical radiography find employment in hospitals and private clinics, which may employ from one to thirty-five technologists. Most x-ray technologists work a thirty-seven point five hour week with the usual statutory holidays. Night work and on-call duty may be necessary, depending on the requirements of the department. It is also possible to work outside Canada since certification by the Canadian Association of Medical Radiation Technologists is recognized in the U.K. and several other countries.

Prerequisites

Algebra 12, Physics 11, Biology 11, Physics or Biology 12 all with C+ are the minimum required subject prerequisites.

Also required are basic typing skills, an introductory computer course, volunteer work such as "candy striping" and Basic Life Support (Level C).

Applicants must have a strong sense of responsibility, an interest in the welfare of others, particularly the sick and injured, and meticulous work habits.

Students must complete an immunization program. A preadmission interview with the program head of Medical Radiography is conducted to assess the applicant's suitability for this field. Students are expected to be competent in written and oral English. The applicants suitability for the program is also assessed by hospital staff following a visit to a radiology department by the applicant.

Course of Studies

Year One (January, 1988)

Level 1	January to May (18 weeks)	Credit
BHSC 113	Anatomy and Physiology	3.0
BHSC 141	Human Behavior	1.0
GNNU 180	Patient Care	3.0

Note: All courses have a 60% pass level.

Course Descriptions

BHSC 113/213 Basic Anatomy and Physiology — A systematic study of the basics of human anatomy and physiology which prepares the student for MRAD 104/304/404, Radiographic Anatomy and Physiology. Included are basic physiological chemistry, cytology and histology.

BHSC 141/341 Human Behavior — The first half of the course deals with organizational behavior from the perspective of the technologist and his/her immediate supervisor. The second half provides the student with social and psychological concepts related to processes.

GNNU 180 Patient Care — Introduces students to the basic safety concepts of patient care. It includes observational and communication skills, body mechanics, fire safety and medical and surgical asepsis. This course also introduces the basics of the psychological and social environments of the health care organization.

GNNU 380 Patient Care — Provides the student with advanced concepts and techniques necessary to meet the comfort and safety measures of patients undergoing x-ray examinations. Emphasis is placed on patients who have complex problems such as altered consciousness, altered body sensation, various traction, drainage and suction devices, and problems that require emergency action. Prerequisite: GNNU 180.

HCOM 402 Communication for Health Technologists — Introduces students to the communication needs of health care workers — communicating with supervisors and patients. The course includes organizing and explaining information, objective and subjective descriptions, short reports, action memos, oral briefings and meetings. All assignments are based on radiography case studies.

MRAD 101 Radiographic Positioning — An introduction and orientation to the field of radiography will be presented together with a brief introduction to x-radiation protection practices. Radiographic procedures relating to the upper extremities, chest and abdomen will also be covered.

MRAD 102 Medical Imaging — Introduces students to the standard equipment used in the production of a radiograph. Fundamentals of the photo-recording system are introduced. Also studied are the basic factors of x-ray exposure, transformers, simple electrical controls, x-ray film construction and the various film holders, automatic processing and sensitometry. Laboratory work related to all these subjects is included.

MRAD 103 Radiographic Technique and Evaluation — A systematic review of the radiographic examinations taught in MRAD 101 is carried out. The student evaluates radiographs for image quality, structures demonstrated and technical factors.

MRAD 104/304/404 Radiographic Anatomy and Physiology — In this course a detailed study is made of the human skeleton. The body organs, glands, vessels and nerves are studied according to region. Throughout the course, the emphasis is upon surface anatomy, the radiographic appearance of structures, and the details of structure and function which are pertinent to radiographic procedures. Prerequisite: BHSC 113.

MRAD 106 Clinical Experience — Students are orientated to the clinical area and gain experience in basic radiographic positioning and techniques relating to the chest and abdomen, as well as preparation of contrast media.

MRAD 206 Clinical Experience — The student will gain practical experience in the clinical area in basic radiographic positioning of the upper and lower extremities, chest and abdomen.

MRAD 301 Radiographic Positioning — The radiographic procedures related to the vertebrae and thoracic cage are studied, including the radiography of the digestive, urinary and biliary systems. Five hours each week in the x-ray laboratory allow the student to practice positioning and x-ray the phantoms in the areas covered in class. Prerequisite: MRAD 101.

MRAD 302 Quality Assurance — Covers all aspects of a hospital quality assurance program including: processor monitoring, darkroom problems, x-ray unit monitoring and various tests used to detect equipment problems.

MRAD 303 Radiographic Technique and Evaluation — A systematic review of the radiographic examinations taught during MRAD 301. The student evaluates radiographs for positioning, image quality, structures demonstrated and technical factors.

MRAD 305/405 Case Studies — Designed to provide the bridge between classroom theory and clinical work. Working in groups, a case study is presented and students will discuss all aspects of the case including the anatomy and physiology, positioning, radiation protection, imaging and equipment issues, technique and patient care. Students will have the opportunity to develop analytical and planning skills in a laboratory setting.

MRAD 306 Clinical Experience — Students will gain practical experience in the following areas: upper or lower extremity (trauma patient), non-ambulatory chest with I.V. or drainage, non-traumatic vertebra, routine fluoroscopy and routine I.V.P.'s.

MRAD 307 Pathology — Students are introduced to pathologic terminology and the basic mechanisms underlying disease processes. The balance of the course deals with pathological conditions of bone. Laboratory sessions allow students to become familiar with the radiographic appearance of some of the more common bone pathologies.

MRAD 401 Radiographic Positioning — The skull is studied in detail with special emphasis on acquiring the necessary positioning skills. Students are expected to reinforce the classroom material in the x-ray laboratory. Prerequisite: MRAD 201.

MRAD 402 Medical Imaging — Rectification, control circuits, mobile units, serial radiography, x-ray tubes, image amplifiers, C.C. television, videorecording and body section radiography comprise the apparatus studied in this course. The image recording portion covers special processes, artifacts and image presentation. The basics of digital image processing technology are introduced including digital angiography, subtraction technique, C.T. scanning and magnetic resonance imaging.

MRAD 403 Radiographic Technique and Evaluation — A systematic review of the radiographic examinations taught during MRAD 401 is carried out during Level 4. The student evaluates radiographs for positioning, image quality, structures demonstrated and technical factors.

MRAD 406 Clinical Experience — The student will gain practical experience in the following areas: skeletal radiography; trauma vertebra; fluoroscopy examinations; horizontal beam procedures; injectable contrast exams and mobile exams.

MRAD 407 Pathology — This course, which follows MRAD 307, deals with pathological conditions affecting the remainder of the body. The student is also made aware of how pathology will affect technical factors used in the production of a diagnostic radiograph. Laboratory sessions allow the student to become familiar with the radiographic appearance of some of the more common pathologies.

MRAD 408 Radiation Biology and Protection — The student is reintroduced to the basic interactions of radiation with matter. An in-depth study of intracellular responses to radiation is made. The latter part of this course deals with radiation pathology and human experience with radiation injury. The aims and objectives of radiation protection are discussed, as well as the various organizations responsible for establishing protection standards. The course then deals with regulations governing the use of diagnostic radiation and methods of reducing exposure to the patient, the technologist and fellow workers.

MRAD 409 Specialized Procedures — Includes discussion of the specialized radiographic procedures utilized to demonstrate the vascular tree, the central nervous system and the digestive, biliary and genito-urinary tracts. Also included is a brief discussion of pediatric radiography and C.T. scanning.

PHYS 109 Physics for Medical Radiography — An introductory course which emphasizes the application of physical phenomena in medical radiography. It includes the structural and physical properties of matter, static electricity, direct and alternating current, magnetism, mechanics, energy, wave motion, sound, thermodynamics, optics, quantum concepts, production of x-rays, interaction of x-rays with matter, radioactivity, x-ray tubes, radiation detection and the basics of digital radiography.

PHYS 309 Physics for Medical Radiography — See PHYS 109.

Nuclear Medicine

Nuclear medicine is the application of radioactive materials to the diagnosis and management of disease in humans. It is primarily a diagnostic specialty and one of the most challenging and exciting branches of medicine.

Radioactive atoms are chemically identical to stable atoms of the same species and can be introduced into the basic chemical structure of many compounds. The radiation that is emitted from the radioactive atoms in the compound permits the detection and measurement of the compound even within the human body. This provides a means of investigating normal and abnormal functions of specific chemical and physiological processes within a human being while those processes are going on. Virtually all physiological processes within the body are now measurable and can be "seen" using radio compounds and sophisticated instrumentation. Nuclear technology is also employed to assay the extremely small concentrations of certain substances in blood plasma and other body materials.

Nuclear medicine is responsible for a host of revolutionary, safe, non-invasive diagnostic procedures that are now available to physicians in all branches of medicine.

Job Opportunities

A nuclear medicine technologist performs the diagnostic procedures of nuclear medicine. Certified graduates work primarily in the nuclear medicine departments of hospitals. In addition to performing a wide variety of tests on patients, the technologist may also perform lab tests on patients' samples, prepare radiopharmaceuticals for injection into patients, record test results, receive, handle, record, store and measure radioactive materials and perform quality control procedures on a wide variety of instrumentation and imaging devices.

The Program

Designed to prepare graduates to function as technologists in nuclear medicine departments, the program is a combination of lecture and lab instruction at BCIT and clinical experience in the nuclear medicine departments of clinical facilities presently affiliated with the program.

The student will spend terms 1 and 2 of first year at BCIT for lectures and labs in basic subjects applicable to nuclear medicine technology and patient care. The Institute is equipped with a lab containing facilities and equipment commonly used in nuclear medicine departments. The student spends the summer term of first year in the nuclear medicine department of a hospital.

In the second year at BCIT, the student spends alternate weeks at BCIT and the nuclear medicine department of one of the Lower Mainland hospitals. The summer term of second year is spent in a nuclear medicine department gaining further clinical experience.

On successful completion of the two year (six term) program, the student receives the BCIT Diploma of Nuclear Medicine Technology and is eligible to write national certification examinations.

Post-graduation

Graduates of the BCIT program are eligible to take the National Certification Examinations set by the Canadian Association

of Medical Radiation Technologists. Successful candidates may use the designation R.T. (N.M.) after their names and work as registered nuclear medicine technologists anywhere in Canada or in many parts of the world. An Advanced Certification is available.

Prerequisites

Algebra 12, Chemistry 11 and 12 and one other science 11 are course requirements for this program. Applicants must be competent in oral and written English. Preference is given to those applicants who have Physics 11. Since the work is highly technical and exacting, the student must feel comfortable with complex instruments, possess considerable manual dexterity and have meticulous work habits. Applicants must have a strong sense of responsibility and a desire to work with patients of all age groups. Nuclear Medicine technology is open to men and women.

A preadmission interview is conducted by members of the Nuclear Medicine Technology program faculty who will assess applicants' suitability for the field and their communication skills. Applicants must undergo a medical examination by their own physician and have a complete updating of immunizations. Applicants selected for the program are required to complete the St. John Ambulance Safety Oriented First Aid course "Emergency First Aid" or its equivalent, prior to admission or during the first term of the program.

PROGRAM: Nuclear Medicine Technology

Level 1		Credit
BHSC 106	Anatomy and Physiology	4.0
BHSC 126	Basic Medical Microbiology and Immunology	2.0
CHEM 106	Chemistry for Nuclear Medicine Technology 1	6.0
MATH 174	Basic Technical Mathematics for Nuclear Medicine	5.0

NMED 409 Clinical Experience in Diagnostic Procedures	*32.5
* NMED 209 and 409 combined, generate 32.5 credits	

Note: All courses have a 60% pass level.

Course Descriptions

BHSC 106 Anatomy and Physiology — An examination of human structure and function based on a systems approach. Included are basic cytology and histology, and the endocrine, nervous and skeletal systems. Remaining systems are covered in BHSC 206.

BHSC 126 Basic Medical Microbiology and Immunology — Deals with basic properties of medically important micro-organisms, the communicability of infection, host-parasite relationships, methods of destruction and control of micro-organisms, with particular attention to the safe preparation of radio pharmaceuticals used for injection. The course also deals with basic immunologic concepts including their related in-vitro applications.

BHSC 206 Anatomy and Physiology — This is a continuation of BHSC 106 and covers the cardiovascular, lymphatic, respiratory, digestive, urinary and reproductive systems. Emphasis is placed on homeostatic control systems. Prerequisite: BHSC 106.

BHSC 306 Pathophysiology — An introduction to the principles of pathology based on a disease process approach. Some systems pathology commonly investigated by nuclear medicine procedures is discussed along with some complex

patterns of disease. Prerequisite: BHSC 206.

BHSC 439 Human Behavior — An introduction to the basics of the psychological and social environment of health care organizations, with the aim of understanding how communication affects task activities.

CHEM 106 Chemistry for Nuclear Medicine Technology 1 — This course covers basic general chemistry. It includes stoichiometry, nomenclature, concentrations of solutions (molarity, molality, equivalent weight, PPM, percent), acid-base chemistry (strong and weak electrolytes, buffers, hydrolysis of salts) and electrochemistry (oxidation, reduction, voltaic cells, Nernst equation). The laboratory part of the course which runs parallel with the lectures consists of quantitative analysis, both gravimetric and volumetric.

CHEM 206 Chemistry for Nuclear Medicine Technology 2 — Gives an introduction to organic and biochemistry. The naming, properties and main reactions of the major classes of organic compounds are discussed. Coordination compounds are studied with emphasis on the chelating agents used in nuclear medicine. The biochemistry includes both the chemistry and metabolism of fats, proteins and carbohydrates. Lab work includes techniques and synthesis in organic chemistry and biochemical techniques frequently encountered in the clinical lab, e.g.: spectrophotometry, chromatography, electrophoresis. Prerequisite: CHEM 106.

GNNU 181 Patient Care — Assists the student to understand the hospital environment and the health problems of the patient. Emphasis will be placed upon observation and communication appropriate to the nuclear medicine technologist. The nursing lab will be used to practice basic technical skills and procedures required in emergency situations.

HCOM 103 Communication for Health Technologists — Introduces students to the communication needs of the nuclear medicine profession — communicating with supervisors and patients. The course includes organizing and explaining information, objective and subjective descriptions, specialized journal research, information memos and oral briefings. It also covers medical terminology.

HCOM 203 Communication for Health Technologists — A continuation of HCOM 103. The course covers the specific communication tasks required of nuclear medicine technologists: short reports and action memos, persuasive presentations and meetings. It also covers the job package and medical terminology. All assignments are based on nuclear medicine case studies.

MATH 174 Basic Technical Mathematics for Nuclear Medicine — Exponential/logarithmic theory and transformations, common and natural logarithms, logarithmic/semilogarithmic graphs, and exponential growth and decay. Curve stripping, ratio, proportion, and variation. Delta-process, the derivative, differentiation rules including logarithmic and exponential functions, instantaneous rates of change, applied maxima/minima, the differential, antiderivatives, indefinite integral, and definite integral with area under a curve and average value. Differential equations.

MATH 274 Statistics for Nuclear Medicine Technology — Organization and graphical presentation of data, frequency distributions and measures of central tendency and variation. Probability theory and laws. Random variables, mathematical expectation and discrete and continuous theoretical distributions. Estimation and hypothesis testing with both large and small samples. Method of least squares and regression and correlation. Non-parametric statistics.

MLAB 109 Clinical Laboratory Orientation — An introduction to the principles and uses of precision instruments employed in the lab, together with an introduction to hematology pertinent to the nuclear medicine lab.

NMED 107 Radio Assay Procedures — Covers the basic principles of radioassay procedures. A study is made of the components of the test system, the practical aspects of performing the tests and data reduction techniques. The clinical significance of routinely performed assays is discussed.

NMED 204 Applied Physiology — Involves familiarization with affiliated Nuclear Medicine departments of lower mainland hospitals, and a series of lectures given by technologists on the clinical applications of nuclear medicine techniques.

NMED 205 Radiobiology and Protection — A detailed study of ionizing radiation and its interaction with matter. The units and safety guidelines of radiation are also discussed. Emphasis is on the practical applications of radiation safety in the working environment.

NMED 207 Radiopharmaceuticals — A study of the preparation and quality control of radiopharmaceuticals in routine use. Emphasizes the radio-nuclide generator. Dosage forms and calculation and dispensing of doses are covered, together with the clinical application of various radiopharmaceuticals.

NMED 209 Clinical Experience in Diagnostic Procedures — These courses require full-time attendance in the nuclear medicine department of an affiliated hospital. The purpose is to further develop the skills necessary for students to function safely and adequately in a nuclear medicine lab. Hands-on experience will be gained in all aspects of "in vitro" and "in vivo" procedures.

NMED 304 Applied Physiology — The student is instructed in all aspects of current applied physiology including criteria, methodology, instrumentation, patient problems and approach, data collection and manipulation.

NMED 305 Clinical Experience in Diagnostic Procedures — See NMED 209.

NMED 308 Imaging — Designed to familiarize Nuclear Medicine Technology students with the many methods and materials used to visually display the spatial distribution of radioactivity in nuclear imaging procedures. The utilization of optical, photographic, video tape and computer visual displays will be covered in theory and practice.

NMED 404 Applied Physiology — A continuation of NMED 304. The student is instructed in all aspects of current applied physiology including criteria, methodology, instrumentation, patient problems and approach, data collection and manipulation.

NMED 405 Clinical Experience in Diagnostic Procedures — See NMED 209.

NMED 409 Clinical Experience in Diagnostic Procedures — See NMED 209.

PHYS 105 Basic Physics for Nuclear Medicine Technology — A special introductory level course covering topics of forces and motion, energy, static electricity, DC electricity, magnetism, AC electricity, atomic structure, nuclear structure and nuclides.

PHYS 205 Radioactivity and Instrumentation — The theory portion of this course includes topics on nature and production of x-rays, measures of radioactive decay, modes of decay, and interaction of radiation with matter and nuclear reactions. The measurement portion of the course concentrates on instrumentation. Topics include an in-depth study of scintillation-type detector systems and Anger-type gamma cameras.

PHYS 305 Radioactivity and Instrumentation — Continues the instrumentation work begun in PHYS 205. Topics include sensitivity and resolution in scanning, collimators, liquid scintillation counting, G.M. detectors, proportional counters, ionization detectors, semiconductor detectors, TLD, positron scanning and spectrometry.

PHYS 405 Radioactivity and Instrumentation — Completes the instrumentation work begun in PHYS 205 and PHYS 305. Topics include sensitivity and resolution in scanning, collimators, liquid scintillation counting, G.M. detectors, proportional counters, ionization detectors, semiconductor detectors, TLD, positron scanning and SPECT. Includes an introduction to computers and their uses in Nuclear Medicine.

MEDICAL LABORATORY SCIENCE

**Cytogenetics Laboratory
Medical Laboratory Technology**

Cytogenetics Laboratory Technology

Post-Diploma Program

Cytogenetics deals with the study of human chromosomes in health and disease. Cytogenetics Laboratory Technology (CGLT) is the area of specialization in Laboratory Medicine which investigates chromosome banding patterns and chromosome number. It involves the culture of selected cells and their examination to reveal chromosome abnormalities.

Employment Opportunities

Upon graduation and successful completion of the certification exams of the Canadian Society of Laboratory Technologists (CSLT), the CGLT technologist may be employed in cytogenetic laboratories found in larger hospitals throughout Canada.

The Program

The training program is thirteen (13) months in length and consists of a didactic phase of 6.5 months of academic studies at the Institute and a 2 month pre-clinical phase which combines lectures and labs at the Institute with practical experience in an affiliated hospital lab.

This is followed by a 4.5 month clinical phase during which the student will spend all of the remaining time in one of the clinical facilities affiliated with the program.

After successful completion of all three phases, the student is eligible to write the Certification Examinations of the Canadian Society of Laboratory Technologists, which leads to the qualification of Registered Technologist (R.T.) in Cytogenetics, the nationally recognized qualification for employment in the field.

Affiliate Training Facilities

There are three clinical training laboratories affiliated with the CGLT program: B.C. Children's Hospital, Vancouver General Hospital, and the Cancer Control Agency of B.C.

Prerequisites

A B.Sc. in Cell Biology with emphasis on Genetics and Medical Genetics or current registration with the CSLT as a Medical Laboratory Technologist (R.T.) with relevant recent working experience and appropriate academic background.

Starting Date

The Cytogenetic Laboratory Technology program will start on **August 2nd, 1988**. Note that this is an earlier start than most other programs at BCIT.

Course of Studies

		Clrm hrs/wk	Credit
Didactic Phase (28 weeks including exam week)			
*BHSC 104	Anatomy and Physiology	4.0	2.5
*BHSC 121	Introductory Principles of Immunology	5.0	3.5
CGLT 500	Introduction to CGLT	22.0	41.0
*MLAB 100	MLT Fundamentals	10.5	7.0
*MLAB 113	Introductory Hematology	7.0	1.5
			<u>55.5</u>

Pre Clinical Phase (9 weeks)

*CGLT 601	Cytogenetic Laboratory Technology	16.0	9.5
*CGLT 602	Clinical Orientation to CGLT	17.0	<u>10.0</u>
			19.5

Clinical Phase (20 weeks)

Clinical training in an affiliated clinical laboratory.	35.0	40.0
---	------	------

* Course is 10 weeks or less in length.

Course Descriptions

BHSC 104 Anatomy and Physiology — A systematic approach to the study of human anatomy and physiology for medical laboratory and cytogenetics laboratory technology students. The course includes basic cytology and an introduction to the skeletal, muscular, nervous, circulatory, respiratory, digestive, urinary and reproductive systems.

BHSC 121 Introductory Principles of Immunology — A basic course designed to give medical laboratory and cytogenetic laboratory technology students encountering immunology for the first time, a general background in this broad field of study. The course deals with body defenses against disease; types of immunity and their physiological characteristics; biologicals used; nature and function of antigens and antibodies; the basic principles and mechanics of in-vitro immunologic diagnostic tests/hypersensitivities, their characteristics and management; immune deficiency diseases and auto-immunity.

CGLT 500 Introduction to Cytogenetics Laboratory Technology — A comprehensive course with extensive hands-on training, demonstrations, lectures on the principles and methodologies of clinical cytogenetic technology. A wide range of metaphase chromosomes in print and microscopic form are studied to introduce the student to the human chromosome karyotype. The student is introduced to the theoretical and practical aspects involved in cell growth and culture as they relate to the major cytogenetic laboratory procedures. The principles and practical application of various banding techniques are studied as they relate to the major human tissue types. The student is provided with the opportunity to perform all the skills studied, examine the results and prepare a report in preparation for work in the cytogenetics laboratory.

MLAB 100 MLT Fundamentals — An introductory course for medical laboratory and cytogenetic laboratory technology students with emphasis on general techniques, equipment (microscopy, balances and weighing, centrifuges, electrophoresis and chromatography, water purifying equipment, automatic pipettes and diluters, potentiometry); laboratory safety, specimen handling, laboratory math, reagent preparation and other basic knowledge that applies to most medical laboratories. Professionalism, medical terminology and general principles of laboratory policies are also covered.

MLAB 113 Introductory Hematology — This course introduces the student to the origin, development and function of white blood cells. Both theoretical and practical knowledge are introduced.

Pre Clinical Phase (9 weeks)

CGLT 601 Cytogenetics Laboratory Technology — A follow-up to CGLT 500 with students working at BCIT on their technical assignments using their skills in culturing, banding and chromosome analysis to produce a comprehensive report.

CGLT 602 Clinical Orientation to CGLT — In conjunction with CGLT 601, students are required to attend relevant hospital seminars, rounds and in-services. In rotation, each student will spend a portion of their clinical orientation in the Department of Medical Genetics at Grace Hospital to study its role in clinical genetics in the community.

Clinical Phase

The student is given clinical experience under the supervision of a senior technologist and/or instructor at one of the clinical training laboratories affiliated with the CGLT program. The student rotates through the sub-sections of the laboratory to allow direct, hands-on experience on all the major tissues and methodologies operating in the cytogenetics laboratory.

Medical Laboratory Technology

The Medical Laboratory Technologist

The medical laboratory technologist, as a member of the Health Care Team, performs the many, varied and complex laboratory testing procedures on blood samples, tissue specimens and body fluids which are used by physicians as important aids in the diagnosis and treatment of a wide range of medical disorders and conditions. Rapid and continuous advancement in the techniques, procedures and instrumentation involved in the practice of medical laboratory technology make it an ever expanding and challenging field for the technologist.

Employment Opportunities

Medical laboratory technology offers a variety of scientific pursuits within the modern hospital, the private clinic and the research laboratory. These pursuits include Clinical Chemistry, Clinical Microbiology, Hematology, Histotechnology and Immunohematology. The trained Medical Laboratory Technologist may pursue a career in any one or a combination of these fields after training.

The Program

The training program at BCIT is a two year Diploma program consisting of one year of academic studies at the Institute followed by a twelve month clinical training period spent in one of the clinical facilities (hospital or private lab) associated with the program. All participating laboratories are accredited for training purposes conjointly by the Canadian Medical Association and the Canadian Society of Laboratory Technologists. After successful completion of the two year training program, the student is eligible to write the Certification Examinations of the Canadian Society of Laboratory Technologists, which lead to the qualification of Registered Technologist, the nationally-recognized qualification for employment in a Medical Laboratory.

Affiliate Clinical Training Facilities

There are ten clinical training laboratories affiliated with the MLT program. Six of the laboratories are located in the Lower Mainland (Vancouver and surrounding area), three are on Vancouver Island and one is in the Interior of B.C.

Prerequisites

The following First Year University-level courses (or their equivalent in a Community College) are the prerequisites for entry into the Medical Laboratory Technology program:

Biology	UBC 101 or 102
Chemistry	UBC 110 or 120
Physics	UBC 110 or 120
English	UBC 100
Mathematics	UBC 3 credits at the Math 100 level*

*No specific Mathematics courses are recommended. However, a total of 3 UBC credits at the Math 100 level (or its equivalent) are required. Calculus or statistics courses are acceptable. Applicants should be aware that, in the event that their application to the Medical Laboratory Technology is not successful, Calculus courses are required for entry into most second year university science programs.

A complete First Year Science Program, 15 credits at UBC (or its equivalent in a Community College), is required for entry into the program. Applicants who do not have the appropriate courses and credits (or their equivalents) will not be considered eligible.

Color blindness precludes admission to the MLT program.

Final acceptance to the program will be based on the results of a personal interview with senior staff members of one of the affiliated clinical laboratories.

Starting Date and Length of the MLT Program

The Medical Laboratory Technology program will start on **August 2nd, 1988**. Note that this is an earlier start than most of the other programs at BCIT. The academic year will finish at the end of May, 1989. The clinical training year will begin in June 1989 and continue for fifty-two weeks.

Entry into Pre-Clinical Year of the MLT Program

The MLT student must obtain a passing grade in all nine of the MLT **Discipline** courses: Clinical Chemistry, MLAB 103/203; Clinical Microbiology, MLAB 104/ 204; Hematology, MLAB 105/205; Histotechnology, MLAB 126/226; Immunohematology, MLAB 208, in order to continue into the clinical year.

Course of Studies

		Clrm hrs/wk	Credit
Level 1	(20 weeks including exam week)		
BHSC 104	Anatomy and Physiology	4.0*	2.5
BHSC 121	Introductory Principles of Immunology	5.0*	3.5
MLAB 100	MLT Fundamentals	10.5*	7.0
MLAB 103	Clinical Chemistry	8.5	8.0
MLAB 104	Clinical Microbiology	8.5	8.0
MLAB 105	Hematology	7.5*	5.0
MLAB 126	Histotechnology	8.5*	5.5
			39.5

		Clin hrs/wk	Credit
Level 2	(21 weeks including exam week, excluding Spring Break)		
MLAB 203	Clinical Chemistry	9.5	13.0
MLAB 204	Clinical Microbiology	9.0	12.0
MLAB 205	Hematology	7.0	10.0
MLAB 226	Histotechnology	7.5*	3.0
MLAB 208	Immunohematology	8.5	9.5
MLAB 210	MLT Correlation	2.0*	1.0
			48.5

* Course is 10 weeks or less in length.

Year 2

Clinical training in an affiliated clinical facility in the Vancouver area (Lower Mainland), Vancouver Island or the Interior of B.C.

Course Descriptions

BHSC 104 Anatomy and Physiology — A systematic approach to the study of human anatomy and physiology for Medical Laboratory Technology students. The course includes basic cytology and an introduction to the skeletal, muscular, nervous, circulatory, respiratory, digestive, urinary and reproductive systems.

BHSC 121 Introductory Principles of Immunology — A basic course designed to give the Medical Laboratory Technology student encountering immunology for the first time, a general background in this broad field of study. The course deals with body defenses against disease; types of immunity and their physiological characteristics; biologicals used; nature and function of antigens and antibodies; the basic principles and mechanics of in vitro immunologic diagnostic tests; hypersensitivities, their characteristics and management; immune deficiency diseases and auto-immunity.

MLAB 100 MLT Fundamentals — An introductory course for the Medical Laboratory Technology student with emphasis on general techniques, equipment (microscopes, balances, centrifuges, electrophoretic and chromatographic separation equipment, water purifying equipment, automatic pipettes and dilutors, potentiometry); laboratory safety, specimen handling, laboratory math, reagent preparation and other basic knowledge that applies to most medical laboratory departments. Professionalism, medical terminology and general principles of laboratory policies are also covered.

MLAB 103 Clinical Chemistry — An introduction to the various laboratory instruments used in the chemical analysis of biological specimens with emphasis on principles, components, operation and maintenance of these instruments, forms the initial part of this course. The latter and major portion of the course deals with the analysis of various constituents of body fluids including protein and related nitrogenous substances, electrolytes and blood gases, enzymes, carbohydrates and lipids. Emphasis is placed on the metabolism, function, measurement and relationship of the levels of these various substances to disease states.

MLAB 104 Clinical Microbiology — Provides a detailed study of clinical microbiology theory, laboratory methodology and techniques. Emphasis is on understanding the interrelationships between the characteristics of microorganisms, their natural habitats, sources of infection, pathogenicity for man and the detailed methodology used by the clinical laboratory technologist to isolate, identify and test the antibiotic susceptibility of human pathogenic organisms. Through practical labo-

ratory sessions, the student develops the basic skills and understanding required to correctly perform and interpret clinical microbiology tests and procedures

MLAB 105 Hematology — This course is designed to enable the student to become proficient in the manipulative skills required to perform hematological laboratory tests and to acquire the theoretical and practical knowledge to interpret the data resulting from these tests. It provides a detailed study of the origin, development and function of blood and its cellular components; a study of blood diseases and blood coagulation. The theory and practical application of hematological instrumentation is also studied in detail.

MLAB 126 Histotechnology — A detailed study of the theory and practical applications of the techniques used in the histopathology laboratory to preserve and prepare body tissues for microscopic examination and diagnosis. The course is designed to introduce students to the principles of normal histology and microanatomy, to provide the opportunity to perform techniques in current use and to examine the results, to prepare students to work in the histopathology laboratory.

MLAB 203 Clinical Chemistry — See MLAB 103.

MLAB 204 Clinical Microbiology — See MLAB 104.

MLAB 205 Hematology — See MLAB 105.

MLAB 208 Immunohematology — Uses the sciences of genetics and immunology to explore the major antigen systems of human blood. The practical importance of these systems is applied to the technology of blood and blood component transfusion, and the investigation of the immune hemolytic anemias.

MLAB 210 MLT Correlation — The topics discussed in this course will include professionalism, ethics, career prospects available to graduates from this program; laboratory information flow, the fundamentals of laboratory management and organization. Through a short series of case study seminars, the interrelationship between the five major MLT subject areas will be emphasized.

MLAB 226 Histotechnology — See MLAB 126.

NURSING

General Nursing Certificate of Credit in Nursing

General Nursing

Today's registered nurse assists people in meeting health needs in collaboration with other members of the health care team including dietitians, occupational therapists, pharmacists, physicians, physiotherapists and social workers. Demands made upon nursing professionals range from providing information on health concerns to promoting proper health care, preventing disease, providing restorative care and emotional support. Proficiency is required in problem-solving and decision-making and in interpersonal, communicative and psychomotor skills. Although it is a high-stress profession, both men and women find general nursing a rewarding career.

Job Opportunities

Registered nurses are employed in general hospitals and community agencies. Positions for the new graduate are available mainly in medical and surgical units.

The Program

The program is approved by the Registered Nurses' Association of British Columbia. Graduates are eligible to write the registration examinations of the Association. Graduates are prepared for employment in general hospitals or other health care agencies where comparable levels of patient care and nursing judgement are required. The program provides 22 months of instruction during a 2.33 year period. Enrolment in the program is in January or August of each year. The program provides instruction in Nursing, Basic Health Sciences and English. Learning opportunities include: independent study, lectures, laboratories, tutorials, and experience with medical, surgical, obstetrical, pediatric and psychiatric patients and families.

The first year of the program is also offered at 5 access colleges: North Island College; Northwest Community College; Fraser Valley College; East Kootenay College and Northern Lights College. Upon successful completion of the first year, the student automatically transfers to BCIT for the second year. These students may be able to complete Level 5 in their home regions, dependent on such factors as available placements and preceptors.

Independent study is based on printed modules that contain objectives, pre-tests, learning activities, post-tests and reference lists. Students are expected to have completed the module on their own prior to associated classroom or laboratory activities. In the classroom or laboratory, the instructor responds to questions and provides activities designed to assist students to integrate their learning or to apply it to clinical practice. To be successful in modular instruction, students should be self-directed, disciplined and have well-developed reading, study and organization skills. Remedial courses on these skills are available at many post-secondary institutions, particularly the colleges and BCIT. Some high schools offer such courses in their evening programs.

Students will complete a program consisting of five terms. Each term is 17 weeks in length. The fall term extends from mid-August to mid-December and the winter term from Jan-

uary to mid-May. Students are free of studies from mid-May to mid-August.

Admission Requirements

Applicants must have all the admission requirements completed at least one month prior to registration to be eligible for a seat.

A. Applicants under 23 years of age at the time of entry into the program.

1. Senior secondary school graduation, with:
 - a) Chemistry 11 and either Chemistry 12 or Biology 12 (preferred) both with C+
 - b) Algebra 11 with a minimum of C
 - c) English 12 with a minimum of C+.
2. Experience working with patients in a hospital or Extended Care Unit;
or
Full-time/part-time work experience in any field and 30 hours volunteer experience with patients in a hospital or Extended Care Unit;
or
Six months (2-4 hrs per week) volunteer experience with patients in a hospital or Extended Care Unit.
All with satisfactory references.
3. Completion of the immunization program is required before final acceptance into the program.
4. A physical examination by a physician of the applicant's choice, indicating satisfactory health.
5. A satisfactory interview with a member of the General Nursing Department who will assess the applicant's:
 - knowledge and motivation towards a nursing career
 - appreciation of the financial costs of the program
 - appreciation of the stress of the program
 - demonstrated communication skills.

6. A St. John Ambulance standard First Aid certificate or equivalent is required and must be valid for the student's first year in the program.

B. Applicants over 23 years of age at the time of entry into the program.

1. Senior secondary school graduation or equivalent, e.g.: G.E.D. or BTSD, with Chemistry 11 and either Chemistry 12 or Biology 12 (preferred) to be completed within two years prior to enrolment with a minimum of C+ in both courses.
2. Experience as an employee working with patients in a hospital or Extended Care Unit with a satisfactory reference;
or
Full-time or part-time work experience in any field with a satisfactory reference and 30 hours volunteer experience with patients in a hospital or Extended Care Unit with a satisfactory reference;
or
Six months (2-4 hr per week) volunteer work experience with patients in a hospital or Extended Care Unit with a satisfactory reference.
3. Completion of the immunization program is required before final acceptance into the program.
4. A physical examination by a physician of the applicant's choice, indicating satisfactory health.
5. A satisfactory interview with a member of the General Nursing Department, who will assess the applicant's:
 - knowledge of and motivation towards a nursing career
 - appreciation of the financial costs of the program
 - appreciation of the stress of the program
 - demonstrated communication skills.
6. A valid St. John Ambulance standard First-Aid certificate or equivalent is required and must be valid for the student's first year in the program.

Notes:

1. Applications are accepted in October for the following August and January classes. Packages are sent and interviews conducted from February to April. Decisions will be made in May or June for applicants to fill and waitlist both classes.
2. Applicants with baccalaureate degrees within 5 years will be assessed on an individual basis to determine equivalency with academic criteria.
3. C.P.R. (Level C) certificate is prerequisite to Term 4. It must be current during both Terms 4 and 5.

Expenses

In addition to tuition fees, students will spend approximately \$1,000 for textbooks and other learning materials during the program. Uniforms and shoes are about \$250. The student is responsible for transportation to hospitals and other community agencies. It is highly recommended that students have the use of a car two days per week for transportation to these agencies. Most students purchase a graduation pin for approximately \$150.

Financial Assistance

BCIT has a financial assistance program: scholarships, loans and bursaries. Details are available from Student Financial Services in the Counselling department.

Post-graduation

Following completion of the nursing diploma program, students write the Canadian registration examinations in order to obtain the R.N. (Registered Nurse) designation. The fee for these examinations is \$135. After gaining some experience, graduates may elect to undertake one of the many post-diploma programs at BCIT or elsewhere in B.C., Canada or the U.S., to further their knowledge and skills in specialty areas of nursing. Most universities in major cities offer Bachelor of Nursing programs for graduates from diploma programs.

PROGRAM: General Nursing

Level 1	Credit
BHSC 105 Anatomy and Physiology	3.5
BHSC 118 Personal Fitness Management.....	2.0
BHSC 140 Human Development 1	3.5
GNNU 100 Nursing 1: Theory and Clinical	25.0
Level 2	
BHSC 205 Physiology	3.5
BHSC 225 Microbiology	1.0
BHSC 226 Immunology	1.0
BHSC 239 Sociology	1.5
BHSC 240 Human Development 2.....	1.5
GNNU 200 Nursing 2: Theory and Clinical	24.0
Level 3	
GNNU 300 Nursing 3: Theory and Clinical	29.5
HCOM 107 Writing for General Nurses	3.5
Level 4	
GNNU 400 Nursing 4: Theory and Clinical	28.0
HCOM 109 Modern Literature for General Nurses.....	3.5
Level 5	
GNNU 450 Nursing 5: Theory and Clinical	42.0

Course Descriptions

BHSC 105 Anatomy and Physiology — A survey of the basic structure and function of human body systems. An introduction to the basic principles of genetics is also included.

BHSC 118 Personal Fitness Management — A combined theory and practice course designed to emphasize the relationship of physical fitness to lifestyle patterns. The focus is placed on the student's own activity pattern.

BHSC 140 Human Development — After an initial treatment of the topic of death and loss, this course focuses on the processes of growth and development from conception through adolescence. Physical, cognitive, affective and social development are surveyed with emphasis on relating developmental concepts to health care.

BHSC 205 Physiology — A study of physiological regulation and control based on the fundamentals established in BHSC 105. Prerequisite: BHSC 105.

BHSC 225 Microbiology — Provides an introduction to basic microbiological concepts, including the distinguishing characteristics of micro-organisms, methods of controlling infectious diseases and host-parasite relationships. Prerequisite: BHSC 105.

BHSC 226 Immunology — Provides an understanding of the immune response as applied to immunity, surveillance, homeostasis, hypersensitivity, autoimmunity and immunohematology. The course progresses from discussions on the components and biological activities of the immune response to the immune response role in protective as well as disease conditions. Prerequisite: BHSC 105, BHSC 225.

BHSC 239 Sociology — An introduction to the study of human behavior. Basic terminology and concepts of sociology are presented. Emphasis is placed on the study of the family as a social institution, as well as on other forms of group processes and collective behavior. The relationship between behavioral sciences and problems of health care is examined.

BHSC 240 Human Development 2 — Focuses on growth and development from young adulthood to aging adult. Physical, cognitive, affective and social development are surveyed. Emphasis is placed on relating developmental concepts to health care. Prerequisite: BHSC 140.

GNNU 100 Nursing 1: Theory and Clinical — An overview of the nursing curriculum and the study of individuals of adult age who require minimal or no assistance to satisfy needs. Emphasis is placed on the normal requirements for need satisfaction and the stressors associated with lifestyle patterns. The student is introduced to the basic concepts of the nursing process; psychomotor skills, interactive skills and the helping relationship; organization and responsibilities of the professional nurse. Concurrent theory, laboratory and clinical practice focus on basic assessment, interactive and psychomotor skills. Clinical experience is provided in acute and extended care units and community agencies.

GNNU 200 Nursing 2: Theory and Clinical — The study of individuals of adult age who require assistance to satisfy their needs. Emphasis is placed on stressors associated with selected stages and tasks of growth and development, and selected unanticipated events related to inflammatory disorders. The student will use selected interactive skills to initiate, maintain and terminate a helping relationship with patients. Concurrent theory, laboratory and clinical practice will focus on the nursing skills required to assist individuals to satisfy needs. Selected pharmacology content is integrated with core content as a therapeutic measure. The surgical patient is discussed to prepare the student for the clinical area. Clinical experience will be provided in hospital settings on adult general surgical units. Community visits will be integrated throughout the course. Prerequisite: GNNU 100, BHSC 105, BHSC 140.

GNNU 300 Nursing 3: Theory and Clinical — The study of individuals of all ages whose responses to stressors may be appropriate or inappropriate. Emphasis is placed on the stressors associated with both selected unanticipated events and with the selected growth and development stages and tasks of childhood and of childbearing. Concurrent theory, laboratory and clinical practice will focus on the nursing skills required to assist individuals to satisfy needs. Selected pharmacology content is integrated with core content as a therapeutic measure. Emphasis is placed on developing selected interactive skills to initiate, maintain and terminate helping relationships with patients and involved family members. Clinical experience is provided in hospitals on family-centered maternity units and pediatric units. Community visits are integrated throughout the course. Prerequisite: GNNU 200, BHSC 205, BHSC 225, BHSC 226, BHSC 240.

GNNU 400 Nursing 4: Theory and Clinical — The study of individuals of all ages with inappropriate responses to stressors. Emphasis is placed on the stressors associated with selected unanticipated events and the stage and tasks of adolescence. Concurrent theory, laboratory and clinical practice focus on the nursing skills required to assist individuals to satisfy needs. Selected pharmacology content is integrated with core content as a therapeutic measure. Emphasis is placed on developing selected interactive skills to initiate, maintain and terminate helping relationships with patients and involved family member(s). Clinical experience is provided in hospitals on psychiatric and general medical and surgical nursing units. Community visits are integrated throughout the course. Prerequisite: GNNU 300, CPR (Basic 1).

GNNU 450 Nursing 5: Theory and Clinical — Term 5 emphasizes the integration of previously presented knowledge and skills. Theory focuses on organizational and leadership skills and the responsibilities of the graduate nurse. Clinical experience is provided in general medical-surgical units. Students are assigned to full-time registered nurses who act as preceptors to the student. During this term, students learn to assume the role of a registered nurse. Prerequisite: GNNU 400, HCOM 107, HCOM 109, BHSC 118, BHSC 239, CPR (Basic 1).

HCOM 107 Writing for General Nurses — Nurses and student nurses spend several hours each day writing: completing assignments, documenting patient care, writing letters and memos, preparing written information for clients, writing procedures, completing reports and preparing oral presentations. This course teaches students the planning, writing and revising skills they need to perform these tasks efficiently and effectively.

HCOM 109 Modern Literature for General Nurses — Presents four genres of modern literature: the short story, drama, the novel and poetry. Students will be encouraged to use the literature, classroom discussions and the assignments as ways of expanding their experience, developing empathy and detachment, clarifying judgement and reflecting on their values and assumptions.

Certificate of Credit in Nursing

The Basic Health Science and English courses of the diploma nursing curriculum are offered through independent study as well as on campus. Applicants who meet the academic entrance requirements may wish to complete some of these courses prior to enrolment to lighten their study loads during the program. Students with lighter loads pay full fees as the nursing courses account for the majority of credits taken each term.

For information write to Health Part-time Studies, BCIT, 3700 Willingdon Avenue, Burnaby, B.C. V5G 3H2. These courses are offered in fall, winter and spring terms.

Faculty and Staff

Mrs. M. Neylan, M.A., B.S.N., R.N., R.P.N.(Honours), Associate Dean

Ms. J. Anderson, R.N., B.Sc.N., M.A. (Education)

Mrs. L. Barratt, B.A., Diploma Psychiatric Nursing, R.N.

Ms. M.J. Belfry, M.Sc., B.N., R.N.
