

Kyle Creek Project

Like a duck on a lake—placid above the water and paddling like heck below—the Kyle Creek project involved more than meets the eye. For most of the campus community, the project involved dredging out the creek near the SAC building. But for Physical Plant and Project Manager, Keith Walker, the project involved widening a walkway into a combination walkway/bikeway connecting up to a Burnaby-wide trail system. Lighting was increased and the area was landscaped. Underground, a better parking lot drainage system

was created to prevent run-off into the creek. In the area between the SAC and the tennis courts, better lighting was installed, drainage pipes laid and the whole area was landscaped. A brick sidewalk and attractive railings were placed near the pond and on two bridges crossing the creek. And even at the south end of the campus where the creek enters the campus, the outfall was cleaned out and improved. And, as everyone hoped, ducks still call the creek home.
